EXECUTIVE SUMMARY

S.1 Project Synopsis

The proposed project involves a General Plan Amendment (GPA), a Community Plan Amendment (CPA) and the rezone of a 4.09-acre project site and a Disposition & Development Agreement (DDA) and Ground Lease to allow for future residential development on surplus County-owned land to be implemented using future permits issued by the City.

The County's primary objectives for the proposed project are:

1. Establish the ability for residential developers to construct affordable homes on surplus County property, consistent with San Diego regional housing policies.
2. Deliver a development-ready site, including demolition and removal of existing onsite structures and related facilities, and provision of stubbed-out utilities.
3. Encourage an increase in the supply and variety of housing types – affordable for people of all ages and income levels – in an area with existing or planned frequent transit service (i.e., transit priority area) and with access to a variety of public and commercial services.
4. Ensure high-quality development occurs on the site through the development of architectural and landscape supplemental development regulations.

A GPA is proposed to change the project site's underlying land use designation from Commercial Employment, Retail & Services to Residential. The project site is located within the Community Core Community Plan Implementation Overlay Zone (CPIOZ) Area of the larger Clairemont Mesa Community Planning Area. The site is currently designated for Commercial-Community Center and is zoned as Commercial Office (CO-1-2). Under the proposed project, the site's planned land use in the Community Plan would be changed from Commercial-Community Center to Residential-High (45–73 dwelling units per acre [du/ac]). The CPA would allow for a density of up to 448 residential units onsite; however, the DDA would cap the site capacity at a maximum of 404 dwelling units onsite. In addition to changing the site's designated land use and establishing a residential density cap for future development, the proposed CPIOZ Type A (CPIOZ-A) would also set the regulatory framework to guide future infill residential development of the project site (see Appendix B to this EIR).

For consistency with the CPA, the project site would be rezoned from Commercial Office (CO-1-2) to Residential – Multiple Units (medium density) (RM-3-9) (refer to Figure 1-3 and Figure 1-4). The CPIOZ-A supplemental

development regulations would be consistent with the general intent of the RM-3-9 zone as modified by the regulations contained in Appendix B.

To implement the future site redevelopment, the County would enter into a DDA with an affordable housing developer who would be responsible for constructing and operating the residential community. In addition to containing the legal terms and conditions of the County and developer's agreement, the DDA would set the scope of the development, including the capacity of the site at 404 affordable dwelling units, and require the developer to secure any necessary approvals from the City of San Diego or any other governmental agency affected by the construction and development. In addition to the DDA, the County would maintain ownership of the project site and issue a 99-year ground lease to the residential developer or their successors in interest.

The County proposes to deliver a development-ready site to a residential developer for the future development of an affordable housing community. To facilitate the future development of the site, all existing onsite structures would be demolished and removed by the County (or a contractor hired by the County through an approved Demolition Contract). Any required soil remediation would be completed following demolition activities and before grading is complete.

S.1.1 Project Location and Setting

The 4.09-acre project site is located in the Clairemont Mesa community, located at 5255 Mount Etna Drive. The project site contains buildings from the former San Diego County Regional Crime Lab (Crime Lab) facility and associated parking and landscaping. Existing onsite buildings include a one-story 66,000 square foot facility and a two-story 36,000 square foot building. The Crime Lab operations relocated from the project site to the County Operations Center complex in Kearny Mesa in 2018 and the property is currently vacant with the exception of some minimal onsite storage.

The site is surrounded by residential, office, and commercial land uses. Immediately to the west of the site are residential neighborhoods and an SDG&E easement. Approximately half a mile south of the project site is High Tech High Mesa, which is a public charter school. The project site is located near the intersection of two major arterial roads, Genesee Avenue and Mount Etna Drive. The Montgomery Field Airport is located approximately 2 miles to the east of the project site. The surrounding geographical features, according to the USGS, include Soledad Mountain 4.5 miles to the west, San Clemente Canyon 2 miles to the north, and Murphy Canyon 3.7 miles to the east.

Areas surrounding the project site, are mostly developed with residential, commercial, and office uses. The surrounding commercial development adjacent to and south of the project site includes the Balboa Towers, which are two medical

buildings that are seven and ten stories in height. In addition, one-, two-, and three-story commercial buildings are located north and east of the project site.

S.2 Summary of Impacts

The analysis contained in the EIR uses the words “significant” and “less than significant” in the discussion of impacts. These terms specifically define the degree of impacts in relation to thresholds used to determine significance of impact identified in each environmental impact section of this EIR. Significant impacts are those adverse environmental impacts that meet or exceed the significance thresholds. As required by CEQA, mitigation measures have been included in this EIR to avoid or substantially reduce the level of significant impacts.

Chapter 2 of the EIR provides discussions of those issue areas for which project implementation would result in either (1) significant impacts that cannot be avoided and/or (2) significant impacts that can be avoided, reduced, or minimized through mitigation measures that would be implemented by the proposed project. The sections with mitigation include Sections 2.1, Air Quality; 2.2, Hazards and Hazardous Materials; 2.3, Noise and Vibration; and 2.4, Transportation and Traffic.

Transportation and Traffic would result in significant and unavoidable impacts. Air Quality, Hazards and Hazardous Materials, Noise and Vibration, and Transportation and Traffic include mitigation that would reduce project impacts to less than significant but not eliminate all of the project’s impacts.

Chapter 3 of the EIR discusses effects that were identified as not to be significant. These sections include Sections 3.1, Aesthetics; 3.2, Energy; 3.3, Greenhouse Gas Emissions; 3.4, Land Use and Planning; 3.5, Population and Housing; 3.6, Public Services; 3.7, Recreation; and 3.8, Utilities and Service Systems.

Table S-1 summarizes the results of the environmental analysis completed for the project. Table S-1 also includes mitigation measures proposed to reduce or avoid the environmental effects, with a conclusion as to whether the impact has been mitigated to below a level of significance.

**Table S-1
Summary of Impacts and Mitigation Measures for the Proposed Project**

Environmental Impact	Mitigation Measures	Significance Determination after Mitigation
Air Quality		
<p>Impact AIR-1: Health risk for residential receptors would exceed the SCAQMD significance threshold of 10-in-one million for residential receptors associated with both future building construction and site demolition and preparation for the proposed project.</p>	<p>AIR-1: Construction Equipment The project shall require all off-road diesel equipment greater than 50 horsepower (hp) used during construction activities to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a CARB-certified Level 3 Diesel Particulate Filter or equivalent.</p>	Less than Significant
Hazards and Hazardous Materials		
<p>Impact HAZ-1: Due to removal of the UST and potential to encounter contaminated media, including asbestos and lead materials, the proposed project would handle hazardous materials within a quarter-mile of a school.</p>	<p>HAZ-1: Soil Contamination, Lead, and Asbestos Recommendations Demolition of the existing building and construction of the future development shall follow the findings and recommendations of the Phase I ESA, including: In future development of the project site, preparation and implementation of a soil management plan shall be used during construction activities near areas of known contamination. Where contamination is known or suspected, and where grading or other soil disturbance activities could encounter contaminated media, undocumented USTs, or other unknown contamination or hazards, implementation of a soil management plan provides protocols to address hazardous conditions, if encountered, in accordance with local, state, and federal regulations. Soil sampling shall be performed at the time of the UST removal to evaluate whether an unauthorized release has occurred. A worker health and safety plan shall be prepared and implemented. Asbestos-containing materials and lead-based paint shall be evaluated prior to razing of the site building.</p>	Less than Significant
<p>Impact HAZ-2: Due to the potential for lane closures during construction of the future development, the proposed project could temporarily interfere with emergency access.</p>	<p>HAZ-2: Traffic Control Plan Prior to the start of construction of the future development, the construction contractor shall prepare a Traffic Control Plan satisfactory to the City Engineer. The Traffic Control Plan shall show all signage, striping, delineated detours, flagging operations, and any other devices that will be used during construction to guide motorists, pedestrians, and bicyclists through the construction area and allow for adequate access and circulation to the satisfaction of the City Engineer. The Traffic Control Plan shall be prepared in accordance with the City's traffic control guidelines and shall be prepared to ensure that emergency access will be continuously provided.</p>	Less than Significant

Environmental Impact	Mitigation Measures	Significance Determination after Mitigation
<p>Impact HAZ-3: The project site is listed on several database searches pursuant to Government Code Section 65962.5 and includes areas of known previous contamination. Grading and other soil disturbance activities could encounter contaminated media or other unknown contamination or hazards.</p>	<p>Refer to HAZ-1 and HAZ-2 above.</p>	<p>Less than Significant</p>
Noise and Vibration		
<p>Impact NOI-1: A temporary increase in ambient noise levels above existing (ambient) conditions at off-site sensitive receivers during construction of the future residential housing project would occur (during both construction of the future development and during site demolition and preparation activities), and impacts would be considered significant.</p>	<p>NOI-1: Construction Noise</p> <p>The following construction noise abatement techniques shall be implemented by the construction contractor to reduce construction-related noise to less than a 10 dBA increase in existing ambient noise levels at nearby noise-sensitive receivers:</p> <p>Temporary noise barriers shall be placed to block the line-of-sight between construction equipment operation and the residential land uses in proximity to the proposed project's property line to the north and west. One of the following two options shall be implemented by the construction contractor:</p> <ol style="list-style-type: none"> a. A temporary noise barrier shall be placed along the entire western property line of the project site and approximately 50 feet to the north from the northwestern corner at a height of 14 feet with noise blankets capable of achieving sound level reductions of at least 8 dBA to block the line-of-sight between construction equipment operations and the offsite noise-sensitive receivers to the south and southwest; <u>or</u> b. A temporary 50-by-50-foot "L-shaped" noise barrier shall be constructed for each small construction area at a height of 14 feet with noise blankets capable of achieving sound level reductions of at least 8 dBA to block the line-of-sight between construction equipment operations and the offsite noise-sensitive receivers. 	<p>Less than Significant</p>

Environmental Impact	Mitigation Measures	Significance Determination after Mitigation
Traffic and Transportation		
<p>Impact TIA-1: Existing plus Project The proposed project would result in significant direct impacts at the following two study intersections and one study roadway segment:</p> <p>Intersections:</p> <ul style="list-style-type: none"> 9. Mount Everest Boulevard & Balboa Avenue (Access Options 1 and 3) 10. Genesee Avenue & Balboa Avenue (Access Option 3) <p>Roadway Segments:</p> <ul style="list-style-type: none"> 11. Balboa Avenue, between Cannington Drive and Charger Boulevard (all access options) 	<p>TRA-1: Mount Everest Boulevard & Balboa Avenue Intersection Modifications (Access Options 1 and 3) Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the restriping of the northbound and southbound approaches on Mount Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing, satisfactory to the City Engineer. Aesthetics		
<p>Implementation of the proposed project would not result in significant aesthetic impacts.</p>		
Energy		
<p>Implementation of the proposed project would not result in significant energy impacts.</p>		
Greenhouse Gas Emissions		
<p>Implementation of the proposed project would not result in significant greenhouse gas emissions impacts.</p>		

Environmental Impact	Mitigation Measures	Significance Determination after Mitigation
Land Use and Planning		
Implementation of the proposed project would not result in significant land use and planning impacts.		
Population and Housing		
Implementation of the proposed project would not result in significant population and housing impacts.		
Public Services		
Implementation of the proposed project would not result in significant public services impacts.		
Recreation		
Implementation of the proposed project would not result in significant recreation impacts.		
Utilities		
Implementation of the proposed project would not result in significant utilities impacts.		

S.3 Areas of Controversy

The original Notice of Preparation (NOP) was distributed on September 10, 2018 for a 30-day public review and comment period, which was extended to October 19, 2018 to allow for a second scoping meeting closer to the project site and more accessible to community members. Public comments were received on the NOP for this EIR and reflect concern or controversy over several environmental issues.

Additionally, two scoping meetings regarding the proposed project were held. The first public scoping meeting was held on Tuesday, September 25, 2018 from 6:00 p.m. to 8:00 p.m. in the Commons at the County Operations Center located at 5520 Overland Avenue, San Diego, CA 92123. A second public meeting was held on Monday, October 15, 2018 from 6:00 p.m. to 8:00 p.m. in the Auditorium at the Marston Middle School located at 3799 Clairemont Drive, San Diego, CA 92117. A number of comment forms were collected from that meeting, as well as subsequent comments via e-mail or mail. A total of 293 communications were received on the NOP from state agencies, groups and organizations, and individuals. State and local agencies include California Department of Transportation (Caltrans), San Diego Association of Governments (SANDAG), and Clairemont Town Council. Groups and organizations include the Clairemont Coalition on Homelessness and Clairemont Cares.

Issues raised at the scoping meetings and from the NOP comment letters include concerns regarding the following issue areas: aesthetics and community character; air quality, noise and traffic impacts to surrounding communities; population and housing with regard to increased density of the proposed project; availability of public services and utilities to support additional residential density; lack of recreational opportunities within the local community; and potential increase in crime and hazards to future residents due to lack of adequate evacuation routes.

Issues raised within these letters are evaluated in this EIR in Chapters 2.0 through 4.0.

S.4 Issues to be Resolved by the Decision-Making Body

An EIR is an informational document intended to inform the public agency decision makers and the public of the significant effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the proposed project. The lead agency (in this case the County) must respond to each significant effect identified in this EIR by making “Findings” for each significant effect. The issues to be resolved include whether or how to mitigate the associated significant effects, including whether to implement a project alternative, the determination of which is to be made by the decision makers. Preparation of a Statement of Overriding Considerations (explaining the

overriding value of the Project despite adverse effects) would be required for any remaining significant and unmitigated impacts.

Issues to be resolved that are directly related to the proposed project include the choice among alternatives and whether or how to mitigate the significant effects. In addition, the County must determine whether any of the Project alternatives would substantially reduce significant effects while still meeting key Project objectives.

S.5 Analysis of Alternatives

S.5.1 Project Alternatives

CEQA requires an EIR to consider a reasonable range of potentially feasible alternatives that would lessen significant impacts identified with the Proposed Project and to foster informed decision making. Chapter 4.0 of this EIR considers a No Project/No Redevelopment alternative, No Project/Existing Community Plan and Zoning alternative, Reduced Intensity Project alternative.

The No Project/No Redevelopment Alternative would not require a Community Plan Amendment (CPA) and rezone from the City of San Diego and the existing vacated San Diego County Regional Crime Lab (Crime Lab) facility would remain on the project site. None of the proposed building demolition (i.e., 103,500 square feet [SF]) would occur and the project site would not be regraded to prepare a developable pad. Affordable housing would not ultimately be constructed under this alternative, further exacerbating the lack of affordable housing in the San Diego County region. The existing structures would remain unoccupied.

The No Project / Existing Community Plan and Zoning Alternative would not require a CPA and rezone and the existing vacated Crime Lab facility would be demolished and the site sheet graded to prepare for future commercial development. Land uses permitted under the Commercial-Community Center designation include shopping areas with retail, service, civic, and offices uses for the community at large. Specifically, the project site is currently zoned Commercial Office (CO-1-2) which is to provide employment uses with limited, complementary retail uses and residential uses as specified, and is intended to apply in large-scale activity centers or in specialized areas where a full range of commercial activities is not desirable (SDMC Section 131.0504). Under this alternative, the project site would be available for sale to a developer for the construction of a commercial office development. This alternative would allow for the future construction of up to 70,000 SF of commercial office development, specifically as medical office use, with supporting retail space, as permitted by the development regulations for the CO-1-2 zone. Any future redevelopment of the project site would undergo review by City staff for compliance with the CMCP Community Core CPIOZ-B requirements related to architectural/site design,

parking design, landscaping, signage and pedestrian/bicycle circulation. Buildings would be limited to 30 feet in height in accordance with the overlay zone in the CMCP.

The Reduced Intensity Project Alternative would result in the same CPA and zone change as the proposed project and the existing vacated Crime Lab facility would be demolished. Under this alternative, the project site would be entitled for the construction of a 312-unit affordable housing project, which would house approximately 633 people. This alternative was developed to reduce the proposed project's direct traffic impacts on roadway segments or intersections by decreasing the unit count to a point where at least one traffic impact would be reduced to less than significant. Reducing units would reduce both the volume of daily trips generated by the site and the number of peak hour trips occurring during the most impacted periods of the day. Under this alternative the permitted unit count would be reduced from 404 units to 312 units. All other aspects of the project would remain the same as the proposed, except that the required amount of parking would be reduced to reflect the lower number of residents.

S.5.2 Environmentally Superior Alternative

A summary of impacts of the alternatives compared to the proposed project is included in **Table S-2**, pursuant to CEQA Guidelines Section 15126.6(d).

CEQA Guidelines Section 15126.6(a) states that an EIR shall describe a range of reasonable alternatives. As evaluated in Chapter 2.0 of this EIR, the significant impacts of the proposed project would affect air quality (construction air toxic emissions); hazards and hazardous materials (USTs and asbestos/lead materials); noise (construction equipment noise); and transportation and traffic (roadway segment and intersection operations). As it would substantially lessen impacts to each of these issue topics to a less than significant level, the No Project Alternative / No Redevelopment Alternative would be the environmentally superior alternative.

However, CEQA Guidelines Section 15126.6(e)(2) also states that if the environmentally superior alternative is the "no project" alternative, the EIR shall also identify an environmentally superior alternative from among the other alternatives. The Reduced Intensity Project Alternative would be the environmentally superior alternative from the remaining alternatives, as it would reduce vehicle trips and avoid significant and unavoidable traffic impacts associated with the proposed project at one roadway segment location in the study area, and it would meet many of the basic project objectives.

**Table S-2
Comparison of Alternatives to the Proposed Project**

Issue Area	Proposed Project Impacts	No Project / No Redevelopment Alternative	No Project/ Existing Community Plan and Zoning Alternative	Reduced Intensity Project Alternative
2.1 Air Quality	SM	LTS	SM(-)	SM
2.2 Hazards and Hazardous Materials	SM	LTS	SM	SM
2.3 Noise and Vibration	SM	LTS	SM	SM
2.4 Transportation and Traffic	SU	LTS	SU(+)	SU(-)

LTS = Less than significant
 SM = Significant and mitigated
 SU = Significant and unavoidable
 (-) Impacts would be less than those of the proposed project
 (+) Impacts would be greater than those of the proposed project

CHAPTER 1.0 PROJECT DESCRIPTION, LOCATION, AND ENVIRONMENTAL SETTING

1.1 Project Objectives

This chapter describes the proposed Mount Etna Community Plan Amendment (CPA) and Rezone Project (referred to herein as the “proposed project”). The proposed project is located in the Clairemont Mesa Community Planning Area, in the City of San Diego (City). This chapter also includes a statement of project objectives, a general description of project characteristics and the environmental setting, the precise location and boundaries of the proposed project, and a statement describing the intended uses of this Draft Environmental Impact Report (EIR).

The San Diego County Board of Supervisors authorized the San Diego County Department of General Services to identify surplus County-owned property for the purpose of leasing the property to residential developers through a competitive procurement process. The underlying purpose of the proposed project is to provide a site for affordable housing and related support services in close proximity to transit, commercial centers, and existing public services. The County of San Diego Department of General Services has identified the project site as a surplus County property that meets these general criteria.

California Environmental Quality Act (CEQA) Guidelines Section 15124 requires an EIR to include a statement of objectives sought by the proposed project. The following specific objectives for the proposed Mount Etna CPA support the underlying purpose of the project, which is to assist the County in developing a reasonable range of alternatives to evaluate in this Draft EIR and aid in the preparation of findings and overriding considerations, if required, in accordance with CEQA Guidelines Section 15091.

The County’s primary objectives for the proposed project are:

1. Establish the ability for residential developers to construct affordable homes on surplus County property, consistent with San Diego regional housing policies.
2. Deliver a development-ready site, including demolition and removal of existing onsite structures and related facilities, and provision of stubbed-out utilities.
3. Encourage an increase in the supply and variety of housing types – affordable for people of all ages and income levels – in an area with existing or planned frequent transit service (i.e., transit priority area) and with access to a variety of public and commercial services.

4. Ensure high-quality development occurs on the site through the development of architectural and landscape supplemental development regulations.

1.2 Project Description

The proposed project involves a General Plan Amendment (GPA), a CPA and the rezone of a 4.09-acre project site to allow for future residential development on surplus County-owned land to be implemented using future permits issued by the City. The following describes the various components of the project that implement the project's objectives described above.

1.2.1 Project Components

The 4.09-acre site's regional location and project vicinity are shown in **Figure 1-1** and **Figure 1-2**. The existing and proposed Clairemont Mesa Community Plan (CMCP) land use designations are shown in **Figure 1-3** and **Figure 1-4**. Existing and proposed zoning are shown in **Figure 1-5** and **Figure 1-6**.

On December 6, 2018, the City's Planning Commission approved Planning Commission Resolution No. 4979-PC, authorizing the initiation of a CPA to the CMCP and a rezone of the project site, subject to conditions contained within City Planning Report No. PC-18-066. The Resolution No. 4979-PC is contained in Appendix C to this EIR.

1.2.1.1 General Plan Amendment

A GPA is proposed to change the project site's underlying land use designation from Commercial Employment, Retail & Services to Residential as depicted on Figure LU-2 of the General Plan to maintain consistency with the CPA described below.

1.2.1.2 Community Plan Amendment

The project site is located within the Community Core Community Plan Implementation Overlay Zone (CPIOZ) Area of the larger Clairemont Mesa Community Planning Area. The site is currently designated for Commercial-Community Center and is zoned as Commercial Office (CO-1-2) (Figures 1-3 and 1-4). Under the proposed project, the site's planned land use in the Community Plan would be changed from Commercial-Community Center to Residential-High (45-73 dwelling units per acre [du/ac]). The CPA would allow for a density of up to 448 residential units onsite; however, the Disposition and Development Agreement (DDA) described below would cap the site capacity at a maximum of 404 dwelling units onsite. Any future development proposal beyond 404 dwelling units would require a CPA and may be subject to additional CEQA review.

In addition to changing the site's designated land use and establishing a residential density cap for future development, the proposed CPIOZ Type A (CPIOZ-A) would also set the regulatory framework to guide future infill residential development of the project site (see Appendix B to this EIR). The intent of the CPIOZ-A supplemental development regulations is to provide primarily for multifamily housing that would complement the surrounding Community Core and existing single-family residential uses in the project area. Additional uses that would activate the ground floor and provide community benefit for residents and the surrounding community would also be required on site but limited to a building area of 1,500 square feet (SF). In addition to the community space, resident support uses would also be integrated into the residential development on the project site.

The proposed CPIOZ-A would be consistent with the general intent of the RM-3-9 zone as modified by the proposed regulations and any incentives or waivers granted pursuant to Article 3: Supplemental Development Regulations, Division 7: Affordable Housing Regulations of the SDMC and any State allowed density bonus incentives. The supplemental development regulations outline specific requirements for: ground floor uses; building height; building setbacks; landscape/streetscape; building articulation; screening/fencing; residential open space; and environmental protection standards (see Appendix B).

The following is a summary of the key elements of the CPIOZ-A supplemental development regulations, while the details are contained in Appendix B to this EIR.

- Provide for multifamily residential uses that complement the surrounding community core and existing single family residential uses.
- Non-residential ground floor public spaces or uses would be required.
- Maximum building height would not exceed 70 feet above grade, including accessory building features such as parapets, elevator towers, and stairwells.
- Building articulation would be implemented to create visual interest, to enhance the pedestrian experience, to assist in diminishing the overall mass of buildings, and to create variation from an exterior perspective.
- Residential open space would be required including private exterior open space and common space.

1.2.1.3 Rezone

For consistency with the CPA, the project site would be rezoned from Commercial Office (CO-1-2) to Residential – Multiple Units (medium density) (RM-3-9) (refer to Figure 1-3 and Figure 1-4). Under the proposed RM-3-9 zone, 297 multi-family units would be the maximum density allowable on the project site without an affordable housing density bonus. As described above, the CPIOZ-A supplemental

development regulations would be consistent with the general intent of the RM-3-9 zone as modified by the regulations contained in Appendix B.

1.2.1.4 Disposition and Development Agreement and Ground Lease

To implement the future site redevelopment, the County would enter into a DDA with an affordable housing developer who would be responsible for constructing and operating the residential community. In addition to containing the legal terms and conditions of the County and developer's agreement, the DDA would set the scope of the development, including the capacity of the site at 404 affordable dwelling units, and require the developer to secure any necessary approvals from the City of San Diego or any other governmental agency affected by the construction and development. In addition to the DDA, the County would maintain ownership of the project site and issue a 99-year ground lease to the residential developer or their successors in interest.

1.2.1.5 Site Demolition and Preparation

Demolition Phase

The County proposes to deliver a development-ready site to a residential developer for the development of an affordable housing community. To facilitate the future development of the site, all existing onsite structures would be demolished and removed by the County (or a contractor hired by the County through an approved Demolition Contract). Any required soil remediation would be completed following demolition activities.

Demolition of the existing onsite structures, parking areas, landscaping, and associated utilities as part of the proposed project would enable the County to deliver a rough graded pad for future development. All existing underground utilities and storage tanks would be removed during the demolition, and utility connections (i.e., potable water, sewer, electrical, and natural gas) would be stubbed out at the project site boundary to facilitate future site development. Demolition activities are expected to take five months to complete from mobilization to final site clearing.

Demolition would require the following administrative approvals from the County: Debris Management Plan, Haul Route Plan, Asbestos Abatement Plan, Lead Hazards Notification, Stormwater Management Plan and a Site Specific Safety Plan. Specifically, San Diego County Ordinance 9840 requires that a Debris Management Plan be prepared to identify how and where 90 percent of the inert construction and demolition debris, and 70 percent of all other construction and demolition debris would be recycled. Demolition debris recycling would occur either onsite or at an approved offsite location. Refer to Section 3.8, Utilities and Service Systems, for additional discussion of these requirements.

Grading Phase

Once the demolition is complete, the materials removed, and any soil remediation is conducted, the project site would be graded to a rough graded pad with a maximum 2 percent slope to ensure that the pad drains correctly. Once grading is completed, erosion control features, including straw waddles would be installed in accordance with applicable stormwater pollution regulations. Site grading is anticipated to require two weeks to complete.

1.2.1.6 Future Building Construction/Operations

The specific design and development of the project site with an affordable housing community is not part of this proposed project but would be developed in the future by an affordable housing developer who would be engaged with the County through the DDA (as described above). The construction and operation of the residential housing community would be subject to future ministerial permit approvals from the City once the GPA, CPA, and rezone are approved. The future development project would be built as a Leadership in Energy and Environmental Design (LEED) Building Design Silver or equivalent.

Although not part of the proposed project, future residential building construction schedule assumptions have been developed so that the environmental impact analysis (i.e., air quality, GHG, noise) of a reasonably foreseeable project could be completed for this EIR. The analysis presented in this EIR assumes that onsite building construction would begin in March 2021 and be completed by October 2022. It also assumed that residential building occupancy would occur by the end of 2022.

When the design is developed for the future residential development, up to three potential vehicular access options could be allowed from the project site, including but not limited to, the following (as show in **Figure 1-7**):

- A primary access point on Mount Etna Drive which would include a drop-off and delivery area adjacent to the main building entrance (Potential Access Point 1 on the figure);
- A second right-in, right-out only access point to Genesee Avenue, as allowable by the City Engineer (Potential Access Point 2 on the figure); and
- A third right-in, right-out only access point via the San Diego Gas & Electric (SDG&E) easement (located west of the project site) to Balboa Avenue, as allowable by SDG&E and the City Engineer (Potential Access Point 3 on the figure).

The transportation implications of all three residential access options are studied in Section 2.4, Transportation and Traffic, of this EIR.

1.2.2 Technical, Economic, Environmental Characteristics

1.2.2.1 *Technical and Environmental Characteristics*

Technical and environmental commitments are proposed that are both standard construction and operational measures, as well as those associated with the project itself, to minimize the potential adverse effects of implementing the proposed project. The specific design features required of the future residential development are outlined in the CPIOZ supplemental development regulations contained in Appendix B to this EIR. These design features are referenced in the analysis of project impacts contained in Chapters 2.0 and 3.0, as applicable.

1.2.2.2 *Economic Characteristics*

San Diego County is facing a severe housing affordability crisis, particularly for low-income and very low-income households (SANDAG 2018). The project would facilitate future affordable residential development on a County-owned site, serving lower income households as defined by the California Department of Housing and Community Development.

In describing and evaluating a project in an environmental review document prepared pursuant to CEQA statute Section 21082.4, the lead agency may consider specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project and the negative impacts of denying the project. Any benefits or negative impacts considered pursuant to this section shall be based on substantial evidence in light of the whole record. Section 3.5.1.2 of this EIR (Population and Housing) includes a discussion of the negative impacts on the affordable housing supply within San Diego County by not approving the proposed project.

1.3 Project Location

The 4.09-acre project site is located in the Clairemont Mesa community, located at 5255 Mount Etna Drive (Figure 1-2). The site is surrounded by residential, office, and commercial land uses. Immediately to the west of the site is an SDG&E easement, with residential homes located west of the easement. Approximately half a mile south of the project site is High Tech High Mesa, which is a public charter school. The project site is located near the intersection of two major arterial roads, Genesee Avenue and Mount Etna Drive. The Montgomery Field Airport is a public airport located approximately 2 miles to the east of the project site.

1.4 Environmental Setting

1.4.1 Elevation Profile

The topography of the project site can be characterized as flat with no gradient in elevation. The elevation of the project site is 367 feet above mean sea level (AMSL).

1.4.2 Existing Geology and Subsurface Conditions

The entire project site has been previously graded and disturbed during construction of the existing buildings. The project site is underlain by Chesterton-Urban land complex soil type, which is primarily composed of sandy loam and fill materials (USDA 2019). There are no known earthquake faults or unstable slopes onsite. The nearest Alquist-Priolo Fault is the Rose Canyon Fault, which is located approximately 2.3 miles west of the project site.

1.4.3 Existing Onsite and Surrounding Land Uses

The project site contains buildings from the former San Diego County Regional Crime Lab (Crime Lab) facility and associated parking and landscaping. Existing onsite buildings include a one-story 66,000 SF facility and a two-story 36,000 SF building. The Crime Lab operations relocated from the project site to the County Operations Center complex in Kearny Mesa in 2018 and the property is currently vacant with the exception of some minimal onsite storage.

Areas surrounding the project site, are mostly developed with residential, commercial, and office uses. The surrounding commercial development adjacent to and south of the project site includes the Balboa Towers, which are two medical buildings that are seven and ten stories in height. In addition, one-, two-, and three-story commercial buildings are located north and east of the project site. As previously detailed, the 50-foot SDG&E easement is located west of the project site, with single-family residential homes located further west of the easement.

The project site is served by Metropolitan Transit System (MTS) bus routes 27 and 41 with frequent services. The project site is located within a planned (2035) transit priority area (TPA) as identified on the TPA map contained in the SANDAG's San Diego Forward: The Regional Plan (SANDAG 2019). In accordance with Senate Bill (SB) 743, TPA means an area within one-half mile of a major transit stop that is existing or planned.

1.4.4 Existing Electrical Magnetic Fields

The project site is adjacent to a 50-foot wide SDG&E easement (Figure 1-2) with two sets of overhead transmission lines (12 kilovolts [kV], 69 kV, 138 kV, and 230

kV). Extremely low frequency (ELF) electric and magnetic fields (EMF) include alternating current (AC) fields and other electromagnetic, non-ionizing radiation from 1 hertz (Hz) to 300 Hz. Power lines, like electrical wiring and electrical equipment, produce ELF fields at 60 Hz (OSHA 2016). This EIR does not consider EMF in the context of the CEQA analysis of potential environmental impacts because: [1] there is no agreement among scientists that EMF creates a potential health risk, and [2] there are no defined or adopted CEQA standards for defining health risk from EMF. For example, on behalf of the California Public Utilities Commission (CPUC), three scientists who work for the California Department of Health Services (DHS) were asked to review studies by the National Institutes of Environmental Health Sciences Working Group, the International Agency for Research on Cancer, and the British National Radiological Protection Board about possible health problems from electric and magnetic fields from power lines, wiring in buildings, some jobs, and appliances (Neutra et al., 2002). The results of their evaluation noted “important differences between the three DHS reviewers’ conclusions” and made no recommendations about actions to be taken to address potential health risks (*Id.*). However, recognizing that there is a great deal of public interest and concern regarding potential health effects from human exposure to EMF from transmission lines, this document does provide information regarding EMF associated with electric utility facilities and human health and safety. Thus, the EMF information in this EIR is presented for the benefit of the public and decision makers.

1.4.5 History of the Project Site

Prior to being occupied by the Crime Lab, the on-site facilities housed the former Clairemont Hospital that closed in 1988. The County acquired the facility in 1989 and the Crime Lab operated in this facility until it was relocated to the County Operations Center in 2018.

1.5 Intended Uses of the EIR

This EIR is an informational document that will inform public agency decision-makers and the general public of the significant environmental effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project (Section 15121(a)).

The County of San Diego is the project applicant and Lead Agency, and the City is a Responsible Agency, pursuant to the CEQA statute and guideline requirements. Both the County and City will rely upon the certified Final EIR for discretionary actions. This EIR was prepared in accordance with the requirements of the County of San Diego EIR Format and General Content Requirements (County of San Diego 2016), CEQA (California Public Resources Code, Section 21000 et seq.), and the CEQA Guidelines (14 California Code of Regulations (CCR) Section 15000 et seq.). Since the project is located within the

City, the City's CEQA significance determination thresholds are utilized in the impact assessment portion of the EIR contained in Chapters 2.0 and 3.0 (City of San Diego 2016).

An EIR was determined by the County to be the appropriate CEQA document for the proposed project as changes to the General Plan, Community Plan and zoning have been specified at a level of detail that allows for a more specific project-focused review and it would apply to a specific future development on the project site. In response to this environmental determination, a Notice of Preparation (NOP) was released for public review on September 10, 2018 for a 30-day public review period, which closed on October 10, 2018. The NOP public review period was then extended 10 days and closed on October 19, 2018. Two scoping meetings were held (September 25, 2018, and October 15, 2018). Scoping meeting comments and associated comment letters received during the NOP public review period are included as Appendix A to this EIR. The Draft EIR has been assigned Office of Planning and Research, State Clearinghouse number 2018091016. This EIR addresses CEQA-related comments received on the NOP.

The CEQA process provides several opportunities for public input at three points during environmental evaluation: (1) during scoping of an EIR, (2) during public review of the completed Draft EIR, and (3) during public hearings held on the project by decision-making bodies. As part of the preparation of the Draft EIR, the first of these outreach efforts was undertaken as noted above and was completed in fall 2018. The second outreach effort occurred when the Draft EIR was released for public review in September 2019.

This EIR will be made available for review by members of the public and public agencies for 45 days to provide comments "on the sufficiency of the document in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated," as stated in CEQA Guidelines Section 15204. The County will consider written comments received on the EIR in making its decision whether to certify the EIR as complete and in compliance with CEQA, and also whether to approve or deny the project. Environmental considerations and economic and social factors may be weighed to determine the most appropriate course of action. If the EIR is certified and the project approved, agencies with permitting authority over all or portions of the project may use the EIR as the basis for their evaluation of environmental effects of the project and approval or denial of applicable permits.

As a Responsible Agency under CEQA, the City will use the information included in this EIR to consider potential impacts on the physical environment associated with the proposed project. With a recommendation from the City Planning Commission, City Council will consider the certified EIR as part of the GPA, CPA and rezone review and approval process, in accordance with CEQA Guidelines

Section 15096. If the GPA, CPA and rezone are approved by the City Council, the County Board of Supervisors will conduct a public hearing to consider/approve the DDA and Ground Lease for the future residential development.

1.5.1 Matrix of Project Approvals/Permits

Required project approvals are summarized in **Table 1-1**. The County and City are working in conjunction to coordinate the CEQA and project review and approval process. As the designated Lead Agency, the County is responsible for carrying out a portion of the project and preparing this EIR in consultation with the City, as a Responsible Agency. As described above, the decision to approve the proposed project is within the purview of both the County Board of Supervisors and the City Council, as summarized below.

**Table 1-1
Matrix of Project Approvals/Permits**

Permit Type/Action	Approving Agency
Demolition Contract Approval and EIR Certification	County Board of Supervisors
Certified EIR Consideration (Section 15096 of State CEQA Guidelines)	City Planning Commission and City Council
General Plan Amendment, Community Plan Amendment and Rezone Approval	City Planning Commission and City Council
Ground Lease Approval and DDA Approval	County of San Diego Board of Supervisors
Local Coastal Plan Amendment Approval	California Coastal Commission

Any future project specific development review/approval on the site will be conducted by the City. If the future proposed development of the site is consistent with requirements of the amended CMCP, the City review of the future development project will be ministerial in accordance with SDMC Section 112.0501.

1.5.2 Related Environmental Review & Consultation Requirements

The proposed project is located within the City and within the Clairemont Mesa Community Planning Area; therefore, the City is a Responsible Agency under CEQA and will take action on the GPA, CPA and rezone.

Pursuant to California Government Code 65352.3, Native American consultation was initiated on September 28, 2018 and concluded on December 28, 2018. Correspondence related to that consultation process is contained in Appendix J to this EIR.

1.6 Project Inconsistencies with Applicable Regional and General Plans

A number of plans, regulations and ordinances apply to the proposed project and were considered during the preparation of the CPA. In particular, the County General Plan, City General Plan, and CMCP. Other plans and regulations were also reviewed, including the SDMC, Regional Water Quality Control Board's (RWQCB) San Diego Basin Plan, National Pollution Discharge Elimination System (NPDES), San Diego Municipal Storm Water Permit, Regional Air Quality Strategy (RAQS) and the State Implementation Plan (SIP). Additionally, the SANDAG's San Diego Forward: The Regional Plan, Climate Action Plan, and The proposed project's compliance with these plans and ordinances is evaluated throughout the EIR with discussion in Chapters 2.0 and 3.0.

The County is proposing to amend the General Plan, CMCP and rezone the property to allow for residential use of the site and the future development of up to 404 multifamily residential units on the project site, which is currently inconsistent with the residential policies of the CMCP.

1.7 List of Past, Present, and Reasonably Anticipated Future Projects in the Project Area

Cumulative projects in the vicinity of the proposed project were identified through a search of City development applications and ongoing project construction, conducted at the time of the analysis began and the NOP was published in September 2018. These cumulative projects form the setting for the cumulative analysis presented in this EIR. Cumulative projects are summarized in the following **Table 1-2**:

**Table 1-2
Cumulative Projects List**

Project ID	Project*	Address	Project Description	Status
257308	Balboa Restaurant	6395 Balboa Ave	Proposed restaurant with drive-thru to replace existing Valvoline oil changer	Application never submitted.
130696	3023 Bunker Hill	3023 Bunker Hill St	Develop 16 commercial condominiums in an existing building on a 0.45-acre site	Application expired 2008

1. Project Description, Location, and Environmental Setting

Project ID	Project*	Address	Project Description	Status
327976	Jefferson Pacific Beach*	4275 Mission Bay Dr.	Demolish 36,000 SF of retail space and construction of three stories of residential units over ground floor retail and underground parking. Per developer site, 172 apartment units and 14,000 SF of retail space.	Under construction
535100	HTH Clairemont CUP	5331 Mount Alifan Dr	High Tech High is proposing to provide educational services to a maximum of 1,636 students in grades TK-12	Application withdrawn.
—	HTH*	5331 Mount Alifan Dr	High Tech High is proposing to provide educational services to a maximum of 1,110 students in grades TK-12; 9th grade enrollment began in 2018 (100 students)	Project will occur under existing CUP
113039	Balboa Mesa Center	5937 Balboa Ave	Develop 17 residential for rent units (w/affordable units) and 2,095 additional SF of commercial space to the existing commercial building	Application expired
421571	Stevenson Property VTM/SDP	4520 Pocahontas Ave	Develop 52 single family residential units	Constructed and occupied
388165	Mount Acadia CUP TPM*	3560 Mount Acadia Blvd	Demolish an existing commercial building and construct a 59,472 SF residential care facility and a 5,672 SF retail building	Building not yet demolished
489476	The Summit at MB – EOT*	3139 Clairemont Dr	Develop approximately 499 residential units which will replace an existing 323-unit apartment complex.	Building not yet demolished
530427	Fairfield Marriott Suites CDP*	4345 Mission Bay Dr	Demolish existing buildings and develop a 106-unit hotel	Buildings not yet demolished

Project ID	Project*	Address	Project Description	Status
—	Lindbergh-Schweitzer Elementary School*	4133 Mount Albertine Avenue	Relocate existing Kavod Charter School from Cubberley Elementary School to the existing Schweitzer Campus	Under construction through January 1, 2024
—	Clairemont Mesa Community Plan Update	Planning Area	Community Plan Update	Plan update ongoing
—	Morena Pump Station and Pipelines (Pure Water San Diego)	Sherman St., Morena Blvd., Clairemont Dr, Genesee Ave through University City to the NCWRP on Eastgate Mall.	Construction of wastewater treatment plant, two 10.7-mile wastewater pipelines and two 3.5-mile water pipelines	Under construction
—	Mid-Coast Trolley Construction	North of the Old Town Transit Center to UTC Transit Center	Light rail line construction	Under construction
—	Morena Corridor Specific Plan	Western Clairemont Mesa and Linda Vista CPAs	Specific Plan for pedestrian-oriented village with mixed-use and employment adjacent to trolley stations.	Final EIR circulated Feb 2019
—	Montgomery-Gibbs Executive Airport Master Plan	3750 John J Montgomery Dr, San Diego, CA 92123	Airport master plan	NOP of PEIR distributed February 2019
—	Naval Fuel Pipe Relocation	Fuel line extends 17 miles from Naval Base Point Loma to Marine Corps Air Station Miramar	Repair relocation of a section of the Miramar Pipeline	Environmental Assessment under preparation

* Project taken into consideration in the traffic impact analysis based on its ability to affect the project's study area.

1.8 Growth-Inducing Impacts

Pursuant to CEQA Guidelines Section 15126.2(d), the following growth inducement analysis is required:

Discuss ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a waste water treatment plant might, for example, allow for more construction in service areas). Increases in the population may tax existing community services facilities, requires construction of new facilities that could cause significant environmental effects. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

The City General Plan (2008) notes that “population in San Diego will grow whether or not the Draft General Plan is adopted ...” and although a number of the General Plan policies are in place to “... encourage business, education, employment and workforce development ... preserve and protect valuable employment land, especially prime industrial land, from conversion to other uses ... and facilitate expansion and new growth of high quality employment opportunities in the city”, the lack of affordable housing has become a critical issue in the city and region, which may require changes in existing land use designations to provide for additional affordable housing. The General Plan incorporates the previously adopted City of Villages strategy, which notes that a “village” is a place where residential, commercial, employment, and civic uses are present and integrated, and are characterized by compact mixed-use area, that are pedestrian-friendly and linked to the regional transit system (City of San Diego 2008). Based on Government Code Section 65300, the General Plan serves as a comprehensive, long-term plan for physical development of the City and, by definition, is intended to manage and address future growth in the City. Implementation of the City of Villages strategy relies on the future designation and development of village sites through community plan updates or amendments. Future development of the project site would incorporate the City of Villages strategies, allow for affordable infill housing located near existing transit and assist with achieving the City’s Climate Action Plan goals.

The City’s community plans are intended to implement the General Plan. The proposed project would amend the CMCP to allow multifamily residential development of the project site and require development standards to guide future development. The project would also amend the site’s land use designation in the General Plan for consistency with the amended CMCP.

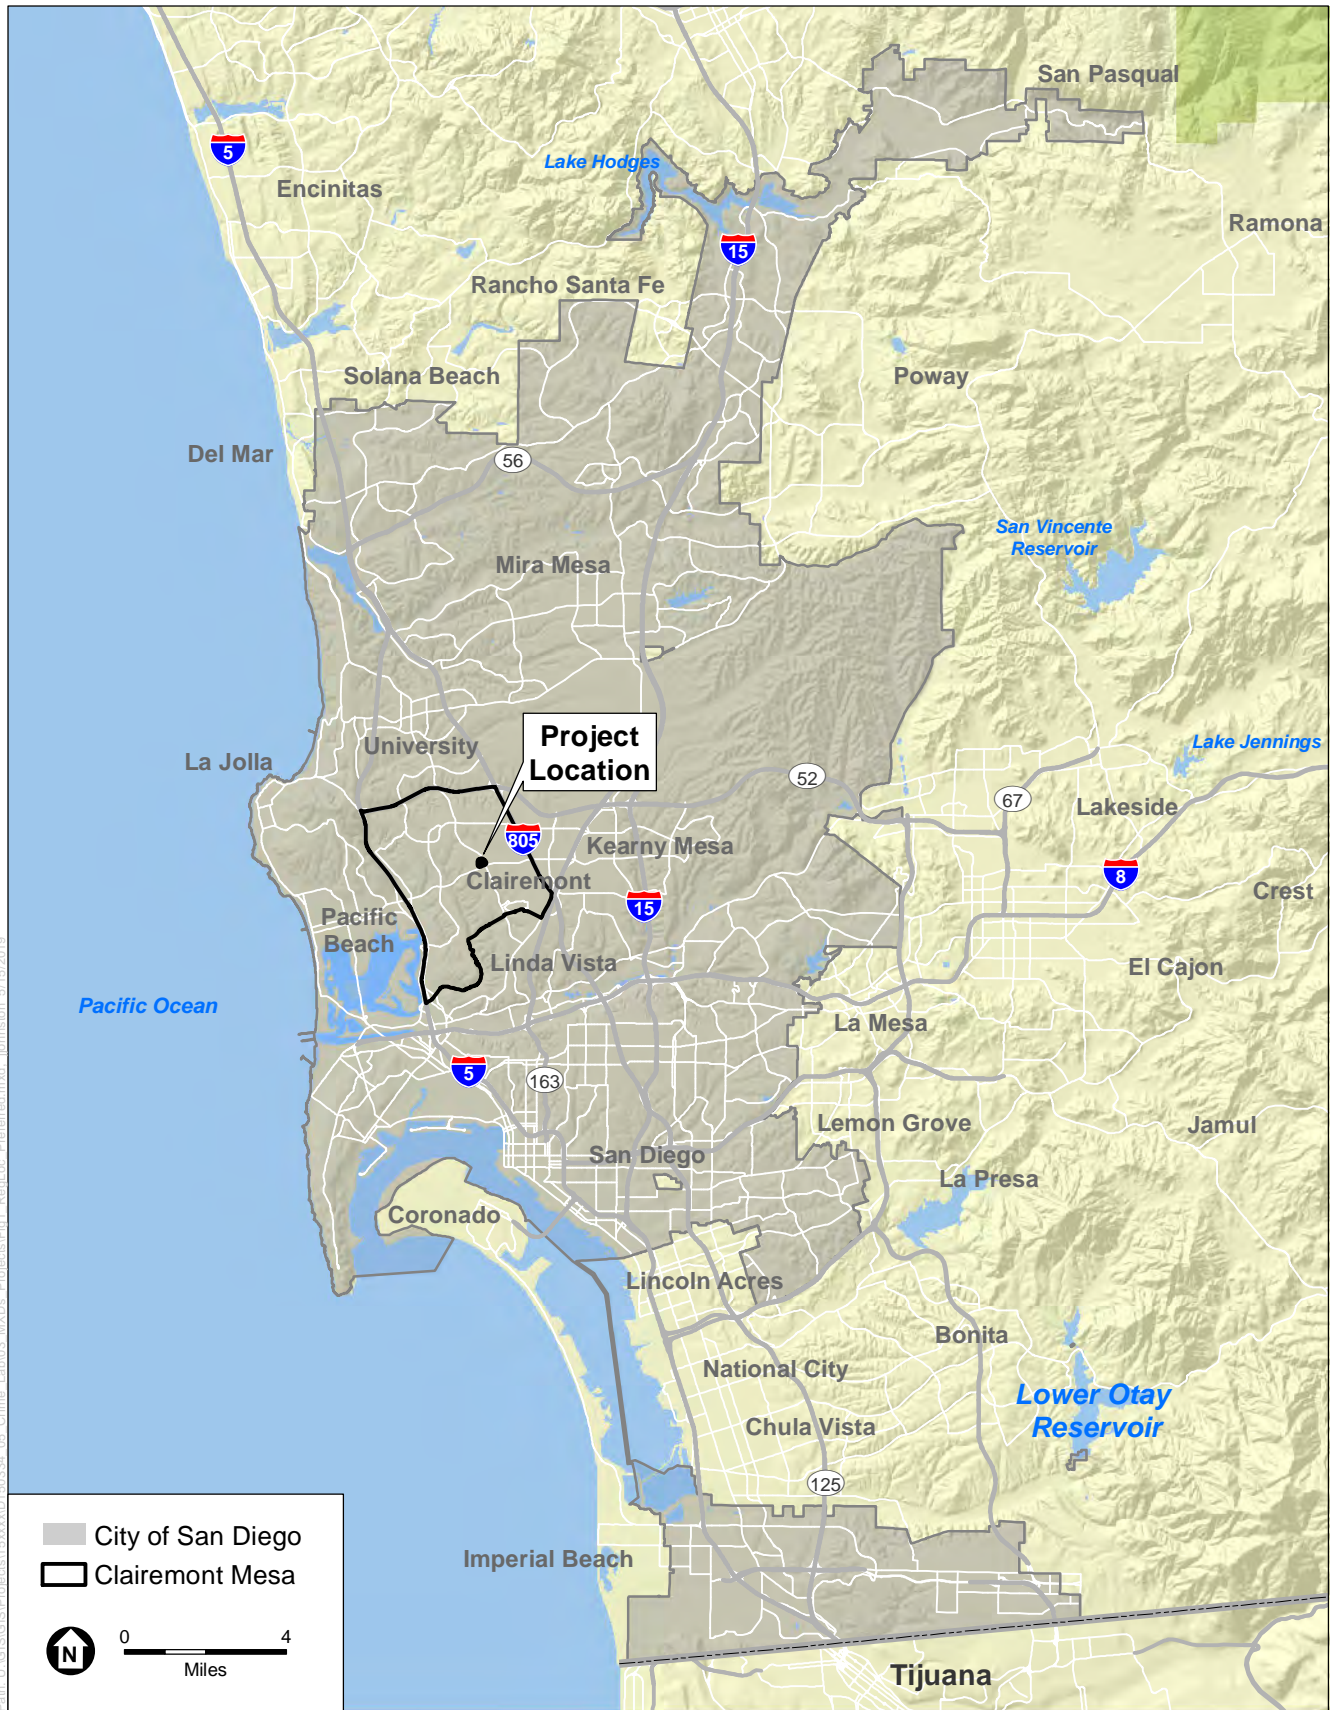

There are existing utilities including water, sewer, storm drainage, and power to serve the existing development and proposed project. Implementation of the

proposed project would not require an expansion or new construction of utilities or public services to accommodate the new development.

Proposed site access changes are intended to accommodate planned traffic and provide an improved multi-modal system and are not anticipated to induce growth. Overall, these infrastructure changes would not remove obstacles to growth or induce growth beyond planned.

Based on the forecasted population for the adopted CMCP stated above, the population in the project area will grow whether or not the proposed project is approved. The proposed project would encourage more affordable housing in the CMCP area on a site that is suitable for this type of growth because it is located in a planned TPA, within an existing developed area with access to services, and served by existing utilities. Therefore, the proposed project would provide comprehensive planning for the management of population growth and necessary economic expansion to support development efforts. In addition, the proposed project would allow an appropriate balance of managed population, housing, and economic growth to accommodate community development while maintaining related community and environmental standards.

In summary, Clairemont Mesa is an urbanized community. According to the adopted CMCP, future development of the vacant residential land and redevelopment opportunities could result in an addition of 1,100 dwelling units (not including mixed-use development), totaling 33,000 dwelling units or a three percent increase over the existing housing stock in the 15 years after the existing Community Plan was adopted (City of San Diego 2011). The ongoing CMCP update anticipates extensive growth of all land use types in the Clairemont Mesa planning area, including residential housing. The CMCP Update EIR to be prepared by the City as Lead Agency will evaluate the impacts associated with this anticipated growth.

CHAPTER 2.0 SIGNIFICANT ENVIRONMENTAL EFFECTS OF THE PROJECT

This chapter of the EIR provides discussions of those issue areas for which project implementation would result in either (1) significant impacts that cannot be avoided and/or (2) significant impacts that can be avoided, reduced, or minimized through mitigation measures that would be implemented by the proposed project. Sections include Section 2.1, Air Quality; 2.2, Hazards and Hazardous Materials; 2.3, Noise and Vibration; and 2.4, Transportation.

Transportation and Traffic would result in significant and unavoidable impacts. Air Quality, Hazards and Hazardous Materials, Noise and Vibration, and Transportation and Traffic include mitigation that would reduce project impacts to less than significant.

Each environmental issue area describes the following topics.

- Existing conditions
- Regulatory framework
- Analysis of project effects and determination as to significance
- Cumulative impacts
- Significance of impacts prior to mitigation
- Mitigation (if applicable)
- Conclusion

This page intentionally left blank

2.1 Air Quality

This section addresses air emissions generated by construction and operation of the proposed project. The analysis also addresses consistency of the project with air quality policies set forth by the San Diego County Air Pollution Control District (SDAPCD) and the City of San Diego (City). The analysis of project-generated air emissions focuses on whether the project would cause an exceedance of an ambient air quality standard or a SDAPCD significance threshold. Details regarding the air quality analysis are provided in Appendix D of this EIR.

Comments related to air quality received during the public comment period for the Notice of Preparation (NOP) included concerns related to dust from construction and pollution from the rezone of the project site. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to create air quality impacts. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

2.1.1 Existing Conditions

The project site is located in the San Diego Air Basin (Air Basin), which is within the jurisdiction of SDAPCD. The Air Basin is located in the southwest portion of California and encompasses San Diego County. The Air Basin covers 4,260 square miles with topography varying from beaches on the west coast to mountains and desert in the eastern portion.

The Pacific Ocean influences the weather in the San Diego region with semi-permanent high-pressure systems resulting in dry, warm summers and mild, occasionally wet winters. The average temperature ranges from the mid-40s to the high-90s with most of the County's precipitation falling between November and April. Average precipitation ranges from approximately 10 inches at the coast to over 30 inches in the mountains with the desert regions of the County receiving between 4 to 6 inches annually (County of San Diego 2007).

2.1.1.1 *Criteria Air Pollutants*

Certain air pollutants have been recognized to cause notable health problems and consequential damage to the environment either directly or in reaction with other pollutants, due to their presence in elevated concentrations in the atmosphere. These air pollutants have been identified and regulated as "criteria air pollutants" by the United States Environmental Protection Agency (USEPA) as a result of the specific standards, or criteria which have been adopted for them, and are subject to emissions control requirements adopted by Federal, State and local regulatory agencies. The criteria air pollutants include ozone (O₃), volatile organic compounds (VOCs), nitrogen dioxide (NO₂), carbon monoxide

(CO) sulfur dioxide (SO₂): respirable particulate matter (PM₁₀) and fine particulate matter (PM_{2.5}), and lead (Pb).

A brief description of the criteria air pollutants and their health effects are provided below:

- **Ozone:** Ozone is considered a photochemical oxidant, which is a chemical that is formed when VOCs and nitrogen oxides (NO_x), both by-products of fuel combustion, react in the presence of ultraviolet light. Ozone is considered a respiratory irritant and prolonged exposure can reduce lung function, aggravate asthma, and increase susceptibility to respiratory infections. Children and those with existing respiratory diseases are at greatest risk from exposure to ozone.
- **Volatile Organic Compounds:** VOCs are organic chemical compounds of carbon and are not “criteria” pollutants themselves; however, some VOCs contribute, with NO_x, to form ozone, and are regulated to prevent the formation of ozone (USEPA 2017a). Other sources of VOCs include evaporative emissions from paints and solvents, the application of asphalt paving, and the use of household consumer products such as aerosols (CARB 2016a). Adverse effects on human health are not caused directly by VOCs, but rather by reactions of VOCs to form secondary pollutants, such as ozone.
- **Nitrogen Dioxide:** NO₂ is also a by-product of fuel combustion and is formed both directly as a product of combustion and in the atmosphere through the reaction of nitrogen oxide (NO) with oxygen. NO₂ is a respiratory irritant and may affect those with existing respiratory illness, including asthma. NO₂ can also increase the risk of respiratory illness.
- **Carbon Monoxide:** CO is a product of fuel combustion. CO is an odorless, colorless gas. It affects red blood cells in the body by binding to hemoglobin and reducing the amount of oxygen that can be carried to the body’s organs and tissues. CO can cause health effects to those with cardiovascular disease and can also affect mental alertness and vision.
- **Sulfur Dioxide:** SO₂ is a colorless, reactive gas that is produced from the burning of sulfur-containing fuels such as coal and oil and by other industrial processes. Generally, the highest concentrations of SO₂ are found near large industrial sources. SO₂ is a respiratory irritant that can cause narrowing of the airways leading to wheezing and shortness of breath. Long-term exposure to SO₂ can cause respiratory illness and aggravate existing cardiovascular disease.
- **Particulate Matter (PM₁₀ and PM_{2.5}):** Particulate matter (PM) is a mixture of solid particles and liquid droplets found in the air (USEPA 2018b). Some particles, such as dust, dirt, soot, or smoke, are large or dark enough to be seen with the naked eye while other particles are so

small they can only be detected using an electron microscope (USEPA 2018b). PM₁₀ are inhalable respirable particles with diameters that are generally 10 micrometers and smaller; PM_{2.5} are fine inhalable particles with diameters that are generally 2.5 micrometers and smaller (PM_{2.5}) (USEPA 2018b). Thus, PM_{2.5} comprises a portion or a subset of PM₁₀. Sources of PM₁₀ emissions include dust from construction sites, landfills and agriculture, wildfires and brush/waste burning, industrial sources, and wind-blown dust from open lands (CARB 2017a). Sources of PM_{2.5} emissions include combustion of gasoline, oil, diesel fuel, or wood (CARB 2017a). PM₁₀ and PM_{2.5} may be either directly emitted from sources (primary particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as SO₂, NO_x, and certain organic compounds (CARB 2017a). PM₁₀ and PM_{2.5} can increase susceptibility to respiratory infections and can aggravate existing respiratory diseases such as asthma and chronic bronchitis. PM_{2.5} is considered to have the potential to lodge deeper in the lungs. Diesel particulate matter is classified a carcinogen.

- **Lead (Pb):** Lead (Pb) in the atmosphere occurs as particulate matter. With the phase-out of leaded gasoline, large manufacturing facilities are the sources of the largest amounts of lead emissions. Lead has the potential to cause gastrointestinal, central nervous system, kidney and blood diseases upon prolonged exposure. Lead is also classified as a probable human carcinogen.

National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) have been set at levels considered safe to protect public health, including the health of sensitive populations such as asthmatics, children, and the elderly with a margin of safety; and to protect public welfare, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings. **Table 2.1-1** shows the current NAAQS and CAAQS for each criteria pollutant.

2.1.1.2 Toxic Air Contaminants

Toxic air contaminants (TACs) are generally known or suspected to cause serious health problems, with no corresponding ambient air quality standard. TACs are also defined as an air pollutant that may increase a person's risk of developing cancer and/or other serious health effects. Other factors, such as the chemical's amount, toxicity, how it is released into the air, weather, and terrain, all influence whether hazardous to human health. TACs are emitted by a variety of industrial processes such as petroleum refining, electric utility and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust and may exist as PM₁₀ and PM_{2.5} or as vapors (gases). TACs include metals, other particles, gases absorbed by particles, and certain vapors from fuels and other sources.

**Table 2.1-1
Ambient Air Quality Standards**

Pollutant	Average Time	California Standards ^a		National Standards ^b		
		Concentration ^c	Method ^d	Primary ^{c,e}	Secondary ^{c,f}	Method ^g
O ₃ ^h	1 Hour	0.09 ppm (180 µg/m ³)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m ³)		0.070 ppm (137 µg/m ³)		
NO ₂ ⁱ	1 Hour	0.18 ppm (339 µg/m ³)	Gas Phase Chemiluminescence	100 ppb (188 µg/m ³)	None	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m ³)		53 ppb (100 µg/m ³)	Same as Primary Standard	
CO	1 Hour	20 ppm (23 mg/m ³)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m ³)	None	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10mg/m ³)		9 ppm (10 mg/m ³)		
SO ₂ ^j	1 Hour	0.25 ppm (655 µg/m ³)	Ultraviolet Fluorescence	75 ppb (196 µg/m ³)	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method) ^g
	3 Hour	—		—	0.5 ppm (1300 µg/m ³)	
	24 Hour	0.04 ppm (105 µg/m ³)		0.14 ppm (for certain areas) ^j	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas) ^j	—	
PM ₁₀ ^k	24 Hour	50 µg/m ³	Gravimetric or Beta Attenuation	150 µg/m ³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m ³		—		
PM _{2.5} ^k	24 Hour	No Separate State Standard		35 µg/m ³	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m ³	Gravimetric or Beta Attenuation	12.0 µg/m ^{3 k}		

Pollutant	Average Time	California Standards ^a		National Standards ^b		
		Concentration ^c	Method ^d	Primary ^{c,e}	Secondary ^{c,f}	Method ^g
Lead ^{l,m}	30 Day Average	1.5 µg/m ³	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m ³ (for certain areas) ^m	Same as Primary Standard	
	Rolling 3-Month Average ^m	—		0.15 µg/m ³		
Visibility Reducing Particles ⁿ	8 Hour	Extinction coefficient of 0.23 per kilometer — visibility of 10 miles or more (0.07 — 30 miles or more for Lake Tahoe) due to particles when relative humidity is less than 70 percent. Method: Beta Attenuation and Transmittance through Filter Tape.		No Federal Standards		
Sulfates (SO ₄)	24 Hour	25 µg/m ³	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m ³)	Ultraviolet Fluorescence			
Vinyl Chloride ^l	24 Hour	0.01 ppm (26 µg/m ³)	Gas Chromatography			

NOTES:

- ^a California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
- ^b National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over 3 years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 micrograms/per cubic meter (µg/m³) is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over 3 years, are equal to or less than the standard.
- ^c Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
- ^d Any equivalent procedure which can be shown to the satisfaction of the California Air Resources Board to give equivalent results at or near the level of the air quality standard may be used.
- ^e National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
- ^f National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

Pollutant	Average Time	California Standards ^a		National Standards ^b		
		Concentration ^c	Method ^d	Primary ^{c,e}	Secondary ^{c,f}	Method ^g
<p>^g Reference method as described by the USEPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the USEPA.</p> <p>^h On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.</p> <p>ⁱ To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb.</p> <p>^j On June 2, 2010, a new 1-hour SO₂ standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO₂ national standards (24-hour and annual) remain in effect until 1 year after an area is designated for the 2010 standard, except that in areas designated non-attainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.</p> <p>^k On December 14, 2012, the national annual PM_{2.5} primary standard was lowered from 15 µg/m³ to 12.0 µg/m³.</p> <p>^l The California Air Resources Board has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.</p> <p>^m The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 µg/m³ as a quarterly average) remains in effect until 1 year after an area is designated for the 2008 standard, except that in areas designated non-attainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.</p> <p>ⁿ In 1989, the California Air Resources Board converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.</p>						
<p>SOURCE: CARB 2016.</p>						

TAC emissions can be damaging to human health and to the environment. Human exposure to TAC emissions at sufficient concentrations and durations can result in cancer, poisoning, and rapid onset of sickness, such as nausea or difficulty in breathing. Other less measurable effects include immunological, neurological, reproductive, developmental, and respiratory problems. TACs deposited onto soil or into water bodies affect ecological systems and eventually human health through consumption of contaminated food. The carcinogenic potential of TACs is a particular public health concern because many scientists currently believe that there is no "safe" level of exposure to carcinogens. Any exposure to a carcinogen poses some risk of contracting cancer.

The public's exposure to TACs is a significant public health issue in California. The Air Toxics "Hotspots" Information and Assessment Act is a State law requiring facilities to report emissions of TACs to air districts including the amounts of TACs emissions, the location, the concentrations to which the public is exposed, and the resulting health risks.

The State Air Toxics Program (Assembly Bill 2588) identified over 200 TACs, including the 188 TACs identified in the Clean Air Act. USEPA has assessed this expansive list of toxics and identified 21 TACs as Mobile Source Air Toxics (MSATs). MSATs are compounds emitted from highway vehicles and non-road equipment. Some toxic compounds are present in fuel and are emitted to the air when the fuel evaporates or passes through the engine unburned. Other toxics are emitted from the incomplete combustion of fuels or as secondary combustion products. Metal air toxics also result from engine wear or from impurities in oil or gasoline. USEPA also extracted a subset of these 21 MSAT compounds that it now labels as the six priority transportation MSATs: benzene, formaldehyde, acetaldehyde, diesel particulate matter/diesel exhaust organic gases, acrolein, and 1,3-butadiene.

Within the San Diego Air Basin, excluding diesel particulates, the incremental cancer risk from air toxics has been reduced by approximately 70 percent since 1989. As of 2014, the estimated risk was 345-in-one million for Chula Vista and 394-in-one million for El Cajon, down from 481- and 545-in-one million, respectively, in 1989 (SDAPCD 2018).

Diesel Particulate Matter

According to the 2006 California Almanac of Emissions and Air Quality, the majority of the estimated health risks from TACs can be attributed to relatively few compounds, the most important being particulate matter from the exhaust of diesel-fueled engines, i.e., diesel particulate matter (DPM). DPM differs from other TACs in that it is not a single substance, but rather a complex mixture of hundreds of substances.

Diesel exhaust is composed of two phases, gas and particle, and both phases contribute to the health risk. The gas phase is composed of many of the urban hazardous air pollutants, such as acetaldehyde, acrolein, benzene, 1,3-butadiene, formaldehyde and polycyclic aromatic hydrocarbons. The particle phase is also composed of many different types of particles by size or composition. Fine and ultra-fine diesel particulates are of the greatest health concern, and may be composed of elemental carbon with adsorbed compounds such as organic compounds, sulfate, nitrate, metals and other trace elements. Diesel exhaust is emitted from a broad range of diesel engines; the on road diesel engines of trucks, buses and cars and the off-road diesel engines that include locomotives, marine vessels and heavy-duty equipment. Although DPM is emitted by diesel-fueled internal combustion engines, the composition of the emissions varies depending on engine type, operating conditions, fuel composition, lubricating oil, and whether an emission control system is present.

The most common exposure to DPM is breathing the air that contains diesel exhaust. The fine and ultra-fine particles are respirable (similar to PM_{2.5}), which means that they can avoid many of the human respiratory system defense mechanisms and enter deeply into the lung. Exposure to DPM comes from both on-road and off-road engine exhaust that is either directly emitted from the engines or lingering in the atmosphere.

Diesel exhaust causes health effects from both short-term or acute exposures, and long-term chronic exposures. The type and severity of health effects depends upon several factors including the amount of chemical exposure and the duration of exposure. Individuals also react differently to different levels of exposure. There is limited information on exposure to just DPM but there is enough evidence to indicate that inhalation exposure to diesel exhaust causes acute and chronic health effects.

Acute exposure to diesel exhaust may cause irritation to the eyes, nose, throat and lungs, some neurological effects such as lightheadedness. Acute exposure may also elicit a cough or nausea as well as exacerbate asthma. Chronic exposure to DPM in experimental animal inhalation studies have shown a range of dose-dependent lung inflammation and cellular changes in the lung and immunological effects. Based upon human and laboratory studies, there is considerable evidence that diesel exhaust is a likely carcinogen. Human epidemiological studies demonstrate an association between diesel exhaust exposure and increased lung cancer rates in occupational settings.

DPM contributes significantly to ambient air risk levels but cannot be measured directly since it is comprised of many individual compounds and cannot be analyzed as a single compound. However, CARB has estimated the excess

cancer risk from diesel particulate matter in California in 2014 as 460 in a million (down 68% from the 1990 risk of 1600 in a million). (SDAPCD 2018).

2.1.1.3 Regional Air Quality

The project site is located in the Air Basin, within the jurisdiction of SDAPCD, which is required, pursuant to the federal and state Clean Air Acts, to reduce emissions of criteria air pollutants which do not meet federal and state ambient air quality standards (NAAQS and CAAQS) in the Air Basin. Areas that do not meet the NAAQS or the CAAQS for a particular pollutant are considered to be “nonattainment areas” for that pollutant. **Table 2.1-2** provides a summary of the attainment status of the San Diego Air Basin with respect to the federal and state standards.

**Table 2.1-2
San Diego Air Basin Attainment Status**

Pollutant	Federal Designation	State Designation
O ₃ (1-hour standard)	Attainment ^a	Nonattainment
O ₃ (8-hour – 2008)	Nonattainment	Nonattainment
CO	Attainment	Attainment
PM10	Unclassified ^b	Nonattainment
PM2.5	Attainment	Nonattainment
NO ₂	Attainment	Attainment
SO ₂	Attainment	Attainment
Lead (Pb)	Attainment	Attainment
Sulfates	(no federal standard)	Attainment
Hydrogen Sulfide	(no federal standard)	Unclassified
Visibility Reducing Particles	(no federal standard)	Unclassified

NOTES:

^a The federal 1-hour standard of 0.12 ppm was in effect from 1979 through June 15, 2005. The revoked standard is referenced here because it was employed for such a long period and because this benchmark is addressed in state implementation plans is designated unclassifiable/attainment.

^b At the time of designation, if the available data does not support a designation of attainment or nonattainment, the area is designated as unclassified in this table.

SOURCE: CARB 2018.

As shown in Table 2.1-2, the Air Basin is currently classified as a nonattainment area for the 2008 federal 8-hour ozone standard. In addition, the Air Basin is classified as a nonattainment area for the California standards for ozone (8-hour ozone standard and 1-hour ozone standard), PM10, and PM2.5.

2.1.1.4 Local Air Quality

SDAPCD maintains a network of ten air quality monitoring stations located throughout the Air Basin to measure ambient pollutant concentrations. The San Diego - Kearny Villa Road Station is the closest station to the project site, located approximately 3.85 miles southwest of the project site, and therefore, is considered most representative station for the project site. The station provides concentrations of 8-hour and 1-hour ozone, PM_{2.5}, PM₁₀, and NO₂. CO and SO₂ have not been monitored in San Diego County since 2012 due to their continued attainment status. The most recent five years of pollutant concentration data available from this monitoring station is from years 2014 to 2018, as summarized in **Table 2.1-3**.

2.1.1.5 Sensitive Receptors

Certain population groups, such as children, elderly, and acutely and chronically ill persons (especially those with cardio-respiratory diseases), are considered more sensitive to the potential effects of air pollution than others. The nearest sensitive land uses to the project site include the following:

- Residences located 150 feet west of the project site across the SDG&E easement parking lot,
- Residences located 170 feet northwest of the project site north of Mount Etna Drive and to the west of the commercial plaza,
- Residences located 400 feet south of the project site south of Balboa Avenue,
- The nearest school, Mount Everest Academy, is located 550 feet west of the project site, west of Mount Everest Boulevard, and
- Horizon Christian Academy is located 1,100 feet south of the project site, south of Mount Alifan Drive.

Other air quality sensitive receptors located farther away from the project site would be less impacted by Project emissions because pollutant concentrations reduce with distance from the source (CARB 2017) (i.e., project demolition and building construction at the project site).

**Table 2.1-3
Ambient Air Quality Data (San Diego – Kearny Villa Road Station)**

Pollutant/Standard	2014	2015	2016	2017	2018
O₃ (1-hour)					
Maximum Concentration (ppm)	0.099	0.077	0.087	0.097	0.102
Days > CAAQS (0.09 ppm)	1	0	0	2	1
O₃ (8-hour)					
Maximum Concentration (ppm)	0.082	0.070	0.075	0.084	0.077
Days > CAAQS (0.070 ppm)	4	0	3	6	5
Days > NAAQS (0.070 ppm)	4	0	3	6	5
NO₂ (1-hour)					
Maximum Concentration (ppm)	0.051	0.051	0.053	0.054	0.045
98th Percentile Concentration (ppm)	0.045	0.044	0.042	0.041	0.038
Days > CAAQS (0.18 ppm)	0	0	0	0	0
NO₂ (Annual)					
Annual Arithmetic Mean (0.030 ppm)	0.010	0.009	0.009	0.009	0.008
PM₁₀ (24-hour)					
Maximum Concentration (µg/m ³)	39	37	35	47	38
Days > CAAQS (50 µg/m ³)	0	0	0	0	0
Days > NAAQS (150 µg/m ³)	0	0	0	0	0
PM₁₀ (Annual)					
Annual Arithmetic Mean (20 µg/m ³)	19.5	16.7	*	17.6	18.4
PM_{2.5} (24-hour)					
Maximum Concentration (µg/m ³)	20.2	25.7	19.4	27.5	32.2
98th Percentile Concentration (µg/m ³)	17.2	15.7	13.0	17.6	21.6
Days > NAAQS (35 µg/m ³)	0	0	0	0	0
PM_{2.5} (Annual)					
Annual Arithmetic Mean (12 µg/m ³)	8.1	7.2	7.5	7.9	8.3

ppm = parts per million; µg/m³ = micrograms per cubic meter

* means there was insufficient data to determine the value.

CO and SO₂ concentrations are not available for San Diego County between 2013 and 2017.

SOURCE: CARB 2019.

2.1.2 Regulatory Setting

2.1.2.1 Federal

Clean Air Act

The federal Clean Air Act of 1963 was the first federal legislation regarding air pollution control and has been amended numerous times in subsequent years,

with the most recent amendments occurring in 1990. At the federal level, USEPA is responsible for implementation of certain portions of the Clean Air Act including mobile source requirements. Other portions of the Clean Air Act, such as stationary source requirements, are implemented by state and local agencies.

The Clean Air Act establishes NAAQS and specifies future dates for achieving compliance. The Clean Air Act also mandates that the state submit and implement a State Implementation Plan for areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met. The 1990 amendments to the Clean Air Act identify specific emission reduction goals for areas not meeting the NAAQS. These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain or to meet interim milestones.

The sections of the Clean Air Act which are most applicable to the project include Title I (Nonattainment Provisions) and Title II (Mobile Source Provisions). Title I requirements are implemented for the purpose of attaining NAAQS for the following criteria pollutants: O₃, NO₂, CO, SO₂, PM₁₀, PM_{2.5}, and lead.

In addition to criteria pollutants, Title I also includes air toxics provisions which require USEPA to develop and enforce regulations to protect the public from exposure to airborne contaminants that are known to be hazardous to human health. In accordance with Section 112, USEPA established National Emission Standards for Hazardous Air Pollutants (NESHAPs). The list of hazardous air pollutants (HAPs), or air toxics, includes specific compounds that are known or suspected to cause cancer or other serious health effects.

Title II requirements pertain to mobile sources, such as cars, trucks, buses, and planes. Reformulated gasoline, automobile pollution control devices, and vapor recovery nozzles on gas pumps are a few of the mechanisms USEPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles which have strengthened in recent years to improve air quality. For example, the standards for NO_x emissions have been lowered substantially, and the specification requirements for cleaner burning gasoline are more stringent.

2.1.2.2 State

California Clean Air Act

The California Clean Air Act, signed into law in 1988, requires all areas of the State to achieve and maintain the CAAQS by the earliest practical date. The CAAQS apply to the same criteria pollutants as the federal Clean Air Act but also include State-identified criteria pollutants, which include sulfates, visibility-

reducing particles, hydrogen sulfide, and vinyl chloride. The California Air Resources Board (CARB) has primary responsibility for ensuring the implementation of the California Clean Air Act, responding to the federal Clean Air Act planning requirements applicable to the state, and regulating emissions from motor vehicles and consumer products within the state. Table 2.1-1 shows the CAAQS currently in effect for each of the criteria pollutants, as well as, the other pollutants recognized by the state. As shown in Table 2.1-1, the CAAQS are more stringent than the NAAQS for most of the criteria air pollutants.

Health and Safety Code Section 39607(e) requires CARB to establish and periodically review area designation criteria. Table 2.1-3 provides a summary of the attainment status of the San Diego Air Basin with respect to the state standards. The Air Basin is designated as attainment for the California standards for CO, NO₂, SO₂, sulfates, and lead, and unclassified for hydrogen sulfide and visibility-reducing particles.

California Air Resources Board Air Quality and Land Use Handbook

CARB published the *Air Quality and Land Use Handbook* in April 2005 to serve as a general guide for considering impacts to sensitive receptors from facilities that emit TAC emissions (CARB 2005). In 2017, as a technical supplement to the Handbook, CARB published *Technical Advisory; Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways* (CARB 2017b). The recommendations provided therein are voluntary and do not constitute a requirement or mandate for either land use agencies or local air districts. The goal of the guidance document is to protect sensitive receptors, such as children, the elderly, acutely ill, and chronically ill persons, from exposure to TAC emissions. Some examples of CARB's siting recommendations include the following: (1) avoid siting sensitive receptors within 500 feet of a freeway, urban road with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day; (2) avoid siting sensitive receptors within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units per day, or where transport refrigeration unit operations exceed 300 hours per week); and (3) avoid siting sensitive receptors within 300 feet of any dry cleaning operation using perchloroethylene and within 500 feet of operations with two or more machines.

California Air Resources Board On-Road and Off-Road Vehicle Rules

In 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel PM and other TACs. The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This

measure does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given time.

In 2008, CARB approved the Truck and Bus regulation to reduce NO_x, PM₁₀, and PM_{2.5} emissions from existing diesel vehicles operating in California. The requirements were amended in 2010 and apply to nearly all diesel fueled trucks and busses with a gross vehicle weight rating greater than 14,000 pounds. For the largest trucks in the fleet, those with a gross vehicle weight rating greater than 26,000 pounds, there are two methods to comply with the requirements. The first way is for the fleet owner to retrofit or replace engines, starting with the oldest engine model year, to meet 2010 engine standards, or better. This is phased over 8 years, starting in 2015 and would be fully implemented by 2023, meaning that all trucks operating in the State subject to this option would meet or exceed the 2010 engine emission standards for NO_x and PM by 2023. The second option, if chosen, requires fleet owners, starting in 2012, to retrofit a portion of their fleet with diesel particulate filters achieving at least 85 percent removal efficiency, so that by January 1, 2016 their entire fleet is equipped with diesel particulate filters. However, diesel particulate filters do not typically lower NO_x emissions. Thus, fleet owners choosing the second option must still comply with the 2010 engine emission standards for their trucks and busses by 2020.

In addition to limiting exhaust from idling trucks, in 2007, CARB promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower such as bulldozers, loaders, backhoes and forklifts, as well as many other self-propelled off-road diesel vehicles. The regulation aims to reduce emissions by installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models. Implementation is staggered based on fleet size (which is the total of all off-road horsepower under common ownership or control), with the largest fleets to begin compliance by 2014. Each fleet must demonstrate compliance through one of two methods. The first option is to calculate and maintain fleet average emissions targets, which encourages the retirement or repowering of older equipment and rewards the introduction of newer cleaner units into the fleet. The second option is to meet the Best Available Control Technology (BACT) requirements by turning over or installing Verified Diesel Emission Control Strategies (e.g., engine retrofits) on a certain percentage of its total fleet horsepower. The compliance schedule requires that BACT turn overs or retrofits be fully implemented by 2023 in all equipment in large and medium fleets and across 100 percent of small fleets by 2028.

2.1.2.3 Regional

San Diego County Air Pollution Control District

SDAPCD has the primary responsibility for the control of air pollution from all sources other than emissions from motor vehicles, which falls under the responsibility of CARB and USEPA. Each air district must prepare and adopt an air quality management plan (AQMP) or regional air quality strategy (RAQS) to demonstrate how the district will achieve attainment for the CAAQS and NAAQS. SDAPCD first prepared and submitted the 1991 RAQS to address San Diego County's nonattainment status for ozone; the latest revision was in 2016. The RAQS relies on information from the CARB, San Diego Association of Governments (SANDAG), and the SANDAG Transportation Control Measures Plan (TCM) (County of San Diego 2007). The 2016 Revision of the RAQS contains an overview of statutory requirements, air quality assessment, recent and projected future emission reduction rates, adopted and proposed control measures, overview of incentive programs, review of TCM, and reaffirmation of state emission offset repeal. The RAQS focuses on VOC and NO_x, which are both ozone precursors. If a five percent per year reduction of ozone precursors is not feasible, then alternative strategies must be identified and every feasible control measure implemented (SDAPCD 2016).

SDAPCD is responsible for planning, implementing, and enforcing federal and state ambient standards in the Air Basin. The following rules and regulations would apply to construction that occurs pursuant to SPAPCD and relevant to the proposed project:

Regulation II: Permits; Rule 20.2: New Source Review – Non-Major Sources. Applies to any new or modified stationary source, to any new or modified emission unit and to any relocated emission unit that is not considered a major stationary source. As applied to new or modified sources, the rule requires (1) the use of BACT, where the emissions of PM₁₀, NO_x, VOC, or SO_x would increase by 10 pounds per day or more; (2) an air quality impact analysis if the emissions of PM₁₀, NO_x, VOC, SO_x, or lead exceed designated trigger levels; and (3) establishes public noticing requirements prior to issuance of a permit.

Regulation IV: Prohibitions; Rule 50: Visible Emissions. Prohibits any activity causing air contaminant emissions darker than 20 percent opacity for more than an aggregate of 3 minutes in any consecutive 60-minute time period. In addition, Rule 50 prohibits any diesel pile-driving hammer activity causing air contaminant emissions for a period or periods aggregating more than 4 minutes during the driving of a single pile.

Regulation IV: Prohibitions; Rule 51: Nuisance. Prohibits the discharge, from any source, of such quantities of air contaminants or other

materials that cause or have a tendency to cause injury, detriment, nuisance, annoyance to people and/or the public, or damage to any business or property.

Regulation IV: Prohibitions; Rule 55: Fugitive Dust. Regulates fugitive dust emissions from any commercial construction or demolition activity capable of generating fugitive dust emissions, including active operations, open storage piles, and inactive disturbed areas, as well as track-out and carry-out onto paved roads beyond a project site.

Regulation IV: Prohibitions; Rule 67.0: Architectural Coatings. Architectural coatings are regulated under Rule 67.0.1 (Architectural Coatings). Rule 67.0.1 incorporates the tighter VOC limits of the CARB's 2007 Suggested Control Measures and is estimated to reduce VOC emissions in San Diego County by 839.5 tons per year (2.3 tons per day) with a cost-effectiveness of \$1.12 per pound of VOC reduced (SDAPCD 2016). Requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.

Regulation XI: National Emission Standards for Hazardous Air Pollutants; Subpart M, Rule 361.145: Standard for Demolition and Renovation. Requires owners and operators of a demolition or renovation activity to provide written notification of planned asbestos stripping or removal to the Control Officer no less than 10 days prior to demolition and/or asbestos removal. A Notification of Demolition and Renovation Form and fee is required with written notification. Procedures for asbestos emission control are provided under Rule 361.145 and must be followed in accordance with this regulation.

Rule 361.145: Requires notification and work practice standards for asbestos removal and demolition, as specified under Rule 40, Code of Federal Regulations 61, Subpart M.

San Diego County Grading, Clearing and Watercourses Ordinance: Section 87.428 Dust Control Measures.

Requires all clearing and grading to be carried out with dust control measures adequate to prevent creation of a nuisance to persons or public or private property. Clearing, grading or improvement plans shall require that measures such as the following be undertaken to achieve this result: watering, application of surfactants, shrouding, control of vehicle speeds, paving of access areas, or other operational or technological measures to reduce dispersion of dust. These project design measures are to be incorporated into all earth disturbing activities to minimize the amount of PM emissions from construction (County of San Diego 2007).

San Diego Association of Governments San Diego Forward: The Regional Plan

In 2015, the SANDAG Board of Directors adopted San Diego Forward: The Regional Plan. This plan combines the Regional Comprehensive Plan (RCP) with the 2050 Regional Transportation Plan and Sustainable Communities Strategy (RTP/SCS), adopted in 2012. The Regional Plan identifies the five following strategies to move the San Diego region toward sustainability:

- Focus housing and job growth in urbanized areas where there is existing and planned transportation infrastructure, including transit,
- Protect the environmental and help ensure the success of smart growth land use policies by preserving sensitive habitat, open space, cultural resources, and farmland,
- Invest in a transportation network that gives people transportation choices and reduces greenhouse gas emissions,
- Address the housing needs of all economic segments of the population, and
- Implement the Regional Plan through incentives and collaboration.

Air quality has improved significantly over the past four decades as measured by the decreasing trend in the number of days with an Air Quality Index (AQI) over 100. In particular, the number of days exceeding the federal 2008 ozone standard has dropped from 179 days in 1981 to 12 days in 2014 (SANDAG 2015).

2.1.2.4 Local

City of San Diego General Plan

The Conservation Element of the City of San Diego's General Plan includes goals and policies to improve the air quality conditions within the City and the Air Basin (City of San Diego 2012). Air Quality goals applicable to the proposed project include: "Regional air quality which meets state and federal standards." Applicable policies include:

Policy CE-F.4: Preserve and plant trees, and vegetation that are consistent with habitat and water conservation policies and that absorb carbon dioxide and pollutants.

2.1.3 Analysis of Project Effects and Determination of Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant air quality impact would occur if the project would:

Issue 1: Conflict with or obstruct implementation of the applicable air quality plan;

Issue 2: Violate any air quality standard or contribute substantially to an existing or projected air quality violation;

Issue 3: Result in a cumulatively considerable new increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including release emissions which exceed quantitative thresholds for ozone precursors);

Issue 4: Expose sensitive receptors to substantial pollutant concentrations including air toxics such as diesel particulates. As adopted by the South Coast Air Quality Management District (SCAQMD) in their CEQA Air Quality Handbook (Chapter 4), a sensitive receptor is a person in the population who is particularly susceptible to health effects due to exposure to an air contaminant than is the population at large. Sensitive receptors (and the facilities that house them) in proximity to localized CO sources, toxic air contaminants or odors are of particular concern;

Issue 5: Create objectionable odors affecting a substantial number of people.

2.1.3.1 Conflict with Air Quality Plan

Issue 1: Conflict with or obstruct implementation of the applicable air quality plan.

Impact Analysis

Community Plan Amendment and Rezone

All areas designated as nonattainment are required to prepare plans showing how the area would meet the state and federal air quality standards by its attainment dates. The San Diego RAQS is the region's applicable air quality plan for improving air quality in the Air Basin and attaining federal and state air quality standards. The RAQS relies on information from CARB and SANDAG, including projected growth in the County, which is based in part on local general plans. Therefore, the future development allowed under the Community Plan Amendment and rezone portion of the project would be required to be consistent with the air quality standards outlined in the RAQS.

Air pollutant emissions generated from the construction and operation of future residential development would have the potential to affect implementation of the RAQS. Emissions from construction activities of the future residential development would be minimal, as shown under Issue 2, below. In addition, project construction would comply with SDAPCD Rules and Regulations, including Rules 50, 51, and 55, which forbid visible emissions, nuisance activities, and require fugitive dust control measures, respectively.

The proposed project would allow for a future development that would add 404 dwelling units to the Clairemont Mesa community. Since a CPA is needed, future development would not be consistent with the existing General Plan, and it would not be consistent with the existing assumptions in the RAQS. However, the project is intended to provide an affordable housing option for residents already residing in the area and not draw new residents to the area. The project is intended to accommodate the existing population in accordance with the goals established by the Regional Housing Needs Assessment (RHNA). As discussed in Section 2.8, Population and Housing, the project would result in population growth, however, this growth is accounted for in the City's Housing Element and SANDAG's growth projections, and therefore the project would be consistent with the assumptions in the RAQS. Furthermore, as shown in Issue 2 below, construction and operational emissions of the future development would be minimal, would comply with Rule 67.0, and would be consistent with RAQS. As such, the proposed project would not conflict with or obstruct the implementation of the San Diego RAQS, and impacts would be less than significant.

Site Demolition and Preparation

Air pollutant emissions generated from the demolition of existing structures on the project site and preparation of the site for future residential development would have the potential to affect implementation of the RAQS. However, emissions from site demolition and preparation would be minimal, as shown under Issue 2, below. In addition, project construction would comply with SDAPCD Rules and Regulations, including Rules 50, 51, and 55, which forbid visible emissions, nuisance activities, and require fugitive dust control measures, respectively. As such, the proposed project would not conflict with or obstruct the implementation of the San Diego RAQS, and impacts would be less than significant.

2.1.3.2 Air Quality Standards

Issue 2: Violate any air quality standard or contribute substantially to an existing or projected air quality violation

Ozone, NO_x, VOC, CO, SO_x, PM₁₀, and PM_{2.5} are pollutants of concern established by SDAPCD for analysis. SDAPCD does not provide quantitative thresholds for determining the significance of construction or mobile source-related impacts. However, the district does specify Air Quality Impact Analysis (AQIA) trigger levels for new or modified stationary sources (APCD Rules 20.2 and 20.3). If these incremental levels for stationary sources are exceeded, an AQIA must be performed for the proposed new or modified source. Although these trigger levels do not generally apply to mobile sources or general land development projects, for comparative purposes these levels may be used to evaluate the increased emissions which would be discharged to the Air Basin from proposed land development projects. Project-related air quality impacts estimated in this environmental analysis would be considered significant if:

- Regional construction and operational emissions from both direct and indirect sources would exceed any of the following prescribed daily emissions thresholds (City of San Diego 2012):
 - 100 pounds per day for PM₁₀
 - 55 pounds per day for PM_{2.5}
 - 250 pounds per day for NO_x
 - 250 pounds per day for SO_x
 - 550 pounds per day for CO
 - 75 pounds per day for VOC¹

There are currently no localized significance thresholds for San Diego County.

Impact Analysis

Community Plan Amendment and Rezone

Construction

Construction of the future residential development would have the potential to temporarily generate criteria air pollutants from the operation of heavy-duty construction equipment, such as backhoe, cement mixer, compactor, crane, forklifts, grader, paver, roller, and sweepers; and from vehicle trips generated from workers and haul trucks traveling to and from the project site. In addition, fugitive dust emissions would result from various building construction activities. Construction emissions can vary substantially from day-to-day, depending on the intensity and specific type of construction activity. The maximum daily regional emissions are predicted values for the worst-case day and do not represent the emissions that would actually occur during every day of construction.

Construction of the future development is estimated to begin in June 2021 and continue through October 2022. Project construction activities would include foundations/concrete pour, building construction, paving, and architectural coating. Construction air pollutant emissions were estimated using CalEEMod (Version 2016.3.2) software, an emissions inventory software program. Where project specific information was not provided, CalEEMod defaults were used to determine construction equipment based on the type of construction. The modeling assumes that the proposed future 404 apartment units would include 354 parking spaces. Landscaping and architectural coating would occur during the finishing activities.

Daily regional criteria air pollutant emissions for the different phases of construction were forecasted based on construction activities, on-road and off-road mobile sources, and fugitive dust emission factors associated with the specific construction activity. Off-road mobile source emissions would result from

¹ Threshold for VOCs based on the threshold of significance for VOCs from the South Coast Air Quality Management District for the Coachella Valley.

the use of heavy-duty construction equipment listed above. The emissions of off-road equipment were estimated using CalEEMod. CalEEMod is based on outputs from the OFFROAD model and Emission FACTor (EMFAC) model, which are emissions estimation models developed by CARB and used to calculate emissions from construction activities, heavy-duty off-road equipment, and on-road vehicles. Activities parameters, such as number of equipment and equipment usage hours were provided by the applicant.

Fugitive dust emissions (using PM10 as a surrogate) during construction activities were estimated in CalEEMod, which are based on the methods described in USEPA's AP-42 Compilation of Air Pollutant Emission Factors. During the application of architectural coatings, evaporation of solvents contained in surface coatings result in VOC emissions. CalEEMod was used to calculate VOC emissions based on the building surface area and the default VOC content provided by SCAQMD or CARB's statewide limits. Asphalt paving of parking areas are another source of VOC emissions. CalEEMod was used to calculate VOC off-gassing emissions based on the parking lot size and default emission factor.

On-road mobile sources also have the potential to generate temporary criteria air pollutant emissions through workers and haul trucks traveling to and from the project site during building construction. Mobile source emissions were calculated using the 2017 EMFAC model (EMFAC2017), recently approved by USEPA. EMFAC2017 "represents [CARB's] current understanding of motor vehicle travel activities and their associated emission levels." Although CARB restricts idling times to no more than 5 minutes at any one location, it was conservatively assumed that truck idling activities would total 15 minutes per trip, representing three separate 5-minute idling occurrences: check-in to the project site or queuing at the site boundary upon arrival, on-site idling during loading/unloading, and check-out of the project site or queuing at the site boundary upon departure.

The results of the criteria air pollutant calculations for the construction of the future residential development under the CPA are presented in **Table 2.1-4**. Detailed calculations for all individual phases are included in Appendix D. As shown, construction emissions do not exceed SDAPCD screening thresholds and therefore regional impacts from construction emissions would be less than significant.

Operation

Operation of the future development would have the potential to generate criteria air pollutants from mobile, stationary, and area (e.g., coatings, consumer products, landscaping) sources, which were calculated for the project's full buildout year. Detailed emissions calculations are provided in Appendix D of this EIR.

**Table 2.1-4
Community Plan Amendment and Rezone Maximum Regional Construction
Emissions (lbs/day)**

Phase	VOC	NOx	CO	SO2	PM10	PM2.5
Foundations/ Concrete Pour	1	6	7	<1	1	<1
Building Construction	1	15	12	<1	3	1
Architectural Coating	62	2	3	<1	1	<1
Paving	2	15	15	<1	1	1
BC/AC/Paving (overlap)	65	33	31	<1	4	2
Max Daily Emissions	65	33	31	<1	4	2
SDAPCD Thresholds	75	250	550	520	100	55
Exceed Thresholds?	No	No	No	No	No	No

Totals may not add up exactly due to rounding in the modeling calculations. Detailed emissions calculations are provided in Appendix D.

SOURCE: ESA 2019.

Daily trip generation rates and VMT for the project were provided by the project-specific Transportation Impact Analysis (Appendix I) and include trips associated with the proposed multi-family residences (Chen-Ryan 2019). The VMT estimate takes into consideration the project's locational characteristics, as an infill project near high quality transit (i.e., transit priority area [TPA]). Natural gas usage factors are based on commercial and residential data from the California Energy Commission, and landscape equipment emissions are based on off-road emission factors from CARB. Emissions from the use of consumer products and the reapplication of architectural coatings are based on data provided in CalEEMod.

The results of the regional operational criteria pollutant emission calculations for VOC, NO_x, CO, SO_x, PM10, and PM2.5 are presented in **Table 2.1-5**. As shown in Table 2.1-5, the operational emissions would not exceed the SDAPCD significance thresholds for any of the criteria pollutants. The majority of emissions come from mobile sources as residents and visitors would travel to and from the project site. Therefore, impacts would be less than significant with regard to the violation of any air quality standards.

**Table 2.1-5
Community Plan Amendment and Rezone Estimated Maximum Regional
Operational Emissions (pounds per day)**

Emission Sources	VOC	NO_x	CO	SO₂	PM10	PM2.5

Site Demolition and Preparation

The site demolition and preparation portion of the proposed project includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, grading of the site, and existing utilities stubbed out to the project site boundary. Site demolition and preparation would have the potential to temporarily generate criteria air pollutants through the operation of heavy-duty construction equipment, such as backhoes, compactors, dumpers, excavators, generators, graders, haul trucks, loaders, rollers, and scrapers; and through vehicle trips generated from workers and haul trucks traveling to and from the project site. In addition, fugitive dust emissions would result from demolition and various earthmoving activities. Construction emissions can vary substantially from day-to-day, depending on the intensity and specific type of construction activity. The maximum daily regional emissions are predicted values for the worst-case day and do not represent the emissions that would actually occur during every day of construction.

Site demolition and preparation is estimated to begin in March 2021 and continue through July 2021. Project construction activities would include demolition, site preparation, grading, drainage/utilities/trenching, foundations/concrete pour, building construction, paving, and architectural coating. Site demolition and preparation air pollutant emissions were estimated using CalEEMod (Version 2016.3.2). The modeling assumes that the existing, vacant 103,500 square-foot (SF) building on-site would be demolished. Where project specific information was not provided, CalEEMod defaults were used to determine construction equipment based on the type of construction.

The results of the criteria air pollutant calculations are presented in **Table 2.1-6**. Detailed calculations for all individual phases are included in Appendix D. As shown, construction emissions do not exceed SDAPCD screening thresholds and therefore regional impacts from construction emissions would be less than significant.

**Table 2.1-6
Site Demolition and Preparation Maximum Regional Construction Emissions
(lbs/day)**

Phase	VOC	NOx	CO	SO2	PM10	PM2.5
Demolition	4	52	26	<1	7	3

Totals may not add up exactly due to rounding in the modeling calculations. Detailed emissions calculations are provided in Appendix D.

SOURCE: ESA 2019.

2.1.3.3 Cumulative Increase

Issue 3: Result in a cumulatively considerable new increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including release emissions which exceed quantitative thresholds for ozone precursors)

The project would be considered to be cumulatively considerable if mitigated emissions of ozone precursors (VOC and NOx), PM10, and PM2.5 would exceed City of San Diego's screening thresholds for these pollutants.

Impact Analysis

Community Plan Amendment and Rezone

As detailed under Issue 2 above, the future residential development construction and operation emissions of non-attainment pollutants would be significantly below regulatory thresholds (see Tables 2.1-4 and 2.1-5, respectively, above). Therefore, the project would not result in a cumulatively considerable increase in criteria pollutant emissions related to construction and operation of the future development.

Site Demolition and Preparation

As detailed under Issue 2 in above, site demolition and preparation construction emissions of non-attainment pollutants would be significantly below regulatory thresholds, as shown in Table 2.1-6 above. Therefore, the project would not result in a cumulatively considerable increase in criteria pollutant emissions related to site demolition and preparation.

2.1.3.4 Sensitive Receptors

Issue 4: Expose sensitive receptors to substantial pollutant concentrations including air toxics such as diesel particulates. As adopted by the South Coast Air Quality Management District (SCAQMD) in their CEQA Air Quality Handbook (Chapter 4), a sensitive receptor is a person in the population who is particularly susceptible to health effects due to exposure to an air contaminant than is the population at large. Sensitive receptors (and the facilities that house them) in proximity to localized CO sources, toxic air contaminants or odors are of particular concern.

Impact Analysis

Community Plan Amendment and Rezone

Toxic Air Contaminants

Construction activities would emit DPM from the use of off-road and on-road equipment and haul and vendor trucks. Because DPM is not independently monitored or reported, the analysis uses PM₁₀ as a surrogate for DPM. If the project would emit carcinogenic materials or TACs that exceed the maximum incremental increase in cancer risk of ten-in-one million or an acute or chronic hazard index of 1.0, impacts to sensitive receptors would be significant.

To assess the potential health risk impacts (i.e., cancer, or other acute or chronic conditions) related to TACs exposure from airborne emissions during the project's construction, a refined quantitative health risk assessment (HRA) was prepared. The HRA evaluated the potential for increased health risks for off-site sensitive receptors due to the project construction activities. As health risk is cumulative over the whole construction and operational period, significance is based on the total risk from both the Community Plan Amendment and rezone (and associated future residential development) and site demolition and preparation phases. However, each phase is discussed individually as well as cumulatively below.

The greatest potential for TAC emissions during the project's building construction would be related to DPM tailpipe emissions associated with the operation of heavy-duty equipment during demolition, excavation and grading

activities, building construction, paving and architectural coating. Minor DPM emissions from haul and vendor trucks are also taken into account in the analysis. Construction activities associated with the project would be sporadic, transitory, and short-term in nature.

The operation of the future residential building is not anticipated to result in health risk from operational activities. During long-term operations, TACs could be emitted as part of the periodic maintenance operations, cleaning, painting, etc., periodic visits to the project site from delivery trucks and service vehicles. TAC emissions from periodic maintenance operations, cleaning, painting, etc., are expected to be occasional and result in minimal exposure to off-site and on-site sensitive receptors. Therefore, operational health impacts were evaluated qualitatively in the impact analysis.

Construction-Related Health Risk

The construction HRA was performed in accordance with the revised OEHHA *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments* (OEHHA Guidance) (OEHHA 2015). The analysis incorporates the estimated construction emissions and dispersion modeling using the USEPA AMS/EPA Regulatory Model (AERMOD) model with meteorological data from the closest SDAPCD meteorological monitoring station (San Diego – Kearny Villa Road Station).

For this risk assessment, AERMOD dispersion model output was converted into specific cancer risks and non-cancer chronic health hazard impacts. Health impacts addressed construction and operational DPM emissions and the effects on nearby sensitive uses (residential). Detailed assumptions, methodology, AERMOD dispersion modeling and HRA calculations are included in Appendix D.

Health risk was calculated for the offsite residential and school receptors within approximately 1,000 feet of the project site. AERMOD was used to quantify concentrations at the offsite receptors. Health risk calculations were performed using a spreadsheet tool consistent with the OEHHA guidance. The spreadsheet tool incorporates the algorithms, equations, and a variable described above as well as in the OEHHA guidance, and incorporates the results of the AERMOD dispersion model. Detailed risk assessment is included as Appendix D.

Table 2.1-7 summarizes the carcinogenic risk and non-carcinogenic risk for the maximum impacted sensitive receptors. As shown in Table 2.1-7, the maximum incremental increase in cancer risk would be up to approximately 14-in-one million for construction risk for residential receptors and 0.4-in-one million for school receptors. Health risk for residential receptors would exceed the SCAQMD significance threshold of 10-in-one million for residential receptors, and therefore, impacts would be potentially significant (**Impact AIR-1**), and

Mitigation Measure AIR-1, detailed below, would be required. The chronic health risk from construction of the project is 0.03 for residential and 0.01 for school receptors, well below the significance threshold of 1. The maximum exposed residential receptor is located in the residential development directly west of the project site. The maximum exposed school receptor is located on the Mount Everest Academy campus located west of the project site across Mount Everest Boulevard. Because health risk is cumulative, the Maximum Impacted Sensitive Receptor represents the cumulative risk from both the CPA and rezone of the project site (including the future residential development) and the site demolition and preparation activities. Table 2.1-7 also provides a breakdown of maximum risk per construction phase and total risk for the CPA and rezone.

**Table 2.1-7
Community Plan Amendment and Rezone Maximum Unmitigated Incremental Increase in Risk for Off-Site Sensitive Receptors**

Sensitive Receptor	Maximum Cancer Risk (#-in-one million) ^a		Chronic Risk Hazard Index (HI) ^b	
	Residential	School	Residential	School
Foundations/ Concrete Pour	0.73	0.02	0.007	0.001
Building Construction	5.93	0.22	0.011	0.002
Architectural Coating	1.35	0.04	0.003	<0.001
Paving	0.84	0.03	0.016	0.003
Max CPAR ^c	8.82	0.31	0.036	0.007
Cumulative Risk ^d	14.28	0.47	0.03	0.01
Significance Threshold	10	10	1.0	1.0
Exceeds Threshold?	Yes	No	No	No

a. Cancer risk values based on actual exposure over the duration of construction activities. The construction risk was calculated assuming a child was born at the beginning of the project construction, and would be exposed during the duration of construction activities. The third trimester exposure was excluded as construction is anticipated to take less than two years and exposure from birth to two years results in greater cancer risk, therefore excluding the third trimester exposure results in a more conservative risk analysis.

b. Chronic risk HI values based on the annual maximum levels of DPM divided by the corresponding DPM reference exposure levels (RELs).

c. Note, totals may not add due to rounding and the fact that for each construction phase the maximum impacted receptor may be different. CPAR = Community Plan Amendment and Rezone

d. Cumulative risk is the total risk from the Community Plan Amendment and Rezone and the Site Demolition and Preparation. Totals from Max CPAR and Max D&P may not add due to rounding and the fact that each individual construction phase may have a different maximum impacted receptor.

SOURCE: ESA 2019. (See Appendix D)

The process of assessing health risks and impacts includes a degree of uncertainty. The level of uncertainty is dependent on the availability of data and the extent to which assumptions are relied upon in cases where the data are

incomplete or unknown. All HRAs rely upon scientific studies in order to reduce the level of uncertainty; however, it is not possible to completely eliminate uncertainty from the analysis. Where assumptions are used to substitute for incomplete or unknown data, it is standard practice in performing HRAs to err on the side of health protection in order to avoid underestimating or underreporting the risk to the public by assessing risk on the most sensitive populations, such as children and the elderly.

Operational-Related Health Risk

TACs could be emitted as part of the periodic maintenance operations, cleaning, painting, etc., periodic visits to the project site from delivery trucks and service vehicles. TAC emissions from periodic maintenance operations, cleaning, painting, etc., are expected to be occasional and result in minimal exposure to off-site and on-site sensitive receptors. If operation of the project requires the use of a stationary emission source (such as an emergency back-up generator), such sources are permitted by SDAPCD, and therefore, would result in risk levels below regulatory thresholds. Therefore, operational TAC emissions are anticipated to be less than significant, and no mitigation is required.

Criteria Air Pollutants

Aside from DPM, the operation of heavy-duty vehicles and construction equipment during the grading and building phases of construction can produce substantial amounts of criteria air pollutants, primarily pre-cursor ozone pollutants (ROG and NOX), CO, NO₂, and particulate matter. Since none of these criteria air pollutants would be emitted in sufficient quantity to potentially exceed NAAQS and CAAQS in Table 2.1-4, the emissions are considered minimal, and an ambient air quality analysis was not performed. Therefore, the project would not expose nearby sensitive receptors to a substantial increase in long-term localized pollutant concentrations and the possible chronic impact on human health would be less than significant.

CO Hotspots

Although the San Diego Air Basin is currently an attainment area for CO, environmental review should also consider the localized health effect of CO. The primary mobile-source pollutant of localized concern is CO. CO is a product of incomplete combustion of fossil fuel; unlike ozone, CO is emitted directly out of a vehicle exhaust pipe. Local mobile-source CO emissions near roadway intersections are a direct function of traffic volume, speed, and delay. Transport of CO is limited since it disperses rapidly with distance from the source under normal meteorological conditions. However, under specific meteorological conditions, CO concentrations near roadways and/or intersections may reach unhealthy levels related to local sensitive land uses such as residential units, hospitals, schools, playgrounds, and childcare facilities. Therefore, CO exhaust

emissions can potentially cause a direct, localized CO “hotspot” impact at or near sensitive receptors. A project would expose sensitive receptors to substantial pollutant concentrations if sensitive receptors are placed near CO hotspots, or if it creates CO hotspots near sensitive receptors; i.e., would result in CO emissions that, when added to the ambient concentrations, would exceed a 1-hour concentration of 20 parts per million (ppm) or an 8-hour average of 9 ppm.

According to the City’s Significance Determination Thresholds (City of San Diego 2016), CO hotspot screening should follow current accepted protocol by CARB and/or SDAPCD. SDAPCD does not have localized significance threshold methodology. Given there are no localized adopted thresholds for CO hotspots, guidance was drawn from the County of San Diego Guidelines for Determining Significance, in that, CO hotspots are found to occur at signalized intersections that operate at or below level of service (LOS) E with peak-hour trips for that intersection exceeding 3,000 trips (County of San Diego 2007). However, the project-specific traffic study (Chen-Ryan 2019) identified that existing and future signalized intersections (without the project) operate at LOS E with peak-hour volumes exceeding 3,000 peak-hour volumes for these intersections. The project, in comparison, would contribute minimal additional peak-hour trips for these intersections (Chen-Ryan 2019). Therefore, the potential for the project to cause or contribute to the formation of off-site CO hotspots are evaluated based on prior dispersion modeling of the four busiest intersections in the South Coast Air Basin that has been conducted by the South Coast Air Quality Management District (SCAQMD) for its CO Attainment Demonstration Plan in the SCAQMD Air Quality Management Plan (AQMP) (SCAQMD 2003).

This analysis compares the project intersections with the greatest peak-hour traffic volumes that would be impacted by the project to the intersections modeled by SCAQMD. Project-impacted intersections with peak-hour traffic volumes that are lower than the intersections modeled by SCAQMD, in conjunction with lower background CO levels, would result in lower overall CO concentrations compared to the SCAQMD modeled values in its AQMP.

SCAQMD conducted CO modeling for the 2003 AQMP for the four worst-case intersections in the Air Basin: (a) Wilshire Boulevard and Veteran Avenue; (b) Sunset Boulevard and Highland Avenue; (c) La Cienega Boulevard and Century Boulevard; and (d) Long Beach Boulevard and Imperial Highway. In the 2003 AQMP CO attainment demonstration, SCAQMD notes that the intersection of Wilshire Boulevard and Veteran Avenue is the most congested intersection in Los Angeles County, with an average daily traffic volume of about 100,000 vehicles per day (SCAQMD 2003). This intersection is located near the on- and off-ramps to Interstate 405 in West Los Angeles. Relevant information from the 2003 AQMP CO attainment demonstration relied upon in this assessment is provided in Appendix D of this EIR. The evidence provided in Table 4-10 of

Appendix V of the 2003 AQMP shows that the peak modeled CO concentration due to vehicle emissions at these four intersections was 4.6 ppm (one-hour average) and 3.2 (eight-hour average) at Wilshire Boulevard and Veteran Avenue.

Based on the proposed project's traffic study (Appendix I) (Chen-Ryan 2019) under future plus project conditions, the intersection of Balboa Avenue and Charger Boulevard would have a maximum traffic volume of approximately 61,846 ADT, which are assumed to operate at very low or idling speeds at a congested roadway intersection. As a result, CO concentrations are expected to be approximately 2.8 (one-hour average) and 2.0 (eight-hour average), which would not exceed the numerical indicators of significance. Total traffic volumes at the maximum impacted intersection would likely have to double to cause or contribute to a CO hotspot impact given that vehicles operating today have reduced CO emissions as compared to vehicles operating in year 2003 when the SCAQMD conducted the AQMP attainment demonstration modeling (SCAQMD 2003). This comparison demonstrates that the project would not contribute to the formation of CO hotspots and that no further CO analysis is required. The impact would be less than significant.

Site Demolition and Preparation

Toxic Air Contaminants

As previously stated, the greatest potential for TAC emissions during the project's building construction would be related to DPM tailpipe emissions associated with the operation of heavy-duty equipment during demolition, excavation and grading activities, building construction, paving and architectural coating. Minor DPM emissions from haul and vendor trucks are also taken into account in the analysis. Construction activities associated with the project would be sporadic, transitory, and short-term in nature.

Construction-Related Health Risk

Table 2.1-8 provides a breakdown of maximum risk per construction phase and total risk for site demolition and preparation activities. As discussed above, significance is based on the cumulative combined risk from site demolition and preparation activities and the CPA and rezone activities (the future residential development). As previously stated and shown in Table 2.1-7, the maximum incremental increase in cancer risk would be up to approximately 14-in-one million for construction risk for residential receptors and 0.4-in-one million for school receptors. Health risk for residential receptors would exceed the SCAQMD significance threshold of 10-in-one million for residential receptors, and therefore, impacts would be potentially significant (**Impact AIR-1**), and **Mitigation Measure AIR-1**, detailed below, would be required.

**Table 2.1-8
Site Demolition and Preparation Maximum Unmitigated Incremental Increase in
Risk for Off-Site Sensitive Receptors**

Sensitive Receptor	Maximum Cancer Risk (#-in-one million) ^a		Chronic Risk Hazard Index (HI) ^b	
	Residential	School	Residential	School
Demolition	1.21	0.036	0.035	0.0060
Site Preparation	1.89	0.056	0.028	0.0048
Grading	1.30	0.038	0.019	0.0033
Trenching	1.06	0.031	0.016	0.0028
Max D&P ^c	5.45	0.16	0.098	0.017
Cumulative Risk ^d	14.28	0.47	0.03	0.01
Significance Threshold	10	10	1.0	1.0
Exceeds Threshold?	Yes	No	No	No

NOTES:

- Cancer risk values based on actual exposure over the duration of construction activities. The construction risk was calculated assuming a child was born at the beginning of the project construction, and would be exposed during the duration of construction activities. The third trimester exposure was excluded as construction is anticipated to take less than two years and exposure from birth to two years results in greater cancer risk, therefore excluding the third trimester exposure results in a more conservative risk analysis.
- Chronic risk HI values based on the annual maximum levels of DPM divided by the corresponding DPM reference exposure levels (RELs).
- Note, totals may not add due to rounding and the fact that for each construction phase the maximum impacted receptor may be different. D&P = Site Demolition and Preparation
- Cumulative risk is the total risk from the Community Plan Amendment and Rezone and the Site Demolition and Preparation. Totals from Max CPAR and Max D&P may not add due to rounding and the fact that each individual construction phase may have a different maximum impacted receptor. See discussion for Table 2.1-7 for details

SOURCE: ESA 2019. (See Appendix D)

The process of assessing health risks and impacts includes a degree of uncertainty. The level of uncertainty is dependent on the availability of data and the extent to which assumptions are relied upon in cases where the data are incomplete or unknown. All HRAs rely upon scientific studies in order to reduce the level of uncertainty; however, it is not possible to completely eliminate uncertainty from the analysis. Where assumptions are used to substitute for incomplete or unknown data, it is standard practice in performing HRAs to err on the side of health protection in order to avoid underestimating or underreporting the risk to the public by assessing risk on the most sensitive populations, such as children and the elderly.

Criteria Air Pollutants

Aside from DPM, the operation of heavy-duty vehicles and construction equipment during the grading and building phases of construction can produce

substantial amounts of criteria air pollutants, primarily pre-cursor ozone pollutants (ROG and NOX), CO, NO₂, and particulate matter. Since none of these criteria air pollutants would be emitted in sufficient quantity to potentially exceed NAAQS and CAAQS in Table 2.1-6, the emissions are considered minimal, and an ambient air quality analysis was not performed. Therefore, the project would not expose nearby sensitive receptors to a substantial increase in long-term localized pollutant concentrations, and the possible chronic impact on human health would be less than significant.

2.1.3.5 Odor Analysis

Issue 5: Create objectionable odors affecting a substantial number of people.

Impact Analysis

Community Plan Amendment and Rezone

Construction

Potential sources that may emit odors during construction activities of the future residential building include the use of architectural coatings and solvents. SDAPCD Rule 67.0 (Architectural Coatings) limits the amount of VOCs from architectural coatings and solvents. Construction equipment typically is not a source of odors. Odors from the combustion of diesel fuel would be minimized by complying with the CARB ATCM that limits diesel-fueled commercial vehicle idling to 5 minutes at any given location. The project would also comply with SDAPCD Rule 51 (Nuisance), which prohibits the emissions of nuisance air contaminants or odorous compounds. Through adherence with mandatory compliance with SDAPCD Rules and State measures, project construction activities and materials would not create objectionable or nuisance odors at nearby air quality sensitive receptors. Impacts with respect to odors during construction of the future development would be less than significant.

Operation

Potential sources that may emit odors during operation of the future development include consumer products and architectural coatings. As mentioned above, the project is subject to SDAPCD Rules 51 and 67.0 to limit the emissions of nuisance air contaminants and VOCs. Through compliance with mandatory SDAPCD Rules, operations would not create objectionable odors and impacts would be less than significant.

Site Demolition and Preparation

The proposed project includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. As

previously detailed, construction equipment typically is not a source of odors. Odors from the combustion of diesel fuel would be minimized by complying with the CARB ATCM that limits diesel-fueled commercial vehicle idling to 5 minutes at any given location. The project would also comply with SDAPCD Rule 51 (Nuisance), which prohibits the emissions of nuisance air contaminants or odorous compounds. Through adherence with mandatory compliance with SDAPCD Rules and State measures, site demolition and preparation activities and materials would not create objectionable or nuisance odors at nearby air quality sensitive receptors. Impacts with respect to odors during site demolition and preparation would be less than significant.

2.1.4 Cumulative Impact Analysis

Cumulative impacts with respect to air quality assess the project's contribution to the cumulative increase in pollutants for which the San Diego Air Basin is listed as non-attainment for State and Federal AAQS. Specifically, these include PM₁₀, PM_{2.5} and ozone precursors of NO_x and VOCs.

A project that has a significant direct impact on air quality with regard to emissions of PM₁₀, PM_{2.5}, NO_x and/or VOCs, would also have a significant cumulatively considerable net increase. In the event direct impacts from a proposed project are less than significant, a project may still have a cumulatively considerable impact on air quality, if the emissions of concern from the proposed project, in combination with the emissions of concern from other proposed projects or reasonably foreseeable future projects within the vicinity of the proposed project, have the potential to contribute to a significant cumulative impact (County of San Diego 2007). When combined with reasonably foreseeable cumulative projects within the vicinity of the project site, the project has the potential to contribute to a significant cumulative impact. As indicated in Issue 2 (see section 2.1.2 above), construction and operational emissions for the proposed project would have a less than significant impact to air quality. Additionally, with the implementation of **Mitigation Measure AIR-1**, criteria pollutant emissions associated with the operation of off road emissions would be further reduced below regional thresholds. Therefore, the project would not substantially contribute to a cumulatively considerable impact. The project would have a less than cumulative considerable impacts to air quality.

2.1.5 Significance of Impacts Prior to Mitigation

The following significant impact related to air quality would occur with project implementation:

Impact AIR-1: Health risk for residential receptors would exceed the SCAQMD significance threshold of 10-in-one million for residential

receptors associated with both future building construction and site demolition and preparation for the proposed project.

2.1.6 Mitigation

AIR-1: Construction Equipment: The project shall require all off-road diesel equipment greater than 50 horsepower (hp) used during construction activities to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a CARB-certified Level 3 Diesel Particulate Filter or equivalent.

2.1.7 Conclusion

The incorporation of **Mitigation Measure AIR-1** would reduce potential cancer and non-cancer risk to offsite sensitive receptors through minimization of DPM emissions from onsite construction equipment. **Table 2.1-9** summarizes the carcinogenic risk and non-carcinogenic risk for the maximum impacted sensitive receptors after implementation of mitigation. As shown in Table 2.1-9, the maximum incremental increase in cancer risk would be up to approximately 3-in-one million for construction risk for residential receptors and 0.1-in-one million for school receptors. With mitigation, risk for residential receptors would not exceed the SCAQMD significance threshold of 10-in-one million for residential or school receptors. The chronic health risk from construction of the project is 0.007 for residential and 0.001 for school receptors, well below the significance threshold of 1. The maximum exposed residential receptor remains located in the residential development directly west of the project site. The maximum exposed school receptor is located on the Mount Everest Academy campus located west of the project site across Mount Everest Boulevard. With the incorporation of Mitigation Measure AIR-1, impacts from air quality would be reduced to less than significant levels.

**Table 2.1-9
Maximum Mitigated Incremental Increase in Risk for Off-Site Sensitive Receptors**

Sensitive Receptor	Maximum Cancer Risk (#-in-one million) ^a		Chronic Risk Hazard Index (HI) ^b

2.2 Hazards and Hazardous Materials

This section provides an assessment of potential impacts related to hazards and hazardous materials that could result from project implementation. Potential impacts addressed in this section include exposure of people or structures to wildland fires, hazardous materials, and interference with emergency response plans.

Comments related to hazards and hazardous materials received during the public comment period for the Notice of Preparation (NOP) include concerns regarding the existing power and gas lines located near the project site. The NOP and all comment letter received in response to the NOP are included in Appendix A of this EIR.

2.2.1 Existing Conditions

2.2.1.1 Historic Property Uses

According to the Phase I Environmental Site Assessment (ESA) (Appendix G) that was prepared for the proposed project, historical aerial photographs of the project site date back to 1903 (Ninyo & Moore 2019). The project site was vacant and undeveloped from as early as 1903 until 1964, when a portion of the present-day single-story building on the western portion of the site was constructed. From 1964, various roads and structures were constructed in the project area, including Mount Etna Drive, Genesee Avenue, and the SDG&E natural gas pipeline followed by two commercial structures south of the project site and single family residences to the west. By 1966, three gasoline service stations operated at the northwest, northeast, and southeast corners of the Mount Etna Drive and Genesee Avenue intersection. In the 1970s, there was additional commercial development along Genesee Avenue, and in 1975 an addition was added to the southeastern portion of the single-story building at the project site. In the 1980s, the adjacent properties to the north and northwest of the site were developed with commercial uses and office buildings. In 1994, the attached garage is present at the southwestern portion of the project site, and in 1996, the two-story warehouse portion of the site is visible in aerial photographs. The project site has maintained its current configuration since 1996.

2.2.1.2 Hazardous Materials Evaluation

The Phase I ESA prepared for the project site included a review of information and documents pertaining to the site, an evaluation of federal, state, and local databases, a site reconnaissance of the subject property and surrounding areas, interviews, a review of prior reports, aerial photographs, and topographic, geologic, and hydrogeologic maps. The Phase I ESA found no evidence of any

existing recognized environmental conditions in connection with the project site. The results of the Phase I ESA are summarized below.

Database Evaluation of the Project Site

An environmental database record search was completed for the project site and surrounding area as to identify information pertaining to documented and/or suspected releases of regulated hazardous substances and/or petroleum products within specified search distances (up to one mile). The records search determined that the project site was listed in several environmental databases searched, as detailed in **Table 2.2-1**.

**Table 2.2-1
Environmental Database Listing for the Project Site**

Former Occupants	Database	Summary
San Diego County Regional Crime Lab	ECHO FINDS LOP LUST RCRA-SQG SAM SWEEPS UST UST	The project site was occupied by the Crime Lab from 1980 to 2018. The facility has a closed unauthorized release case (H14261-001) associated with a diesel fuel release that impacted soil only. The case was opened in September 1991 and closed in May 1995. The facility is also listed as a small quantity generator of waste and is listed as having an active 1,000-gallon motor fuel underground storage tank (UST).
Clairemont Hospital	Hist Cortese	Prior to the County's acquisition of the property, the site was occupied by Clairemont Hospital. This occupant is listed in the database; however, no other information is provided.

Source: Ninyo & Moore 2019

According to the Phase I ESA, County of San Diego Department of Environmental Health (DEH) documentation shows that a 1,000-gallon diesel UST and associated contaminated soil was removed from the project site in 1991. A 500-gallon UST was removed in 1992 and replaced with a 4,000-gallon diesel UST. This 4,000-gallon UST currently remains on the project site. During UST testing, no failed tests were found or other evidence of release.

Records for the project site include DEH compliance inspection reports from 1996 to 2019. According to the December 2018 compliance inspection report, the San Diego County Regional Crime Lab (Crime Lab) moved to a new facility in August 2018 and the facility's hazardous and medical wastes were disposed of in August and November 2018.

Database Evaluation of Off-Site Properties

Off-site properties appeared on various regulatory agency databases. Off-site properties were evaluated as to their potential to impact soil and/or groundwater at the project site. The following five properties were interpreted to represent a potential environmental concern to the project site, based on their proximity to the project site, the nature of the database on which they were listed, and/or the southwest direction of groundwater flow in the site vicinity.

1. Rite Aid #5653 is located at 5270 Balboa Avenue, approximately 146 feet southeast from the project site. The property is a conditionally exempt small quantity generator that generates pharmaceutical and photo-processing type wastes. Inspection reports did not indicate evidence of a spill or release at the property. Based on the type of business (retail) and the absence of spills or releases, this property is not a concern to the project site at this time.
2. Mobil T0220/Former Mobil Station is located at 4302 Genesee Avenue, approximately 168 feet northeast of the project site. The property was a former gasoline station which has a closed unauthorized release case, which was closed in October 1986. Four underground storage tanks (USTs) were removed in August 1986. Based on the case close status, the medium affected (soil), and that the primary sources of the release were removed (USTs), this property does not represent an environmental concern to the project site at this time.
3. Genesee Shell/Shell Oil Service Station/Cagles Genesee Shell is located at 4303 Genesee Avenue, approximately 327 feet northeast of the project site. The former gasoline service station is listed under multiple databases regarding a UST release that impacted soil and groundwater. USTs were removed, along with impacted soil and water. Multiple groundwater monitoring wells were installed to monitor groundwater and soil vapor. The case was closed in August 2018 with residual soil and groundwater contamination left in place under a Low Threat UST Case Closure Policy.
4. Circle K Store is located at 4360 Genesee Avenue, approximately 449 feet north of the project site. The property includes an active gasoline station with a closed unauthorized release case. Groundwater monitoring wells and remedial wells were installed on the property. Based on the case closure and distance from the project site, this property does not represent a concern to the project site at this time.
5. Chevron/Balboa Avenue is located at 5401 Balboa Avenue, approximately 489 feet southeast of the project site. The property contains a former gasoline service station with four closed unauthorized release cases that impacted soil and groundwater. Based on the case closed status, remediation performed, and the distance to the project site, this property does not represent a concern to the project site at this time.

According to the project-specific Phase I ESA, the properties listed above were not considered to be environmental concerns to the project site because of the distance and orientation between the off-site properties and the project site, direction of groundwater flow, and the case status (Ninyo & Moore 2019).

Site Reconnaissance

A physical inspection of the project site was conducted on March 20, 2019. The following on-site observations were made:

- Petroleum products observed include hydraulic fluid in the elevator equipment reservoir and diesel fuel associated with the backup generator. Hazardous substances include cooling tower chemicals and refrigerants used for the cooling system.
- Access covers associated with a 4,000-gallon UST were observed adjacent to the emergency generator.
- A pad-mounted transformer was observed on the south-central portion of the project site. No evidence of leaks was observed.
- A sump and pump were observed in a landscaped area near the main entrance to the building.
- The warehouse portion of the project site contains a hydraulic freight elevator. No leaks or staining were observed adjacent to the hydraulic reservoir.
- Three 55-gallon poly drums were observed adjacent to the cooling towers.

2.2.1.3 Airports

The nearest public airport is Montgomery Field Airport, located approximately 2 miles east of the project site. The nearest private airstrip is the Marine Corps Air Station (MCAS) Miramar, located approximately 2.9 miles northeast of the project site. According to the Montgomery Field Airport Land Use Compatibility Plan (ALUCP) and the MCAS Miramar ALUCP, the project site is not within any safety zones for either airport (ALUC 2010; ALUC 2008). However, the project site is located within Montgomery Field and MCAS Miramar's Airport Influence Area denoted as Review Area 2 (ALUC 2010; 2008). According to both airport's ALUCPs, Review Area 2 encompasses the portions of the airspace protection and overflight notification areas not included in Review Area 1. For both airports, Review Area 2 would not require any ALUC review, nor is it subject to any noise or safety zone standards. However, any new construction would need a "determination of no hazard to air navigation" from the FAA prior to issuance of a building permit by the City of San Diego.

2.2.1.4 Wildfires

Both the State of California and County of San Diego map the Fire Hazard Severity Zones within San Diego County. According to the California Department of Forestry and Fire Protection (CALFIRE), the Fire Hazard Severity Zones are based on an evaluation of fire history, existing and potential fuel, flame length, blowing embers, terrain, weather, and the likelihood of buildings igniting. The project site is not within a Local Responsibility Area Fire Hazard Severity Zone, also referred to as “very high fire hazard severity zone” (CALFIRE 2009).

2.2.1.5 Electric Magnetic Fields

The project site is adjacent to a 50-foot wide SDG&E easement with two sets of overhead transmission lines. Extremely low frequency (ELF) electric and magnetic fields (EMF) include alternating current (AC) fields and other electromagnetic, nonionizing radiation from 1 Hz to 300 Hz. Power lines, like electrical wiring and electrical equipment, produce ELF fields at 60 Hz (OSHA 2016). This EIR does not consider EMF in the context of the CEQA analysis of potential environmental impacts because: [1] there is no agreement among scientists that EMF creates a potential health risk, and [2] there are no defined or adopted CEQA standards for defining health risk from EMF.

2.2.2 Regulatory Setting

2.2.2.1 Federal

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) establishes a framework for national programs to achieve environmentally sound management of both hazardous and non-hazardous wastes. RCRA was designed to protect human health and the environment, reduce/eliminate the generation of hazardous waste, and conserve energy and natural resources. RCRA also promotes resource recovery techniques. The Hazardous and Solid Waste Amendments of 1984 both expanded the scope of RCRA and increased the level of detail in many of its provisions. The Hazardous Waste Management subchapter of the RCRA deals with a variety of issues regarding the management of hazardous materials including the export of hazardous waste, State programs, inspections of hazardous waste disposal facilities, enforcement, and the identification and listing of hazardous waste.

Comprehensive Environmental Response, Compensation, and Liability Act

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980 was enacted to protect water, air, and land resources from the risks created by past chemical disposal practices such as abandoned and

historical hazardous waste sites. Through the act, the U.S. Environmental Protection Agency (EPA) was given power to seek out the parties responsible for any release and assure their cooperation in the cleanup. CERCLA created a tax on the chemical and petroleum industries that went to a trust fund for cleaning up abandoned or uncontrolled hazardous waste sites, commonly known as the Superfund. CERCLA also authorized the revision of the National Contingency Plan, which provided the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, or contaminants. The National Contingency Plan also established the National Priority List of sites, which are known as Superfund sites.

Superfund Amendments and Reauthorization Act

The Superfund Amendments and Reauthorization Act (SARA) is intended primarily to address the emergency management of accidental releases, and to establish State and local emergency planning committees responsible for collecting hazardous material inventory, handling and transportation data. Specifically, under Title III of SARA, a nationwide emergency planning and response program established reporting requirements for businesses that store, handle or produce significant quantities of hazardous or acutely toxic substances as defined under federal laws. Title III of SARA also requires each state to implement a comprehensive system to inform federal authorities, local agencies and the public when significant quantities of hazardous or acutely toxic substances are stored or handled at a facility. These data are made available to the community at large under the “right-to-know” provision, with SARA also requiring annual reporting of continuous emissions and accidental releases of specified compounds.

Toxic Substances Control Act

The Toxic Substances Control Act of 1976 was enacted by Congress to give the U.S. EPA the ability to track over 75,000 industrial chemicals currently produced or imported into the United States. The U.S. EPA repeatedly screens these chemicals and can require reporting or testing of any that may pose an environmental or human health hazard. It can ban the manufacture and import of those chemicals that pose an unreasonable risk. The U.S. EPA also has mechanisms in place to track the thousands of new chemicals that industry develops each year with either unknown or dangerous characteristics and it control these chemicals as necessary to protect human health and the environment. The act supplements other federal statutes, including the CAA and the Toxics Release Inventory under Emergency Planning and Community Right-to-Know Act.

U.S. Department of Transportation Hazardous Materials Transport Act (49 USC 5101)

The United States Department of Transportation (USDOT), in conjunction with the United States Environmental Protection Agency (USEPA), is responsible for enforcement and implementation of federal laws and regulations pertaining to transportation of hazardous materials. The Hazardous Materials Transportation Act of 1974 directs the USDOT to establish criteria and regulations regarding the safe storage and transportation of hazardous materials. Code of Federal Regulations (CFR) 49, 171–180, regulates the transportation of hazardous materials, types of material defined as hazardous, and the marking of vehicles transporting hazardous materials.

2.2.2.2 State

California Division of Occupational Safety and Health

The California Division of Occupational Safety and Health (Cal/OSHA) is responsible for developing and enforcing workplace safety standards and assuring worker safety in the handling and use of hazardous materials. Among other requirements, Cal/OSHA requires many entities to prepare injury and illness prevention plans and chemical hygiene plans and provides specific regulations to limit exposure of construction workers to lead. Under Cal/OSHA, contractors are required to comply with handling and use requirements to increase worker safety and reduce the possibility of spills, and to prepare an emergency response plan to respond to accidental spills.

Government Code Section 65962.5, Cortese List

The provisions in Government Code Section 65962.5 are commonly referred to as the “Cortese List” (after the Legislator who authored and enacted the legislation). The list, or a project site’s presence on the list, has bearing on the local permitting process, as well as on compliance with CEQA. The comprehensive “Cortese List” includes the following facilities or sites:

- Hazardous waste and substances sites from Department of Toxic Substances Control’s (DTSC’s) EnviroStor database.
- Leaking UST (LUST) sites from State Water Resources Control Board’s (SWRCB’s) GeoTracker database.
- Solid-waste disposal sites identified by SWRCB with waste constituents above hazardous waste levels outside the waste management unit.
- “Active” Cease and Desist Orders and Cleanup and Abatement Orders sites from the SWRCB.
- Hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

California Fire Code

The California Fire Code, Article 80, includes specific requirements for the safe storage and handling of hazardous materials. These requirements reduce the potential for a release of hazardous materials and for mixing of incompatible chemicals, and specify the following design features to reduce the potential for a release of hazardous materials that could affect public health or the environment:

- Separation of incompatible materials with a noncombustible partition.
- Spill control in all storage, handling, and dispensing areas.
- Separate secondary containment for each chemical storage system.

The California Fire Code, Article 79, includes specific requirements for the safe storage and handling of flammable and combustible liquids. Specific requirements address fire protection; prevention and assessment of unauthorized discharges; labeling and signage; protection from sources of ignition; specifications for piping, valving, and fittings; maintenance of above-ground tanks; requirements for storage vessels, vaults, and overfill protection; and requirements for dispensing, using, mixing, and handling of flammable and combustible liquids.

Title 22 of the California Code of Regulations & Hazardous Waste Control Law, Chapter 6.5

Department of Toxic Substances Control (DTSC) is responsible for implementing the RCRA program as well as California's own hazardous waste laws, which are collectively known as the Hazardous Waste Control Law. Under the Certified Unified Program Agency (CUPA) program, California Environmental Protection Agency (CalEPA) has in turn delegated enforcement authority of State law to the County for regulating hazardous waste producers or generators. The DTSC regulates the generation, transportation, treatment, storage and disposal of hazardous waste under RCRA and the California Hazardous Waste Control Law. Like RCRA, Title 22 imposes "cradle to grave" regulatory systems for handling hazardous waste in a manner that protects human health and the environment. CalEPA has delegated some of its authority under the Hazardous Waste Control Law to county health departments and other CUPAs, including the DEH.

California Health and Safety Code

The CalEPA/DTSC has established rules governing the use of hazardous materials and the management of hazardous wastes. California Health and Safety Code Section 25531, et seq., incorporate the requirements of SARA and the federal CAA as they pertain to hazardous materials. Under the California Accidental Release Prevention Program (CalARP), California Health and Safety

Code Section 25531 to 25545.3), certain businesses that store or handle more than 500 pounds, 55 gallons or 200 cubic feet (for gases) of acutely hazardous materials at their facilities are required to develop and submit a Risk Management Plan (RMP) to the appropriate local authorities, the designated local administering agency and the USEPA for review and approval. The RMP is intended to satisfy federal “right-to-know” requirements and provide basic information to regulators and first responders, including identification/quantification of regulated substances used or stored on site, operational and safety mechanisms in place (including employee training), potential on- and off-site consequences of a release and emergency response provisions.

Pursuant to California Health and Safety Code Chapter 6.11, CalEPA established the Unified Hazardous Waste and Hazardous Materials Management Regulatory Program (Unified Program), which consolidated a number of existing State programs related to hazards and hazardous materials. The Unified Program also allows the designation of Certified Unified Program Agencies (CUPAs) to implement associated State regulations within their jurisdiction. For businesses within the County, Hazardous Materials Business Plans (HMBPs) are submitted to and approved by the County of San Diego Hazardous Materials Division, which is the local CUPA as outlined below under County requirements.

California Human Health Screening Levels

The California Human Health Screening Levels (CHHSLs) are concentration thresholds established by CalEPA for 54 hazardous chemicals in soil or soil gas of concern for risks to human health. The CHHSLs were developed using standard exposure assumptions and chemical toxicity values published by the USEPA and CalEPA. The CHHSLs can be used to screen sites for potential human health concerns where releases of hazardous chemicals to soils have occurred. Under most circumstances, the presence of a chemical in soil, soil gas, or indoor air at concentrations below the corresponding CHHSL can be assumed to not pose a significant health risk to people who may live or work at the site.

2.2.2.3 Local

San Diego County Office of Emergency Services

The San Diego County Office of Emergency Services is the designated lead agency for emergency response within the County and coordinates the implementation of the San Diego County Emergency Operations Plan. The County of San Diego has instituted a regional notification system that will be able to send telephone notifications to residents and businesses within San Diego County impacted by, or in danger of being impacted by, an emergency or disaster. This system, called AlertSanDiego, will be used by emergency response personnel to notify those homes and businesses at risk with

information on the event and/or actions to take, such as evacuation (AlertSanDiego 2016).

Multi-Jurisdictional Hazard Mitigation Plan

The Multi-Jurisdictional Hazard Mitigation Plan (MJHMP) is a countywide plan that identifies risks and ways to minimize damage by natural and manmade disasters. The MJHMP is a comprehensive resource document that serves many purposes, including enhancing public awareness, creating a decision tool for management, promoting compliance with state and federal program requirements, enhancing local policies for hazard mitigation capability, and providing inter-jurisdictional coordination. The MJHMP identifies goals and objectives for each of the 21 participating jurisdictions, including the City of San Diego. The following City of San Diego goals and objectives from the MJHMP are relevant to the proposed project.

Goal 1: Promote public understanding, support, and demand for hazard mitigation.

Goal 2: Improve hazard mitigation coordination and communication with federal, state, local, and tribal governments.

Objective 2.B: Encourage other organizations to incorporate hazard mitigation activities.

City of San Diego General Plan

The City of San Diego General Plan Public Facilities, Services and Safety Element addresses facilities and services that are publicly managed and have a direct influence on the location of land uses, including fire-rescue, waste management, and disaster preparedness. The following policies from the Public Facilities, Services and Safety Element are relevant to the proposed project.

Policy PF-P.4: Coordinate the development and implementation of a City business continuity plan to ensure the continuity of operations and government in the event of a major disaster or emergency.

Policy PF-P.6: Coordinate citywide emergency management and disaster planning and response through the integration of key City departments into the preparedness and decision-making process.

2.2.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's California Environmental Quality Act (CEQA) Significance Determination Thresholds (City of San Diego 2016).

Accordingly, a significant utilities and service systems impact would occur if the project would:

Issue 1: Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including when wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands; or

Issue 2: Result in hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within a quarter-mile of an existing or proposed school; or

Issue 3: Impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan; or

Issue 4: Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or environment; or

Issue 5: Expose people to toxic substances, such as pesticides and herbicides, some of which have long-lasting ability, applied to the soil during previous agricultural uses; or

Issue 6: Result in a safety hazard for people residing or working in a designated airport influence area; or

Issue 7: Result in a safety hazard for people residing or working within two miles of a private airstrip or a private airport or heliport facility that is not covered by an adopted Airport Land Use Compatibility Plan.

2.2.3.1 Wildland Fires

Issue 1: Would the project expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including when wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Impact Analysis

Community Plan Amendment and Rezone

The project includes an amendment to the CMCP and a rezone of the project site that would allow for a residential development with a maximum of 404 units. According to CALFIRE, the project site is not within a very high fire hazard severity zone (CALFIRE 2009). The project site itself is developed with the vacant Crime Lab facility and is immediately surrounded by existing development. The future development would be required to be developed consistent with the California Fire Code, as adopted by the City, and would be

constructed with a protective system of sprinklers and fire hydrant services. As detailed in Chapter 1.0, Project Description, the future development would include three potential access options. All driveways would be constructed per the City Fire Marshal's Standards and would provide adequate access throughout the project site for emergency responders. As the future development would be required to demonstrate consistency with all applicable California Fire Code regulations and would be reviewed by the City Fire Code Official prior to permit issuance, impacts regarding risk of loss, injury, or death involving wildland fires would be less than significant.

Site Demolition and Preparation

In addition to the amendments to the CMCP and rezone, the proposed project also includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. As previously stated, the project site is not within a very high fire hazard severity zone (CALFIRE 2009). Demolition and site preparation activities would be required to adhere to all state and local construction standards, including Cal/OSHA and the California Fire Code. Therefore, impacts related to risk of loss, injury, or death involving wildland fires would be less than significant.

2.2.3.2 Hazards Near Schools

Issue 2: Would the project result in hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within a quarter-mile of an existing or proposed school?

Impact Analysis

Community Plan Amendment and Rezone

The closest school to the project site is Mount Everest Academy, an independent study K through 12 school located approximately 0.1 mile to the west of the project site. The project includes amendments to the CMCP and a rezone of the project site that would allow for a future residential development. Construction of the future residential development would likely involve the transport, storage, use, and disposal of small amounts of hazardous materials, including fuels (e.g., gasoline, diesel), hydraulic fluids, oils, lubricants, paint, and other similarly related materials in varying quantities on the project site. Operation of the future development would include the storage, use, and disposal of a variety of commonly used hazardous chemicals, such as toners, lubricants, and kitchen and restroom cleaners as well as relatively small quantities of fuels, oils, and other petroleum-based products. While the project site is located within one-quarter mile of a school, the anticipated use, transport, and disposal of

hazardous materials during construction and operation would be in relatively small quantities commonly associated with typical home, landscaping, and commercial uses. The use of these hazardous materials would typically be sporadic in frequency and localized, with limited exposure such that there would be no substantive emissions of hazardous materials that would adversely affect students or staff. In addition, the proposed project would be required to comply with all applicable federal, state, and local regulations and guidelines for storing and handling hazardous materials. Therefore, impacts related to exposure of schools to hazardous materials would be less than significant. The potential for hazardous emissions exposure during construction of the future residential development is addressed in Section 2.1, Air Quality, of this EIR.

Site Demolition and Preparation

The proposed project includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. As detailed in Chapter 1.0, Project Description, the proposed site demolition and preparation would include the removal of the existing 4,000-gallon UST. Any required soil remediation would be completed following demolition activities, in compliance with applicable federal, state, and local regulations. A portion of the existing single-story building on the western portion of the site was constructed in 1964. Asbestos and lead materials were phased out in the mid to late 1970s, and therefore, due to the age of the existing building, asbestos and lead materials could be present in the structure. As detailed in Chapter 1.0, Project Description, demolition of the existing structure would require administrative approvals, including but not limited to a Debris Management Plan, Haul Route Plan, Asbestos Abatement Plan, and Lead Hazards Notification. Due to removal of the UST and potential to encounter contaminated media, including asbestos and lead materials, the proposed project would result in a potentially significant impact related to handling hazardous materials within a quarter-mile of a school (**Impact HAZ-1**). In accordance with the Phase I ESA (Appendix G), **Mitigation Measure HAZ-1**, detailed below, would be required, ensuring that handled hazardous materials during construction would not adversely affect nearby students or staff. The potential for hazardous emissions exposure during site demolition and preparation is addressed in Section 2.1, Air Quality, of this EIR.

2.2.3.3 Emergency Plans

Issue 3: Would the project impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Impact Analysis

Community Plan Amendment and Rezone

The project site is located in a developed area with existing access to major roads that provide routes for emergency evacuation. Primary evacuation routes consist of the major interstates, highways, and prime arterials within the City. The project site is served by the San Diego Police Department (SDPD) and San Diego Fire-Rescue Department (SDFD). As further detailed within Section 3.6, Public Services, of this EIR, SDPD and SDFD would continue to serve the project site under the proposed project. The future development would be required to meet all requirements for access and ingress/egress of emergency vehicles, in accordance with the California Fire Code and City Municipal Code requirements. However, construction of the future development could include driveway reconfiguration, which could require lane closures and interfere with emergency response services and evacuation routes. Therefore, due to the potential for lane closures, the proposed project would result in a potentially significant impact related to interfering, even temporarily, with emergency access (**Impact HAZ-2**), and **Mitigation Measure HAZ-2**, detailed below, would be required.

Site Demolition and Preparation

The proposed project would include demolition of existing buildings and site preparation. These activities would not require lane closures, and is not anticipated to interfere, even temporarily, with emergency access. As previously stated, SDPD and SDFD would continue to serve the project site during site demolition and preparation. Therefore, the proposed project would not impair implementation of, or physically interfere with, the City's emergency evacuation plan, and impacts would be less than significant.

2.2.3.4 Hazardous Sites

Issue 4: Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section

65962.5 and, as a result, create a significant hazard to the public or environment?

Impact Analysis

Community Plan Amendment and Rezone

A project-specific Phase I ESA was prepared for the project site (Appendix G). As discussed above in Section 2.2.1.2, the project site was identified on several environmental databases searched due to previous uses on the project site. The project site was first occupied by the Clairemont Hospital, which was listed in the databases searched, but no other information on hazardous materials was provided. From 1980 to 2018, the project site was occupied by the Crime Lab facility. According to the database search, the facility has a closed unauthorized release case associated with a diesel fuel release that impacted soil only. The case was opened in September 1991 and closed in May 1995. In addition, DEH documentation shows that a 1,000-gallon diesel UST and associated contaminated soil was removed from the project site in 1991. A 500-gallon UST was removed in 1992 and replaced with a 4,000-gallon diesel UST. This 4,000-gallon UST currently remains on the project site. During UST testing, no failed tests were found or other evidence of release. The Phase I ESA found no evidence of any existing recognized environmental conditions in connection with the project site.

Off-site properties were also evaluated in the Phase I ESA, which appeared on various regulatory agency databases. Neighboring properties were not considered to be environmental concerns to the project site due to the distance and orientation between the off-site properties and the project site, direction of groundwater flow, and the case status. Future development of the project site would require compliance with all applicable federal, state, and local standards related to hazardous materials sites. Therefore, future development of the project site would result in a less than significant impact related to being located on a site which is included on a list of hazardous materials sites.

Site Demolition and Preparation

As previously detailed, the project site was identified on several environmental databases searched due to previous uses on the project site, including the Clairemont Hospital and Crime Lab facility. As detailed in Chapter 1.0, Project Description, the proposed site demolition and preparation would include the removal of the existing 4,000-gallon UST. Any required soil remediation would be completed following demolition activities, in compliance with applicable federal, state, and local regulations. However, since the project site is listed on several database searches and includes areas of known previous contamination, grading and other soil disturbance activities could encounter contaminated media or other

unknown contamination or hazards. Therefore, due to removal of the UST and potential to encounter contaminated media, the proposed project would result in a potentially significant impact related to being located on a site which is included on a list of hazardous materials site compiled pursuant to Government Code Section 65962.5 (**Impact HAZ-3**). In accordance with the Phase I ESA (Appendix G), **Mitigation Measure HAZ-1**, detailed below, could be required.

2.2.3.5 Pesticides and Herbicides

Issue 5: Would the project expose people to toxic substances, such as pesticides and herbicides, some of which have long-lasting ability, applied to the soil during previous agricultural uses?

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

As detailed above in Section 2.2.1.1, according to the project-specific Phase I ESA, historical aerial photographs of the project site date back to 1903. From 1903 until 1964, the project site was vacant and undeveloped until a portion of the present-day single-story building on the western portion of the site was constructed. In 1975 an addition was added to the southeastern portion of the single-story building at the project site, and in the mid-1990s the project site was constructed in its current configuration with an attached garage and two-story warehouse. No history of agricultural use is documented on the project site. Therefore, the proposed project would not expose people to toxic substances, such as pesticides and herbicides applied to the soil during previous agricultural uses, and no impact would occur.

2.2.3.6 Airport Influence Area

Issue 6: Would the project result in a safety hazard for people residing or working in a designated airport influence area?

Issue 7: Would the project result in a safety hazard for people residing or working within two miles of a private airstrip or a private airport or heliport facility that is not covered by an adopted Airport Land Use Compatibility Plan?

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

As detailed above in Section 2.2.1.3, the nearest public airport is Montgomery Field Airport, located approximately 2 miles east of the project site. The nearest private airstrip is the MCAS Miramar, located approximately 2.9 miles northeast of the project site. According to the Montgomery Field ALUCP and the MCAS

Miramar ALUCP, the project site is not within any safety zones for either airport (ALUC 2010; ALUC 2008). However, the project site is located within Montgomery Field and MCAS Miramar's Airport Influence Area denoted as Review Area 2 (ALUC 2010; ALUC 2008). For both airports, Review Area 2 would not require any ALUC review, nor is it subject to any noise or safety zone standards. However, the future development would be required to have a determination of no hazard to air navigation from the FAA prior to issuance of a building permit by the City of San Diego. Compliance with FAA regulations would be required, therefore, impacts regarding safety hazards for people residing or working in the vicinity of a public or private airport would be less than significant.

2.2.4 Cumulative Impact Analysis

The cumulative context for hazardous materials consists of the areas that could be affected by proposed project activities as well as areas affected by other cumulative projects whose activities could directly or indirectly affect the activities on the surrounding area.

Future cumulative development could require the use, transport, storage, and disposal of hazardous materials. However, hazardous materials releases tend to be largely limited in geographic extent to the project site and cumulative impacts would only occur at adjacent sites. In addition, all cumulative projects would be required to comply with all relevant and applicable federal, state, and local laws and regulations that pertain to the transport, storage, and disposal of hazardous materials and waste. Impacts to related school sites, listing on a hazardous materials site, surrounding airports, and wildland fires are site-specific and not cumulative in nature because impacts related to individual projects would be site specific and not additive. Potential risks identified for the proposed project or on cumulative project sites would not affect potential risks elsewhere in the project area. Therefore, the proposed project would not be cumulatively considerable, and impacts would be less than significant.

A cumulative impact related to emergency evacuation plans would occur if development on the project site and surrounding developments would not provide adequate access to regional evacuation routes. As discussed above, the proposed project would not interfere with the implementation of any regional response to evacuation plans. Demolition activities and construction of the future development would not require road closures, or affect any of the existing road networks surrounding the project site. Therefore, the proposed project would not be cumulatively considerable, and impacts would be less than significant.

2.2.5 Significance of Impacts Prior to Mitigation

The following significant impacts related to hazards and hazardous materials would occur with project implementation:

Impact HAZ-1: Due to removal of the UST and potential to encounter contaminated media, including asbestos and lead materials, the proposed project would handle hazardous materials within a quarter-mile of a school.

Impact HAZ-2: Due to the potential for lane closures during construction of the future development, the proposed project could temporarily interfere with emergency access.

Impact HAZ-3: The project site is listed on several database searches pursuant to Government Code Section 65962.5 and includes areas of known previous contamination. Grading and other soil disturbance activities could encounter contaminated media or other unknown contamination or hazards.

2.2.6 Mitigation

HAZ-1: Soil Contamination, Lead, and Asbestos

Recommendations. Demolition of the existing building and construction of the future development shall follow the findings and recommendations of the Phase I ESA, including:

- In future development of the project site, preparation and implementation of a soil management plan shall be used during construction activities near areas of known contamination. Where contamination is known or suspected, and where grading or other soil disturbance activities could encounter contaminated media, undocumented USTs, or other unknown contamination or hazards, implementation of a soil management plan provides protocols to address hazardous conditions, if encountered, in accordance with local, state, and federal regulations.
- Soil sampling shall be performed at the time of the UST removal to evaluate whether an unauthorized release has occurred.
- A worker health and safety plan shall be prepared and implemented.
- Asbestos-containing materials and lead-based paint shall be evaluated prior to razing of the site building.

HAZ-2: Traffic Control Plan. Prior to the start of construction of the future development, the construction contractor shall prepare a Traffic

Control Plan to the satisfaction of the City Engineer. The Traffic Control Plan shall show all signage, striping, delineated detours, flagging operations, and any other devices that will be used during construction to guide motorists, pedestrians, and bicyclists through the construction area and allow for adequate access and circulation to the satisfaction of the City Engineer. The Traffic Control Plan shall be prepared in accordance with the City's traffic control guidelines and shall be prepared to ensure that emergency access will be continuously provided.

2.2.7 Conclusion

The proposed project would not result in impacts related to risk of loss, injury, or death involving wildland fires. In addition, the project site has no history of previous agricultural uses, and no impact would occur related to exposing people to toxic substances such as pesticides and herbicides. Compliance with FAA regulations would be required, therefore, impacts regarding safety hazards for people residing or working in the vicinity of a public or private airport would be less than significant.

Due to removal of the existing UST and potential to encounter contaminated media, including asbestos and lead materials, the proposed project would result in a potentially significant impact related to handling hazardous materials within 0.25 miles of a school (**Impact HAZ-1**). In addition, since the project site is listed on several database searches and includes areas of known previous contamination, grading and other soil disturbance activities could encounter contaminated media or other unknown contamination or hazards. Therefore, due to removal of the UST and potential to encounter contaminated media, the proposed project would result in a potentially significant impact related to being located on a site which is included on a list of hazardous materials site compiled pursuant to Government Code Section 65962.5 (**Impact HAZ-3**). However, with implementation of **Mitigation Measure HAZ-1**, demolition of the existing building and construction of the future development would implement recommendations of the Phase I ESA, and impacts would be reduced to less than significant.

Construction of the future development could include driveway reconfiguration, which could require lane closures and interfere with emergency response services and evacuation routes. Due to the potential for lane closures during construction of the future development, the proposed project could temporarily interfere with emergency access (**Impact HAZ-2**). However, with implementation of **Mitigation Measure HAZ-2**, a Traffic Control Plan would be required to be prepared and implemented.

This page intentionally left blank

2.3 Noise and Vibration

This section characterizes the ambient noise environment and identifies potential noise and vibration impacts associated with implementation of the proposed project, particularly on any nearby sensitive receptors. The analyses in this section are based on existing conditions, applicable policies, as well as the noise modeling conducted for the project, which is included in Appendix H of this EIR.

Comments related to noise and vibration received during the public comment period for the Notice of Preparation (NOP) included concerns regarding increased ambient noise levels during construction and operation of the project and that the future residential building allowed by the project would generate noise that would interfere with rights for quiet enjoyment within the community of Clairemont Mesa. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to result in noise and vibration impacts. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

2.3.1 Existing Conditions

Noise is generally defined as unwanted sound (i.e., loud, unexpected, or annoying sound). Sound is measured in decibels (dB), on a logarithmic scale ranging from 0 dB corresponding roughly to the threshold of human hearing to 120 to 140 dB corresponding to the threshold of pain. Further, the typical human ear is not equally sensitive to all frequencies of the audible sound spectrum, and as such dB levels are weighted to the human ear's decreased sensitivity to extremely low and extremely high frequencies, expressed as A-weighted decibels (dBA). Noise exposure is a measure of noise over a period of time; a noise level is a measure of noise at a given instant in time. The maximum, instantaneous noise level experienced during a given period of time is expressed as L_{max} . The equivalent sound level (L_{eq}) is used to describe noise over a specified period of time (typically 1-hour), which may also be referred to as the average sound level. The Community Noise Equivalent Level (CNEL) is the average A-weighted noise level during a 24-hour day adjusted with penalties for evening and nighttime noise. Noise attenuates with distance at a rate of – 6 dBA per doubling of distance for stationary point sources (typically including construction noise sources) and – 3 dBA per doubling of distance for mobile line sources (e.g., vehicle traffic on roadways).

The project site is located in the City of San Diego, within the Clairemont Mesa community. The project site is near the intersection of two major roads, Balboa Avenue and Genesee Avenue, and approximately 1.22 miles west of Interstate 805 (I-805), approximately 2.10 miles northeast of I-5, and approximately 1.78 miles south of Highway 52. The project site is currently unoccupied and contains the former San Diego County Regional Crime Lab (Crime Lab) building, with a

surface parking lot previously used for employee parking adjacent to the project site to the west. Areas surrounding the project site are mostly developed with residential, commercial and office uses. The project site is bounded by Mount Etna Drive and single-family residential to the north; commercial development and Genesee Avenue to the east; commercial development, Balboa Avenue, and multi-family residential to the south; and SDG&E surface parking with transmission towers with overhead power lines and single-family residences fronting Mount Castle Avenue, to the west.

The primary existing noise source in the project area is vehicle traffic noise from surrounding and nearby roadways. The nearest airport to the project site is Montgomery Field Airport, approximately 2 miles east of the project site, and Marine Corps Air Station (MCAS) Miramar, approximately 2.9 miles northeast of the project site. Secondary noise sources including activity at adjacent residences; general commercial activities including loading dock/delivery truck activities trash truck pickups, commercial and residential air-conditioning units; and landscape activities.

The existing residences to the west and south of the project site are considered noise-sensitive land uses (NSLU), which are land uses associated with indoor and/or outdoor activities that may be subject to stress and/or significant interference from noise, such as residential dwellings, mobile homes, hotels, motels, hospitals, nursing homes, educational facilities, and libraries. Mount Everest Academy is located approximately 550 feet west of the project site. Industrial and commercial land uses are generally not considered sensitive to noise.

To characterize the existing noise environment at noise sensitive receptors near the project site, one long-term (LT) and four short-term (ST) (15-minute) ambient noise level measurements were conducted at various locations surrounding the project site, as shown in **Figure 2.3-1**. A 15-minute measurement is a reasonable duration for sampling ambient noise levels where vehicle traffic is the dominant source, as traffic noise generally does not vary significantly within an hour. Ambient sound measurements were conducted on Monday and Tuesday, August 5 and 6, 2019 at the following locations:

- LT-1: At the western edge of the SDG&E easement west of the project site and approximately 10 feet east of the 6-foot-high privacy wall of the backyard of single-family residences, approximately 270 feet south of Mount Etna Drive, approximately 150 feet west of the project site.
- ST-1: At the single-family residence along Mount Etna Drive, approximately 100 feet east of the intersection with Mount Castle Avenue, approximately 150 feet northwest of the project site.

- ST-2: At single-family residences along Mount Castle Avenue, approximately 340 feet south of Mount Etna Drive, approximately 320 feet west of the project site.
- ST-3: On the northwestern edge of the commercial parking lot southwest of the project site and approximately 10 feet east of the 6-foot-high privacy wall of the backyard of single-family residences, approximately 500 feet south of Mount Etna Drive, approximately 175 feet southwest of the project site.
- ST-4: At the multi-family residences along the southern side of Balboa Avenue, approximately 500 feet west of its intersection with Genesee Avenue, approximately 450 feet south of the project site.

The results of the short-term and long-term ambient sound measurements are summarized in **Table 2.3-1** and **Table 2.3-2**, respectively. As shown in Table 2.3-1, the measured noise levels ranged from 53.2 dBA L_{eq} at ST2 to 65.7 dBA L_{eq} at ST4, in which the primary noise source was vehicle traffic along the roadways surrounding the project site (Balboa Avenue, Genesee Avenue, and Mount Etna Drive).

Table 2.3-1
Short-Term Measurement Summary

Measurement Locations	Date	Time	Measured Level (Leq ⁽¹⁾ , dBA)	Primary Noise Sources
ST1	8/6/2019	14:19-14:34	56.9	Vehicle traffic
ST2	8/6/2019	14:38-14:53	53.2	Vehicle traffic
ST3	8/6/2019	14:59-15:14	58.5	Vehicle traffic
ST4	8/6/2019	15:21-15:36	65.7	Vehicle traffic

Long-Term Measurement Summary

Measurement Locations	Start Date and Time	End Date and Time	Measured Level (Leq ⁽²⁴⁾ , dBA)
LT1	8/5/2019 14:42	8/6/2019 16:00	50.9

SOURCE: ESA 2019 (Appendix H)

Vibration can be interpreted as energy transmitted in waves through the ground or man-made structures. These energy waves generally dissipate with distance from the vibration source mostly due to geometric spreading. In contrast to noise, ground-borne vibration is not a common environmental problem. Some common sources of ground-borne vibration are trains, heavy trucks on rough roads, and construction activities, such as blasting, pile-driving, and operation of heavy earth-moving equipment.

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings; i.e., structural damage. The root mean square (RMS) amplitude is most frequently used to describe the effect of vibration on the human body; i.e., perception and annoyance. The RMS amplitude is defined as the average of the squared amplitude of the signal. Decibel notation (VdB) is commonly used to measure RMS vibrational motion. The relationship of PPV to RMS velocity is expressed in terms of the “crest factor,” defined as the ratio of the PPV amplitude to the RMS amplitude. PPV is typically a factor of 1.7 to 6 times greater than RMS vibration velocity (Ibid). The decibel notation acts to compress the range of numbers required to describe vibration. Typically, ground-borne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration.

Sensitive receptors for vibration include structures (especially older masonry structures), people, and vibration sensitive equipment. The effects of ground-borne vibration include movement of the building floors, rattling of windows, shaking of items on shelves or hanging on walls, and rumbling sounds. In extreme cases, the vibration can cause structural damage to buildings, however, is not a factor for most projects, with the occasional exception of blasting and pile-driving during construction. Human annoyance from vibration often occurs when the vibration levels exceed the threshold of human perception by only a small margin, which would be well below the structural damage threshold for normal buildings.

2.3.2 Regulatory Setting

2.3.2.1 Federal

Federal Transit Administration

Although the FTA standards are intended for federally funded mass transit projects, the impact assessment procedures and criteria included in the FTA Transit Noise and Vibration Impact Assessment Manual (May 2018) are routinely used for projects proposed by local jurisdictions, including the County and City of San Diego. The potential for vibration damage can vary depending on the

building category of the nearest buildings to the potential construction area. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.5 inch per second (in/sec) peak particle velocity (PPV) is considered safe and would not result in any construction vibration damage. For a non-engineered timber and masonry building, the construction vibration damage criterion is 0.2 in/sec PPV.

2.3.2.2 State

California Noise Control Act

Sections 46000-46080 of the California Health and Safety Code find that excessive noise is a serious hazard to the public health and welfare and that exposure to certain levels of noise can result in physiological, psychological, and economic damage. It also finds that there is a continuous and increasing bombardment of noise in the urban, suburban, and rural areas. The California Noise Control Act declares that the State of California has a responsibility to protect the health and welfare of its citizens by the control, prevention, and abatement of noise. It is the policy of the State to provide an environment for all Californians free from noise that jeopardizes their health or welfare.

California Code of Regulations

Interior noise levels for habitable rooms are regulated by Title 24 of the California Code of Regulations (CCR), California Noise Insulation Standards. Title 24, Chapter 12, Section 1207.4, of the California Building Code (CBC) requires that interior noise levels attributable to exterior sources not exceed 45 CNEL in any habitable room within a residential structure. A habitable room is a room used for living, sleeping, eating, or cooking. Bathrooms, closets, hallways, utility spaces, and similar areas are not considered habitable rooms for this regulation (24 CCR 1207 2016).

For nonresidential structures, Title 24, Chapter 12, Section 1207.5 refers to 2016 California Green Building Standards (CALGreen), Chapter 5 – Nonresidential Mandatory Measures, Division 5.5 – Environmental Quality, Section 5.507 – Environmental Comfort, Subsection 5.507.4 – Acoustical Control. Pursuant to these standards, all nonresidential building construction shall employ building assemblies and components that achieve a composite sound transmission class rating of at least 50 or shall otherwise demonstrate that exterior noise shall not result in interior noise environment where noise levels exceed 50 A-weighted equivalent decibels (dB(A) L_{EQ}) in occupied areas during any hour of operation (24 CCR 1207.5 2016).

California Department of Health Services

The State of California does not have statewide standards for environmental noise, but the California Department of Health Services (DHS) has established guidelines for evaluating the compatibility of various land uses as a function of community noise exposure. The purpose of these guidelines is to maintain acceptable noise levels in a community setting for different land use types. Noise compatibility by different land use types is categorized into four general levels: “normally acceptable,” “conditionally acceptable,” “normally unacceptable,” and “clearly unacceptable.” For instance, a noise environment ranging from 50 dBA to 65 dBA CNEL is considered to be “normally acceptable” for multi-family residential uses, while a noise environment of 75 dBA CNEL or above is considered to be “clearly unacceptable” for multi-family residential uses.

In addition, California Government Code Section 65302(f) requires each county and city in the state to prepare and adopt a comprehensive long-range general plan for its physical development, with Section 65302(g) requiring a noise element to be included in its general plan. The noise element must: identify and appraise noise problems in the community; recognize Office of Noise Control guidelines; and analyze and quantify current and projected noise levels.

The state has also established noise insulation standards for new multi-family residential units, hotels, and motels that would be subject to relatively high levels of transportation-related noise. These requirements are collectively known as the California Noise Insulation Standards (Title 24, California Code of Regulations). The noise insulation standards set forth an interior standard of 45 dBA CNEL in any habitable room. Where such units are proposed in areas subject to exterior noise levels greater than 60 dBA CNEL, the standards require an acoustical analysis demonstrating how dwelling units have been designed to meet the interior standard. Title 24 standards are typically enforced by local jurisdictions through the building permit application process.

California Department of Transportation

While there are no state or California Department of Transportation (Caltrans) regulatory vibration standards, the *Caltrans Transportation and Construction Vibration Guidance Manual* (Caltrans 2013) provides guidance and procedures that “should be treated as screening tools for assessing the potential for adverse vibration effects related to human perception, structural damage, and equipment. This document is not an official policy, standard, specification, or regulation, and should not be used as such.” The Caltrans vibration criteria for assessing structural damage and human perception are shown in **Table 2.3-3** and **Table 2.3-4**, respectively (Caltrans 2013).

**Table 2.3-3
Caltrans Vibration Structural Damage Potential Criteria**

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

NOTE: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

SOURCE: Caltrans 2013.

**Table 2.3-4
Caltrans Vibration Perception Potential Criteria**

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.9	0.10
Severe	2.0	0.4

NOTE: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

SOURCE: Caltrans 2013.

2.3.2.3 Local

City of San Diego General Plan

The Noise Element of the City's General Plan provides goals and policies to guide compatible land uses and incorporate of noise attenuation measures for

new uses, which was amended by the City's 2015 General Plan Amendments (City of San Diego 2015). The overall goal of the Noise Element is controlling noise to acceptable levels at its source. However, when this is not feasible, the City applies additional measures to limit the effect of noise on future land uses, which include spatial separation, site planning, and building design techniques that address noise exposure and the insulation of buildings to reduce interior noise levels.

Specific policies of the Noise Element applicable to the project include noise and land use compatibility; motor vehicle traffic noise; commercial and mixed-use activity noise; construction, refuse vehicles, parking lot sweepers, and public activity noise, and noise attenuating measures.

NE-A.1. Separate excessive noise-generating uses from residential and other noise-sensitive land uses with a sufficient spatial buffer of less sensitive uses.

NE-A.2. Assure the appropriateness of proposed developments relative to existing and future noise levels by consulting the guidelines for noise-compatible land use (shown on Table 3.10-6) to minimize the effects on noise-sensitive land uses.

NE-A.3. Limit future residential and other noise-sensitive land uses in areas exposed to high levels of noise.

NE-A.4. Require an acoustical study consistent with acoustical study guidelines or proposed developments in areas where the existing or future noise level exceeds or would exceed the "compatible" noise level thresholds as indicated on the Land Use - Noise Compatibility Guidelines, so that noise mitigation measures can be included in the project design to meet the noise guidelines.

NE-B.1. Encourage noise-compatible land uses and site planning adjoining existing and future highways and freeways.

NE-B.3. Require noise reducing site design, and/or traffic control measures for new development in areas of high noise to ensure that the mitigated levels meet acceptable decibel limits.

NE-B.4. Require new development to provide facilities which support the use of alternative transportation modes such as walking, bicycling, carpooling and, where applicable, transit to reduce peak-hour traffic.

NE-B.7. Promote the use of berms, landscaping, setbacks, and architectural design where appropriate and effective, rather than conventional wall barriers to enhance aesthetics.

NE-E.1. Encourage the design and construction of commercial and mixed-use structures with noise attenuation methods to minimize excessive noise to residential and other noise-sensitive land uses.

NE-E.2. Encourage mixed-use developments to locate loading areas, parking lots, driveways, trash enclosures, mechanical equipment, and other noisier components away from the residential component of the development.

NE-E.3. Encourage daytime truck deliveries to commercial uses abutting residential uses and other noise-sensitive land uses to minimize excessive nighttime noise unless there is no feasible alternative or there are overriding transportation benefits by scheduling deliveries at other hours.

NE-E.4. Encourage commercial/entertainment uses to utilize operational measures that minimize excessive noise where it affects abutting residential and other noise-sensitive uses.

NE-E.5. Implement night and daytime on-site noise level limits to address noise generated by commercial uses where it affects abutting residential and other noise-sensitive uses.

NE-E.6. Encourage disclosure of potential noise problems for mixed-use and residential developments adjacent to commercial/entertainment uses at the time of sale.

NE-G.1. Implement limits on the hours of operation for non-emergency construction and refuse vehicle and parking lot sweeper activity in residential areas and areas abutting residential areas.

NE-G.2. Implement limits on excessive public noises that a person could reasonably consider disturbing and/or annoying in residential areas and areas abutting residential areas.

NE-I.1. Require noise attenuation measures to reduce the noise to an acceptable noise level for proposed developments to ensure an acceptable interior noise level, as appropriate, in accordance with California's noise insulation standards (CCR Title 24).

NE-I.2. Apply CCR Title 24 noise attenuation measures requirements to reduce the noise to an acceptable noise level for proposed single-family, mobile homes, senior housing, and all other types of residential uses not addressed by CCR Title 24 to ensure an acceptable interior noise level, as appropriate.

NE-I.3. Consider noise attenuation measures and techniques addressed by the Noise Element, as well as other feasible attenuation measures not addressed as potential mitigation measures, to reduce the effect of noise on future residential and other noise-sensitive land uses to an acceptable noise level.

Land use and noise compatibility guidelines are provided for proposed land use development projects. **Table 2.3-5** specifies land use compatibility and exterior/interior noise standards for the land uses included in the project. As

shown in Table 2.3-5, multiple dwelling units are “compatible” with exterior noise levels up to 60 dBA CNEL, and “conditionally compatible” in areas with exterior noise levels of 60 to 70 dBA CNEL, provided that the building structure attenuates interior noise levels to 45 dBA CNEL.

**Table 2.3-5
Land Use and Noise Compatibility Guidelines**

Land Use Category	Exterior Noise Exposure (dBA CNEL)			
	60	65	70	75
Residential - Multiple Dwelling Units		45	45	
Institutional – Educational facilities other than Kindergarten through Grade 12 educational facilities		45	45	
Retail/Commercial/Offices			50	50

	Compatible	Indoor Uses	Standard construction methods should attenuate exterior noise to an acceptable indoor noise level.
		Outdoor Uses	Activities associated with the land use may be carried out.
	Conditionally Compatible	Indoor Uses	Building structure must attenuate exterior noise to the indoor noise level indicated by the number (45 or 50) for occupied areas.
		Outdoor Uses	Feasible noise mitigation techniques should be analyzed and incorporated to make the outdoor activities acceptable.
	Incompatible	Indoor Uses	New construction should not be undertaken.
		Outdoor Uses	Severe noise interference makes outdoor activities unacceptable.

SOURCE: City of San Diego 2015.

The City assumes that standard construction techniques would provide a 15 dB reduction of exterior noise levels to an interior receiver (City of San Diego [2008] 2015). With these criteria, standard construction could be assumed to result in interior noise levels of 45 dBA CNEL or less when exterior sources are 60 dBA CNEL or less. When exterior noise levels are greater than 60 dBA CNEL, and the interior threshold is 45 dBA CNEL, consideration of specific construction techniques is required.

The City of San Diego does not address vibration in the Noise Element of the General Plan.

City of San Diego Noise Ordinance

Section 59.5.0401 (Noise Ordinance) of the San Diego Municipal Code (SDMC) prohibits noise exceeding the applicable 1-hour average sound level limits for various land uses in the city on or beyond the boundaries of a property on which the noise is produced. **Table 2.3-6** presents the applicable noise limits.

**Table 2.3-6
City of San Diego Applicable Noise Limits**

Land Use	One-Hour Average Sound Level (dB)		
	7 a.m. to 7 p.m.	7 p.m. to 10 p.m.	10 p.m. to 7 a.m.
Single Family Residential	50	45	40
Multi-Family Residential (Up to a maximum density of 1/2000)	55	50	45
All other Residential	60	55	50
Commercial	65	60	60
Industrial or Agricultural	75	75	75

SOURCE: City of San Diego 2019.

Section 59.5.0404(a) states that it shall be unlawful for any person, between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day, or on legal holidays as specified in Section 21.04 of the SDMC, with exception of Columbus Day and Washington's Birthday, or on Sundays, to erect, construct, demolish, excavate for, alter, or repair any building or structure in such a manner as to create disturbing, excessive, or offensive noise unless a permit has been applied for and granted beforehand by the Noise Abatement and Control Administrator.

Additionally, Section 59.5.404(b) states that it shall be unlawful for any person, including the City of San Diego, to conduct any construction activity so as to cause, at or beyond the property lines of any property zoned residential, an average sound level greater than 75 decibels during the 12-hour period from 7 a.m. to 7 p.m.

The City of San Diego does not address vibration in its Municipal Code.

City of San Diego Significance Determination Thresholds

The City's CEQA Significance Determination Thresholds outline the criteria and thresholds used to determine whether project impacts are significant (City of San Diego 2016). Thresholds applicable to the project include traffic noise, stationary

noise generators, sensitive wildlife, construction noise, and noise/land use compatibility, which have been used in this analysis for identifying significant noise impacts applicable to the project.

Traffic Noise Significance Thresholds are provided for structures affected by traffic noise to determine interior and exterior noise impacts from traffic-generated noise in the City's Table K-2 (City of San Diego 2016), as shown in **Table 2.3-7**.

**Table 2.3-7
Traffic Noise Significance Thresholds (dBA CNEL)**

Structure of Proposed Use That Would Be Impacted by Traffic Noise	Interior Space	Exterior Usable Space^a	General Indication of Potential Significance
Single-family detached	45 dB	65 dB	Structure or outdoor usable area ^b is <50 feet from the center of the closest (outside) lane on a street with existing or future ADTs >7,500
Multi-family, school, library, hospital, day care center, hotel, motel, park, convalescent home	Development Services Department (DSD) ensures 45 dB pursuant to Title 24	65 dB	
Office, church, business, professional uses	n/a	70 dB	Structure or outdoor usable area is <50 feet from the center of the closest lane on a street with existing or future ADTs >20,000
Commercial, retail, industrial, outdoor spectator sports uses	n/a	75 dB	Structure or outdoor usable area is <50 feet from the center of the closest lane on a street with existing or future ADTs >40,000

^a If a project is currently at or exceeds the significance thresholds for traffic noise described above and noise levels would result in less than a 3-dB increase, then the impact is not considered significant.

^b Exterior usable areas do not include residential front yards or balconies unless the areas such as balconies are part of the required useable open space calculation for multi-family units.

SOURCE: City of San Diego 2016.

As shown in Table 2.3-7, the noise level at exterior usable open space for single- and multi-family residences should not exceed 65 dBA CNEL and for commercial or retail space should not exceed 75 dBA CNEL. Table 2.3-7 further specifies that outdoor usable areas would generally indicate a significant noise impact if located closer than 50 feet from the centerline of the closest traffic lane of a street with existing or future daily traffic volumes greater than 20,000 ADT.

Noise significance thresholds for noise generated by adjacent stationary sources such as heating, ventilation, and air conditioning (HVAC) units are identified in the City's Noise Ordinance. A project that would generate noise levels at the

property line that exceed the City's Noise Ordinance Standards, Property Line Noise Level Limits (Table 2.3-6), is considered potentially significant. Although noise levels could be consistent with the City's Noise Ordinance Standards, a noise level above 65 dBA CNEL at the residential property line could be considered a significant environmental impact.

Noise Significance Thresholds for construction noise are provided by the construction hours and noise level limits identified in the City's Noise Ordinance (City of San Diego 2019). Construction activity is prohibited between the hours of 7:00 p.m. of any day and 7:00 a.m. of the following day, or on legal holidays. Construction noise levels measured at or beyond the property lines of any property zoned residential shall not exceed an average sound level greater than 75 dB during the 12-hour period from 7:00 a.m. to 7:00 p.m. (City of San Diego 2010). Additionally, where temporary construction noise would substantially interfere with normal business communication, or affect sensitive receptors, such as day care facilities, a significant noise impact may be identified.

Noise Significance Thresholds for noise/land use compatibility are provided in Table K-4 (City of San Diego 2016), which shows multi-family residential exterior incompatible above 60 dBA CNEL, and updated in the City's General Plan Noise Element (City of San Diego 2015), as shown in Table 2.3-4, exterior "compatible" noise level standard for multi-family residential uses as and as compatible up to 60 dBA CNEL, and conditionally compatible up to 70 dBA CNEL. The City assumes that standard construction design techniques would provide a 15-dB reduction of exterior noise levels to interior noise levels of 45 dBA CNEL or less when exterior sources are 60 dBA CNEL or less. When exterior noise levels are greater than 60 dBA CNEL, consideration of specific construction techniques is required. Multifamily dwelling units with exterior noise levels of up to 70 dBA CNEL are "conditionally compatible" provided that the building structure attenuates interior noise levels to 45 dBA CNEL (City of San Diego 2015).

2.3.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's California Environmental Quality Act (CEQA) Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant noise impact would occur if the project would:

- Issue 1:** Result in a significant increase in the existing ambient noise levels; or
- Issue 2:** Result in the exposure of people to noise levels which exceed the City's adopted noise ordinance or are incompatible with Table K-4; or

- Issue 3:** Expose people to current or future transportation noise levels that exceed standards established in the Transportation Element of the General Plan; or
- Issue 4:** Expose people to, or generate excessive groundborne vibration or groundborne noise levels; or
- Issue 5:** Result in land uses which are not compatible with aircraft noise levels as defined by an adopted airport Comprehensive Land Use Plan

2.3.3.1 Ambient Noise

Issue 1: Would the project result in a significant increase in the existing ambient noise levels?

Impact Analysis

Community Plan Amendment and Rezone

Construction

The proposed project includes an amendment to the Clairemont Mesa Community Plan (CMCP) and rezone of the project site that would allow for a future residential development. Construction of the future development would include construction noise that is considered temporary and short term (i.e., its effect on the environment ceases upon conclusion of construction activities). A substantial temporary increase in ambient noise levels is defined as a direct project-related increase of 10 dBA L_{eq} or greater, based on the noise standard that a 10 dBA increase is perceived by the human ear as twice as loud (FTA 2018). This FTA threshold is used for evaluating the project's impacts on ambient noise levels.

Construction of the future development would require the use of heavy equipment during foundation concrete pour, building construction/architectural coating, and paving stages at the project site. During each stage of building development, a variety of equipment would be used. As such, construction activity noise levels on and near the project site would fluctuate depending on the type, number, and duration of use of various pieces of construction equipment operating at a given time. Multiple pieces of construction equipment would not operate at the same point on the project site at all times. Accordingly, and to present a conservative analysis, instead of assuming the equipment is on average located in the center of the project construction area (which is a typical assumption in construction noise analyses), it has been assumed that the various equipment types would operate at different distances from the sensitive receptors to represent equipment operating across the entire site (see Appendix H for construction noise calculations).

Types of construction equipment expected to be used during project construction could produce maximum noise levels of 75 dBA L_{max} to 90 dBA L_{max} at a reference distance of 50 feet from the noise source according to the Federal Highway Administration (FHWA) reference noise levels. **Table 2.3-8** lists the construction equipment type assumed for project construction and FHWA reference noise levels (L_{max}) at 50 feet. These maximum noise levels would occur when equipment is operating at full power. Construction equipment does not typically operate at full power consistently throughout the duration of a given construction stage. The estimated usage factor for the equipment is also shown in Table 2.3-8 and represents the percentage of the time during a given construction stage that a piece of equipment is expected to be operational. The usage factors are based on FHWA's RCNM User's Guide (FHWA 2006).

**Table 2.3-8
Project Construction Equipment and Associated Noise Levels**

Type of Equipment	Reference Noise Level at 50 Feet, L_{max}	Estimated Usage Factor (%)
Air Compressor	78	40
Backhoe	78	40
Concrete Saw	90	20
Cranes	81	16
Excavator	81	40
Forklift	75	10
Front End Loader	79	40
Generator Sets	81	50
Graders	85	40
Other Equipment	85	50
Paver	77	50
Pumps	81	50
Roller	80	20
Rubber Tired Loader	79	40
Scraper	84	40
Tractor/Loader/Backhoe	80	25
Vacuum Street Sweeper	82	10

SOURCE: FHWA 2006.

Over the course of a construction day, the highest noise levels would be generated when multiple pieces of construction equipment would be being operated concurrently. The project's estimated construction noise levels were calculated for a scenario in which all construction equipment was assumed to be operating simultaneously and located at the construction area nearest the affected receptors to present a conservative impact analysis. The estimated noise levels at the off-site sensitive receptors were calculated using the FHWA's RCNM, and were based on a maximum concurrent operation of construction equipment (i.e., air compressors, cranes, tractor/loader/backhoe, forklift, generator sets, welders, etc.), which is considered a worst-case evaluation because the project would typically use less overall equipment on a daily basis, and as such would generate lower noise levels. In addition, the noise levels were estimated including the assumption that the building construction phase (i.e., air compressors, cranes, forklift, street sweeper) would overlap into the paving phase (i.e., grader, paver, roller) and the architectural coating phase (i.e., air compressor). **Table 2.3-9** shows the estimated construction noise levels that would attenuate with distance at the nearest off-site sensitive uses during a peak day of construction activity at the project site, including, the existing 6-foot-high privacy wall at the backyard of the single-family residences and the surface parking lot on the SDG&E easement to the west of the project site, which provides barrier attenuation estimated at approximately 5 dBA for the residences west of the project site.

As shown in Table 2.3-9, daytime construction noise levels would result in predicted increases in ambient noise levels ranging from approximately 0 to 14.1 dBA Leq at the receptor locations. As previously discussed, the increase (i.e., net change) in ambient levels determined at the nearest noise sensitive receptors (e.g., residences) is typically considered substantial when the increase is 10 dBA Leq or greater, as a change in sound level of 10 dB is recognized as "twice as loud" (FTA, 2018). Therefore, the increases at ST-1, ST-2, and ST-3 of approximately 14.1, 11.8, and 11.5 dBA Leq, respectively, would be greater than a 10 dBA increase by approximately 4.1, 1.8, and 1.5 dBA Leq, respectively. Therefore, the temporary significant increases in ambient noise levels above existing conditions during construction of the future development would potentially occur at ST-1, ST-2, and ST-3, and would be considered significant impact (**Impact NOI-1**).

**Table 2.3-9
Construction Phase Noise Levels – Community Plan Amendment and Rezone**

Off-Site Sensitive Land Uses ^a	Location	Existing Noise Level (dBA L _{eq})	Nearest Distance from Construction Activity to Noise Receptor (ft.) ^b	Estimated Construction Noise Levels (dBA L _{eq}) at Residential boundary	Net Change from Existing Noise Levels (dBA L _{eq})	Significant Increase (>10 dBA)?
ST-1	Northwest of the Project Site along Mount Etna Drive	56.9	150	71	14.1	Yes
ST-2	West of the Project Site along Mount Castle Ave	53.2	320	65	11.8	Yes
ST-3	Southwest of the Project Site at property line of adjacent homes	58.5	175	70	11.5	Yes
ST-4	South of the Project Site at corner of Balboa Avenue and Balboa Way	65.7	450	62	0	No

^a The distance represents the nearest construction area on the project site to the property line of the off-site receptor.

^b The daytime construction noise levels were estimated including assumption that there will be some building construction phase overlap into the Paving phase. Concrete pour noise levels provided for occurring off-hours without daytime construction.

SOURCE: ESA 2019 (Appendix H)

Operation

Operational noise generated by the future residential development would mainly result from mobile sources and stationary sources, such as rooftop HVAC units. As discussed in Issue 3 below, operational noise from mobile sources would not increase noise levels by greater than 3 dBA at any roadway segment and the difference in noise level would be indistinguishable. Furthermore, any rooftop mechanical units would be subject to the SDMC Section 59.5.0401 of the Noise Ordinance, which specifies maximum one-hour average sound level limits that are the maximum noise levels allowed at any point on or beyond the property boundaries due to activities occurring on the property. Future building design of rooftop HVAC units including orientation and shielding would be subject to the Noise Ordinance regulations and therefore would be limited to the noise levels established in the ordinance. Therefore, project operation of the future residential development would not increase the overall ambient noise levels and impacts would be less than significant.

Site Demolition and Preparation

Prior to the redevelopment of the project site in accordance with the CPA and rezone, the County would demolish the existing unoccupied buildings and related facilities on-site, dispose of demolition debris, conduct rough grading of the site, and stub out all existing utilities connections (i.e., capping of utility lines with protective plugs or caps) to the project site boundary. Site demolition and preparation activities would require the use of heavy equipment, grading/excavation, drainage/utilities/trenching, foundation concrete pour, building construction/architectural coating, and paving stages at the project site. During each stage of demolition and site preparation activities, a variety of equipment would be used. As such, construction activity noise levels on and near the project site would fluctuate depending on the type, number, and duration of use of various pieces of construction equipment operating at a given time. Multiple pieces of construction equipment would not operate at the same point on the project site at all times. Accordingly, and to present a conservative analysis, instead of assuming the equipment is on average located in the center of the project construction area (which is a typical assumption in construction noise analyses), it has been assumed that the various equipment types would operate at different distances from the sensitive receptors to represent equipment operating across the entire site (see Appendix H for construction noise calculations).

The types of construction equipment expected to be used during site demolition and preparation could produce maximum noise levels of 75 dBA L_{max} to 90 dBA L_{max} at a reference distance of 50 feet from the noise source according to FHWA reference noise levels. Table 2.7-8 above lists the construction equipment type assumed for site demolition and preparation activities (except pavers) and FHWA reference noise levels (L_{max}) at 50 feet. As previously detailed, these maximum noise levels would occur when equipment is operating at full power. Construction equipment does not typically operate at full power consistently throughout the duration of a given construction stage. The estimated usage factor for the equipment is also shown in Table 2.7-8 and represents the percentage of the time during a given construction stage that a piece of equipment is expected to be operational. The usage factors are based on FHWA's RCNM User's Guide (FHWA 2006).

As previously detailed, the estimated noise levels at the off-site sensitive receptors were calculated using the FHWA's RCNM, and were based on a maximum concurrent operation of equipment, which is considered a worst-case evaluation because the project would typically use less overall equipment on a daily basis, and as such would generate lower noise levels.

Table 2.3-10 shows the estimated construction noise levels that would attenuate with distance at the nearest off-site sensitive uses during a peak day of construction activity at the project site. In addition, the 6-foot-high privacy wall at

the backyard of single-family residences and the surface parking lot to the west of the project site was estimated to provide barrier attenuation of approximately 5 dBA for the residences west of the project site.

**Table 2.3-10
Construction Phase Noise Levels – Site Demolition and Preparation**

Off-Site Sensitive Land Uses ^a	Location	Existing Noise Level (dBA L _{eq})	Nearest Distance from Construction Activity to Noise Receptor (ft.) ^b	Estimated Construction Noise Levels (dBA L _{eq}) at Residential Boundary	Net Change from Existing Noise Levels (dBA L _{eq})	Significant Increase (>10 dBA)?
ST-1	Northwest of the Project Site along Mount Etna Drive	56.9	150	69	12.1	Yes
ST-2	West of the Project Site along Mount Castle Ave	53.2	320	64	10.8	Yes
ST-3	Southwest of the Project Site at property line of adjacent homes	58.5	175	68	9.5	No
ST-4	South of the Project Site at corner of Balboa Avenue and Balboa Way	65.7	450	61	0	No

^a The distance represents the nearest construction area on the project site to the property line of the off-site receptor.

^b The daytime construction noise levels were estimated including assumption that there will be some phase overlap.

SOURCE: ESA 2019 (Appendix H)

As shown in Table 2.3-10, daytime construction noise levels would result in predicted increases in ambient noise levels ranging from 0 to 12.1 dBA Leq at receptor locations. As previously discussed, the increase (i.e., net change) in ambient levels determined at the nearest noise sensitive receptors (e.g., residences) is typically considered substantial when the increase is 10 dBA Leq or greater, as a change of 10 dB is recognized as “twice as loud.” (FTA 2018). Therefore, the increases of at ST-1 and ST-2 of 12.1 and 10.8 dBA Leq, respectively, as shown in Table 2.3-10, exceeds a 10 dBA increase by 2.1 and 0.8 dBA Leq, respectively. Therefore, the temporary significant increases in ambient noise levels above existing conditions during site demolition and preparation would potentially occur at ST-1 and ST-2, and would be considered a significant impact (**Impact NOI-1**).

2.3.3.2 Noise Ordinance

Issue 2: Would the project result in the exposure of people to noise levels which exceed the City's adopted noise ordinance or are incompatible with Table K-4?

Noise impacts may be significant if the project would expose people to noise levels that exceed the City's adopted Noise Ordinance for construction and operation. The City's Noise Ordinance limits construction noise levels to not exceed 75 dBA L_{eq} at the affected residential property line during the allowable construction hours of 7 a.m. to 7p.m., and 45 dBA L_{eq} from 7 p.m. to 10 p.m.).

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

Construction

Project construction (including both construction of the future development and site demolition and preparation activities) would occur during the hours specified in the SDMC, between 7:00 a.m. and 7:00 p.m. Construction activity is prohibited on legal holidays as specified in Section 21.04 of the SDMC, with exception of Columbus Day and Washington's Birthday, and on Sundays.

Construction activities occurring under each of the construction phases (i.e., demolition and clearing, excavation, foundation, erection, and finishing) would require the use of heavy equipment (e.g., excavators, backhoes, loaders, graders, bore/drill rigs, compactors, cranes, etc.) along with the use of smaller power tools, generators, and other sources of noise. During each construction phase there would be a different mix of equipment operating and noise levels would vary based on the amount of equipment in operation and the location of each activity. Construction activity noise levels at the site would therefore fluctuate depending on the particular type, number, and duration of use of the various pieces of construction equipment. Table 2.3-9 and Table 2.3-10 above presents the typical maximum noise levels (dBA L_{eq}) generated by construction phases.

The closest noise-sensitive receiver (single-family residence) is located approximately 150 feet from the project site. The construction phases generating the highest noise levels would be approximately 71 dBA L_{eq} at ST-1, as shown in Table 2.3-9. Construction noise levels at all other receptors would also be below the City's 75 dBA L_{eq} significance threshold established by the City's Noise Ordinance. Therefore, construction noise would not exceed the City's adopted Noise Ordinance and impacts would be less than significant.

Operation

As discussed in Issue 1, above, operation of the future development would be subject to the City's Noise Ordinance standards that limit operational noise to a maximum level within the property boundaries. Roadway noise levels would increase noise levels by a maximum of 1.2 dBA and ambient noise level changes would be indistinguishable by the human ear. Therefore, operational noise associated with the future development would not exceed the City's Noise Ordinance and impacts would be less than significant.

2.3.3.3 General Plan

Issue 3: Would the project expose people to current or future transportation noise levels that exceed standards established in the Transportation Element of the General Plan?

Noise impacts may be significant if the project would expose people to current or future transportation noise levels that exceed standards established in the Transportation Element of the General Plan (interior standard of 45 dBA CNEL residential; exterior standard of 65 dBA CNEL residential).

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

Off-Site Construction

Construction truck trips associated with construction of the future development and associated with site demolition and preparation activities would occur throughout the construction period. Haul trucks would travel on approved truck routes designated within the city. Given the project site's proximity to I-5 and I-805, heavy truck traffic would take the most direct route to the appropriate freeway ramps. An estimated maximum of approximately 170 daily worker vehicle trips and approximately 79 concrete truck trips would occur per day (up to approximately 21 worker trips and 10 concrete truck trips per hour) during the building construction activities. The building construction activities would generate the maximum number of trucks trips. Trucks would exit the project site from Genesee Avenue and turn right and head southbound, head east on Balboa Avenue, and merge on to the I-805 on-ramp. Alternatively, vehicles could head west on Balboa Avenue and merge onto the I-5 on-ramp. Construction worker vehicle trips would be dispersed along various roadways and would contribute a very small number of vehicle trips when compared to existing traffic volumes on these same roadways and compared to the truck trips along the route. However, for the purposes of this analysis, it was conservatively assumed that construction worker vehicle trips would travel on the same roadway segments as the heavy trucks to evaluate maximum potential offsite noise impacts.

As shown in **Table 2.3-11** the project’s truck trips and worker trips would generate maximum noise levels of approximately 55.7 dBA L_{eq} along Genesee Avenue and Balboa Avenue. Therefore, construction of the proposed project would not expose people to transportation noise levels that exceed standards established in the General Plan.

**Table 2.3-11
Estimated Off-Site Construction Traffic Noise Levels**

Roadway Segment	Calculated Traffic Noise Levels On Roadway dBA L_{eq}		
	Construction Traffic	Significance Threshold ^a	Exceed Threshold?
Genesee Ave between Mount Etna Drive and Balboa Ave	55.7	71.7	No
Balboa Ave between Genesee Ave and Shopping Center Driveway	55.7	72.8	No

^a The significance thresholds are the calculated roadway noise levels for the applicable traffic segments

SOURCE: ESA 2019 (Appendix H)

Off-Site Operational Traffic Noise

Operational noise is typically considered permanent, i.e., for the duration of the operation of the constructed facility. A significant permanent increase is conservatively defined as a direct project-related permanent ambient increase of 3 dBA L_{eq} or greater, where exterior noise levels currently exceed the City’s Noise Ordinance noise level limits (i.e., 50 dBA L_{eq} daytime for single-family residential land uses). An increase of 3 dBA is perceived by the human ear as a barely perceptible increase.

Existing roadway noise levels were calculated along various arterial segments adjacent to the project site. Roadway noise attributable to operation of the future residential development was calculated using the traffic noise model previously described and was compared to existing noise levels in the vicinity.

Operational traffic noise levels associated with existing conditions are shown in **Table 2.3-12**. As indicated in the table, the maximum increase in project-related traffic noise levels over existing traffic noise levels would be 1.7 dBA CNEL, which would occur at the roadway segment of Mount Everest Drive south of Mount Alifan Drive. This increase in sound level would be below the significance threshold of 3 dBA CNEL. The increase in sound levels would be lower at the remaining roadway segments analyzed. Accordingly, the project-related noise increases would be less than the applicable threshold. Therefore, operation of the project compared to existing conditions would not result in off-site traffic-

related noise impacts in excess of City standards and impacts would be less than significant.

**Table 2.3-12
Estimated Off-Site Traffic Noise Levels – Existing with Project Conditions**

ESA 2019, Chen Ryan 2019.

Operational traffic noise levels associated with buildout year conditions are shown in **Table 2.3-13**. As indicated in the table, the maximum increase in project-related traffic noise levels over buildout year traffic noise levels would be 1.7 dBA CNEL, which would occur at the roadway segment of Mount Everest Drive south of Mount Alifan Drive. This increase in sound level would be below the significance threshold of 3 dBA CNEL. The increase in sound levels would be lower at the remaining roadway segments analyzed. Accordingly, the project-related noise increases would be less than the applicable threshold. Therefore, operation of the project at the buildout year would not result in off-site traffic-related noise impacts in excess of City standards and impacts would be less than significant.

Operational traffic noise levels associated with future year conditions (2050) are shown in **Table 2.3-14**. As indicated, the maximum increase in project-related traffic noise levels over existing traffic noise levels would be 1.4 dBA CNEL, which would occur at the roadway segment of Mount Everest Drive south of Mount Alifan Drive. This increase in sound level would be below the significance threshold of 3 dBA CNEL. The increase in sound levels would be lower at the remaining roadway segments analyzed. Accordingly, the project-related noise increases would be less than the applicable threshold. Therefore, operation of the project at the future year (2050) would not result in off-site traffic-related noise impacts in excess of City standards and impacts would be less than significant.

2.3.3.5 Groundborne Vibration

Issue 4: Would the project expose people to, or generate excessive groundborne vibration or groundborne noise levels?

Noise impacts may be significant if the project would expose people or structures to construction vibration levels which exceed vibration guidelines for structural

damage and human annoyance. Vibration would have a significant impact if project construction activities cause groundborne vibration levels to exceed the building damage threshold of 0.2 in/sec PPV at receiving structures. Caltrans defines vibration levels of 0.035 in/sec PPV as barely perceptible and is used as the threshold for human annoyance.

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

Groundborne vibration would be generated from heavy construction equipment operation at the project site, which could potentially affect the existing sensitive land uses surrounding the site. The closest vibration-sensitive land use to the project site is the commercial building located approximately 50 feet to the southeast of the project boundary. The nearest residence is located approximately 150 feet to the west of the project boundary.

Project construction (including both construction of the future development and site demolition and preparation activities) would generate varying degrees of ground vibration, depending on the construction procedures and the construction equipment used. The PPV vibration velocities for several types of construction equipment measured at increasing distances are identified in **Table 2.3-15**.

**Table 2.3-15
Vibration Source PPV Levels for Construction Equipment**

Equipment	Approximate PPV (in/sec)			
	50 Feet	75 Feet	100 Feet	150 Feet
Large Bulldozer	0.031	0.017	0.011	0.006
Bore/Drill Rig	0.031	0.017	0.011	0.006
Loaded Trucks	0.027	0.015	0.010	0.005
Jackhammer	0.012	0.007	0.004	0.002
Small Bulldozer	0.001	0.0006	0.0004	0.0002

SOURCE: FTA 2018, ESA 2019.

As shown in Table 2.3-15, the maximum vibration levels at the nearest sensitive receptor 50 feet southeast of the site would be 0.031 in/sec. This is well below the structural damage threshold of 0.2 in/sec and below the barely perceptible level for human annoyance of 0.035 in/sec. Therefore, vibration impacts from project construction would be less than significant.

Project operation would not result in operational sources of vibration causing appreciable groundborne vibration on site or in proximity to structures or people, and impacts would be less than significant.

2.3.3.5 Aircraft Noise Levels

Issue 5: Would the project result in land uses which are not compatible with aircraft noise levels as defined by an adopted airport Comprehensive Land Use Plan?

Community Plan Amendment and Rezone and Site Demolition and Preparation

As previously detailed, the nearest public airport is Montgomery Field Airport, located approximately 2 miles east of the project site. The nearest private airstrip is the MCAS Miramar, located approximately 2.9 miles northeast of the project site. According to the Montgomery Field Airport Land Use Compatibility Plan (ALUCP) and the MCAS Miramar ALUCP, the project site is not within any safety zones for either airport (ALUC 2010; ALUC 2008). However, the project site is located within Montgomery Field and MCAS Miramar's Airport Influence Area denoted as Review Area 2 (ALUC 2010; ALUC 2008). For both airports, Review Area 2 would not be subject to any noise standards. Therefore, the proposed project would not result in land uses which are incompatible with aircraft noise levels. No impact would occur.

2.3.4 Cumulative Impact Analysis

Construction

The potential for cumulative construction noise impacts from on-site construction activities to occur is based on the distance between the project and each of the related cumulative projects. As listed in Table 1-3 of Chapter 1.0, Project Description, of this EIR, there are six related projects identified in the vicinity of the project site. The two closest related projects are the High Tech High Clairemont Campus CUP at 5331 Mount Alifan Drive approximately 1,300 feet from the project site and the Lindbergh-Schweitzer Elementary School project at 4133 Mount Albertine Avenue approximately 3,800 feet from the project site. All other related projects are located at further distances away from the project site and thus would have lesser effects.

The High Tech High Clairemont Campus project involves occupying an already existing building and would not require any construction and thus would not contribute to cumulative noise levels. The Lindbergh-Schweitzer Elementary School project involves relocating a charter school campus to the existing campus and would include construction extending through January 1, 2024. At a distance of 3,800 feet, the Lindbergh-Schweitzer Elementary School project would not contribute to cumulative noise levels at sensitive receptors near the project

site. Therefore, cumulative impacts from construction noise would be less than significant.

Operations

Cumulative off-site operational noise impacts would occur primarily as a result of increased traffic on local roadways due to operation of the project and cumulative projects, as traffic is the greatest source of operational noise in the project area. Cumulative off-site traffic-generated noise impacts were assessed based on a comparison of the future cumulative base traffic volumes (2050) with the project compared to the existing base traffic volumes without the project. The future cumulative base traffic volumes with the project represent an estimate of the ambient background growth, related projects traffic, and the project traffic volumes. Thus, cumulative increase represents the increment by the ambient background growth, related project traffic, and the project traffic volumes over the existing conditions. The results of that comparison are provided in **Table 2.3-16**. Table 2.3-16 shows the project’s contribution to the cumulative noise levels. The maximum cumulative noise increase from the project plus related project traffic would be 2.5 dBA CNEL, which would occur along Mount Everest Drive south of Mount Alifan Drive. This increase in sound level would not exceed the significance thresholds of an increase of 3 or 5 dBA CNEL. As a result, the project’s contribution to off-site traffic-related noise would not be cumulatively considerable and impacts would be less than significant.

**Table 2.3-16
Off-Site Traffic Noise Impacts – Future 2050 Cumulative Increment**

Roadway Segment	Existing Land Uses Located along Roadway Segment	CNEL (dBA)			Exceed Threshold?
		Existing	Future with Project (2050)	Cumulative Increment (B-A)	
		(A)	(B)	(B-A)	
Genesee Avenue n/o Clairemont Mesa Boulevard	Residential/ Commercial	71.9	73.0	1.2	No
between Clairemont Mesa Boulevard and Bannock Avenue	Residential/ Commercial	71.4	72.1	0.7	No
between Bannock Avenue and Chateau Drive	Residential	71.6	72.2	0.6	No

between Cannington Drive and Charger Boulevard	Residential/ Educational	73.9	74.2	0.4	No
between Charger Boulevard and I-805 Southbound Ramps	Residential/ Religious	74.8	75.1	0.3	No
between I-805 Southbound Ramps and I-805 Northbound Ramps	Freeway Overpass	74.4	74.5	0.2	No
e/o I-805 Northbound Ramps	Commercial	74.6	74.8	0.3	No

ESA 2019, Chen Ryan 2019.

As is true for the project, cumulative projects would be subject to compliance with SDMC Section 59.5.0401 of the Noise Ordinance, which specifies maximum one-hour average sound level limits are the maximum noise levels allowed at any point on or beyond the property boundaries due to activities occurring on the property. Cumulative projects would be subject to the Noise Ordinance

regulations and therefore would be limited to the noise levels established in the ordinance. Therefore, cumulative project operation would not increase the overall ambient noise levels and cumulative impacts would be less than significant.

Groundborne Vibration

Due to the rapid attenuation characteristics of groundborne vibration and distance from each of the cumulative projects to the project site, there is no potential for cumulative construction- or operational-period impacts with respect to groundborne vibration. Therefore, potential cumulative groundborne vibration impacts would be less than significant.

2.3.5 Significance of Impacts Prior to Mitigation

The following significant impact related to ambient noise levels would occur during construction of the proposed project:

Impact NOI-1: A temporary increase in ambient noise levels 10 dBA or more above existing (ambient) conditions at off-site sensitive receivers during construction of the future residential housing project would occur (during both construction of the future development and during site demolition and preparation activities), and impacts would be considered significant.

2.3.6 Mitigation

NOI-1: Construction Noise. The following construction noise abatement techniques shall be implemented by the construction contractor to reduce construction-related noise to less than a 10 dBA increase in existing ambient noise levels at nearby noise-sensitive receivers:

- Temporary noise barriers shall be placed to block the line-of-sight between construction equipment operation and the residential land uses in proximity to the proposed project's property line to the north and west. One of the following two options shall be implemented by the construction contractor:
 - a. A temporary noise barrier shall be placed along the entire western property line of the project site and approximately 50 feet to the north from the northwestern corner at a height of 14 feet with noise blankets capable of achieving sound level reductions of at least 8 dBA to block the line-of-sight between construction equipment operations and the offsite noise-sensitive receivers to the south and southwest; or
 - b. A temporary 50-by-50-foot "L-shaped" noise barrier shall be constructed for each small construction area at a height of

14 feet with noise blankets capable of achieving sound level reductions of at least 8 dBA to block the line-of-sight between construction equipment operations and the offsite noise-sensitive receivers.

2.3.7 Conclusion

The proposed project would not result in impacts related to exposure of people or noise levels that exceed the City's adopted Noise Ordinance, exposure of people to current or future transportation noise levels that exceed standards of the General Plan, exposure of people to excessive groundborne vibration, or exposure to incompatible aircraft noise levels.

A temporary substantial increase in ambient noise levels above existing conditions (greater than a 10 dBA increase) at specified off-site sensitive receivers during project construction would potentially occur (during both construction of the future development and during site demolition and preparation activities). However, with implementation of **Mitigation Measure NOI-1**, construction noise levels would be reduced by 8 dBA Leq at the source, thereby, reducing the noise levels at all of the sensitive receptor locations to acceptable levels. With implementation of this mitigation measure, impacts related to construction noise would result in a less than significant impact.

Noise Measurement Locations

2.4 Transportation and Traffic

This section provides an assessment of potential impacts related to transportation that could result from implementation of the proposed project. Information used in this section is from the Transportation Impact Study (TIS), the TIS Addendum, and the VMT Addendum, prepared by Chen Ryan for the proposed project (Chen Ryan 2019), which are included as Appendix I of this EIR.

Comments related to traffic received during the public comment period for the Notice of Preparation (NOP) included concerns related to traffic congestion on surrounding streets and intersection delays. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to create transportation and traffic impacts. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

2.4.1 Existing Conditions

2.4.1.1 *Traffic Study Area*

The study area represents the most likely locations to be impacted by project traffic. Identification of the traffic study area was based on the criteria identified in the City of San Diego's (City's) Traffic Impact Study Manual (1998). Specifically, these criteria require that a traffic study include the following:

- All intersection and roadway segments where the project would add 50 or more peak hour trips in either direction;
- Mainline freeway locations where the project would add 150 or more peak hour trips in either direction; and
- Metered freeway ramps where the Project would add 20 or more peak hour trips.

As shown on **Figure 2.4-1**, the project study area includes 20 intersections (two of which include metered freeway ramps) and 20 roadway segments including Genesee Avenue, Mount Everest Boulevard, Mount Etna Drive, and Balboa Avenue. The proposed project would not contribute enough traffic (150 peak hour trips in a single direction) to require analysis of any mainline freeways.

Traffic counts were conducted at the study area roadway segments and study area intersections in January 2019 when all schools were in session and the weather was dry and normal. This section describes existing daily traffic volumes (24-hour volume counts) and LOS for study area roadway segments and the AM/PM peak hour traffic volumes and LOS for the study area intersections.

Level of Service

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. LOS designations range from A to F, with LOS A representing the best operating conditions (i.e., little to no delay) and LOS F representing the worst operating conditions (i.e., lengthy delay). LOS designation is reported differently for signalized and unsignalized intersections, as well as for roadway segments. The City of San Diego considers LOS D or better during the AM and PM peak hours to be acceptable for intersection and roadway segment LOS.

2.4.1.2 Existing Circulation System

The project site is located in the Clairemont Mesa Community Planning (CMCP) Area in the City, where regional access is provided primarily by I-805. Local access is provided via Genesee Avenue, Mount Everest Boulevard, Balboa Avenue, and Mount Etna Drive, which are described below.

Interstate 805 (I-805) is a north-south freeway that is located approximately one and a half miles east of the project site. Access from I-805 to the study area is provided by the Balboa Avenue interchange.

Genesee Avenue is a 4-lane roadway that widens to 6 lanes between Derrick Drive and Mount Etna Drive, transitions to 5 lanes (3 northbound, 2 southbound) between Mount Etna Drive to Mount Alifan, and narrows again back to 4 lanes after Mount Alifan. Genesee Avenue has a raised median throughout the study area with exception to the roadway segment between Clairemont Mesa Boulevard and Bannock Avenue. The posted speed limit along Genesee Avenue is 35 mph with exception of the roadway segment between Sauk Avenue and Derrick Drive which is 40 mph. Sidewalks are present on both sides of the roadway within the Project study area. On-street parallel parking is allowed along Genesee Avenue on segments south of Mount Alifan Drive and north of Sauk Avenue within the study area. Also, within the study area, Genesee Avenue has class II bike lanes throughout with exception of the class III bike route between Sauk Avenue and Appleton Street. The CMCP classifies this roadway as a 4-Lane Major Arterial. San Diego Metropolitan Transit System (MTS) Bus Route #41 operates along Genesee Avenue.

Mount Everest Boulevard is a 2-lane undivided roadway with sidewalks and on-street parallel parking present on both sides of the roadway. There are no bicycle facilities along Mount Everest within the Project study area. Mount Everest Boulevard has a posted speed limit of 25 mph within the Project study area. The

CMCP classifies Mount Everest Boulevard, south of Balboa Avenue as a 2-lane Collector. There are not transit routes that run along Mount Everest Boulevard; however, transit stops exist for bus route #27 at the Balboa Avenue and Mount Everest Boulevard intersection.

Balboa Avenue is currently constructed as a four to six-lane roadway within the Clairemont Mesa community. San Diego MTS Bus Route #27 operates along Balboa Avenue. Within the project study area, Balboa Avenue has a posted speed limit of 45 mph with the following geometric features:

- 4-lane roadway with a raised median between Clairemont Drive and Genesee Avenue. Sidewalks are located intermittently on the northern side of the roadway. Class II bike lanes are present on both side of the roadway. On-street parking is prohibited along this segment. The CMCP classifies this segment as a 4-Lane Major Arterial.
- 6-lane roadway with a raised median between Genesee Avenue and east of I-805. Sidewalk and Class II bike lanes are present on both side of the roadway. On-street parking is prohibited along this segment. The CMCP classifies this segment as a 6-Lane Major Arterial.

Mount Etna Drive is a 2-lane undivided roadway with sidewalks on both sides without bicycle facilities. On-street parallel parking is allowed throughout the segment with exception of the commercial fronting property extending 430 feet west of Genesee Avenue and across a portion of the project frontage. The posted speed limit is 25 mph, between Genesee Avenue and 500 feet west of Genesee Avenue where the posted speed limit of 15 mph per hour begins paired with roadway speed bumps. There are no transit routes that run along Mount Etna Drive; however, transit stops exist for bus route #41 at the Genesee Avenue & Mount Etna Drive intersection.

Roadway Segments

The following 20 roadway segments comprise the project study area for transportation:

1. Genesee Avenue between Appleton Street & Clairemont Mesa Boulevard;
2. Genesee Avenue between Clairemont Mesa Boulevard & Bannock Avenue;
3. Genesee Avenue between Bannock Avenue & Chateau Drive;
4. Genesee Avenue between Chateau Drive & Mount Herbert Avenue;
5. Genesee Avenue between Mount Herbert Avenue & Derrick Drive;
6. Genesee Avenue between Derrick Drive & Mount Etna Drive;

7. Genesee Avenue between Mount Etna Drive & Balboa Avenue;
8. Genesee Avenue between Balboa Avenue & Mount Alifan Drive;
9. Genesee Avenue between Mount Alifan Drive & Genesee Court;
10. Mount Everest Boulevard between Mount Etna Drive & Balboa Avenue;
11. Mount Etna Drive between Mount Everest Boulevard & Genesee Avenue;
12. Balboa Avenue between Clairemont Drive & Mount Everest Boulevard;
13. Balboa Avenue between Mount Everest Boulevard & Genesee Avenue;
14. Balboa Avenue between Genesee Avenue & Shopping Center Driveway;
15. Balboa Avenue between Shopping Center Driveway & Mount Abernathy Avenue;
16. Balboa Avenue between Mount Abernathy Avenue & Cannington Drive;
17. Balboa Avenue between Cannington Drive & Charger Boulevard;
18. Balboa Avenue between Charger Boulevard & I-805 Southbound Ramps;
19. Balboa Avenue between I-805 Southbound & I-805 Northbound Ramps; and
20. Balboa Avenue between I-805 Northbound Ramps and Ruffner Street.

Intersections

The following 20 intersections are located within the project study area for transportation (note that intersection locations 19 and 20 do not exist today but are future intersections associated with the proposed project):

1. Genesee Avenue & Clairemont Mesa Boulevard (Signal);
2. Genesee Avenue & Bannock Avenue (Signal);
3. Genesee Avenue & Chateau Drive (Signal);
4. Genesee Avenue & Mount Herbert Avenue (Signal);
5. Genesee Avenue & Derrick Drive (Signal);
6. Mount Everest Boulevard & Mount Etna Drive (All-Way Stop Controlled);
7. Genesee Avenue & Mount Etna Drive (Signal);
8. Clairemont Drive & Balboa Avenue (Signal);
9. Mount Everest Boulevard & Balboa Avenue (Signal);
10. Genesee Avenue & Balboa Avenue (Signal);
11. Shopping Center Driveway & Balboa Avenue (Signal);
12. Mount Abernathy Avenue & Balboa Avenue (Signal);
13. Cannington Drive & Balboa Avenue (Signal);

14. Charger Boulevard & Balboa Avenue (Signal);
15. I-805 Southbound Ramps & Balboa Avenue (Signal);
16. I-805 Northbound Ramps & Balboa Avenue (Signal);
17. Genesee Avenue & Mount Alifan Drive (Signal);
18. Mount Etna Drive & Project Driveway (Side-Street Stop Controlled)¹;
19. Genesee Avenue & Project Driveway (Side-Street Stop Controlled)¹; and
20. Balboa Avenue & Project Driveway (Side-Street Stop Controlled)¹.

2.4.1.3 Existing Traffic Conditions

Intersections

Table 2.4-1 displays intersection level of service and average vehicle delay results for the key study area intersections under Existing Conditions. Level of service calculation worksheets for Existing Conditions are provided in Appendix I. As shown in the table, all of the study area intersections are currently operating at acceptable LOS D or better during both the AM and PM peak hours, with the exception of the following four intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour, primarily due to the heavy volume in the southbound through direction;
8. Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour, primarily due to the southbound left movement which experiences a particularly high delay compared to all other movements at the intersection;
9. Mount Everest Boulevard & Balboa Avenue – LOS E during the AM and PM peak hours, primarily due to the high delay from the northbound and southbound directions, each serviced by a single lane in the respective directions; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour primarily due to the heavy volumes on all approaches of the intersection.

¹ Driveway does not currently exist; would be developed as part of Access Option 1, 2, or 3.

**Table 2.4-1
Peak Hour Intersection Level of Service – Existing Conditions**

Intersection	Control	AM Peak Hour		PM Peak Hour	
		Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1. Genesee Avenue & Clairemont Mesa Boulevard	Signal	42.6	D	59.9	E
2. Genesee Avenue & Bannock Avenue	Signal	19.7	B	10.5	B
3. Genesee Avenue & Chateau Drive	Signal	11.0	B	4.7	A

Roadway Segments

Table 2.4-2 displays the LOS analysis results for key study area roadway segments under Existing Conditions. As shown in the table, all of the key study area roadway segments are currently operating at acceptable LOS D or better, with the exception of the following five roadway segments:

12. Balboa Avenue, between Clairemont Drive and Mount Everest Boulevard (LOS E);

**Table 2.4-2
Roadway Segment Level of Service – Existing Conditions**

Roadway	Segment	Functional Classification	Cross-Section	ADT	Capacity (LOS E)	V/C	LOS
Genesee Avenue	Between Appleton Street & Clairemont Mesa Boulevard	4-Lane Major Arterial	Raised Median	23,097	40,000	0.577	C
	Between Clairemont Mesa Boulevard & Bannock Avenue	4-Lane Major Arterial	Undivided	24,483	40,000	0.612	C
	Between Bannock Avenue & Chateau Drive	4-Lane Major Arterial	Raised Median	25,244	40,000	0.631	C
	Between Chateau Drive & Mt Herbert Avenue	4-Lane Major Arterial	Raised Median	24,958	40,000	0.624	C
	Between Mt Herbert Avenue & Derrick Drive	4-Lane Major Arterial	Raised Median	23,242	40,000	0.581	C
	Between Derrick Drive & Mt Etna Drive	6-Lane Major Arterial	Raised Median	25,645	50,000	0.513	B
	Between Mt Etna Drive & Balboa Avenue	5-Lane Major Arterial	Raised Median	27,743	45,000	0.617	C
	Between Balboa Avenue & Mt Alifan Drive	5-Lane Major Arterial	Raised Median	23,259	45,000	0.517	B
	Between Mt Alifan Drive & Genesee Court	4-Lane Major Arterial	Raised Median	23,742	40,000	0.594	C
Mt Everest Boulevard	Between Mt Etna Drive & Balboa Avenue	2-Lane Collector w/o CLTL	Undivided	4,206	8,000	0.526	C
Mt Etna Drive	Between Mt Everest Boulevard & Genesee Avenue	2-Lane Collector w/o CLTL	Undivided	4,090	8,000	0.511	C
Balboa Avenue	Between Clairemont Drive & Mt Everest Boulevard	4-Lane Major Arterial	Raised Median	35,014	40,000	0.875	E
	Between Mt Everest Boulevard & Genesee Avenue	4-Lane Major Arterial	Raised Median	32,421	40,000	0.811	D

Roadway	Segment	Functional Classification	Cross-Section	ADT	Capacity (LOS E)	V/C	LOS
	Between Genesee Avenue & Shopping Center Driveway	6-Lane Major Arterial	Raised Median	32,231	50,000	0.645	C
	Between Shopping Center Driveway & Mt Abernathy Avenue	6-Lane Major Arterial	Raised Median	35,984	50,000	0.720	C
	Between Mt Abernathy Avenue & Cannington Drive	6-Lane Major Arterial	Raised Median	47,147	50,000	0.943	E
	Between Cannington Drive & Charger Boulevard	6-Lane Major Arterial	Raised Median	49,421	50,000	0.988	E
	Between Charger Boulevard & I-805 Southbound Ramps	6-Lane Major Arterial	Raised Median	61,846	50,000	1.237	F
	Between I-805 Southbound Ramps & I-805 Northbound Ramps*	8-Lane Prime Arterial	Raised Median	49,153	80,000	0.614	B
	Between I-805 Northbound Ramps & Ruffner Street	6-Lane Major Arterial	Raised Median	51,228	50,000	1.025	F

NOTES:

Bold letter indicates unacceptable LOS E or F.

ADT = average daily traffic; V/C = volume-to-capacity ratio; LOS = level of service; Ln = lane; CLTL = continuous left-turn lane

* The Balboa Ave segment between the southbound and northbound I-805 ramps is classified as a 6-lane major according to the CMCP; however, the actual roadway cross-section includes eight lanes (two of which are auxiliary ramp lanes).

SOURCE: Chen Ryan 2019 (Appendix I-1)

16. Balboa Avenue, between Mount Abernathy Avenue and Cannington Drive (LOS E);
17. Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS E); and
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F).

Ramp Meters

A ramp metering analysis was conducted to calculate delays and queues at the study area freeway on-ramps. Within the project study area, the I-805 northbound on-ramp at Balboa Avenue (study intersection no. 16) and the I-805 southbound on-ramp at Balboa Avenue (study intersection no. 15) have activated ramp meters. **Table 2.4-3** summarizes the freeway ramp metering analysis results under Existing Conditions. As shown in the table, the anticipated peak hour demand does not exceed the average meter rate at either of the study ramp meter locations.

**Table 2.4-3
Ramp Metering Analysis – Existing Conditions**

On-Ramp	# of Lanes		Peak Hour	Demand ^a (veh/hr) per lane	Meter Rate ^b (veh/hr) per lane	Excess Demand ^c (veh/hr) per lane	Delay ^d (min)	Queue ^e (ft)	Storage Length (ft)	Excess Queue (ft)
	SOV	HOV								
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	384	423	0	0	0	1,000	0
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	314	511	0	0	0	410	0

NOTES:

SOV = single-occupancy vehicle; HOV = high-occupancy vehicle

a Demand is the peak hour demand expected to use the on-ramp.

b Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

c Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

d Delay = (Excess Demand / Meter Rate) X 60 min/hr.

e Queue = (Excess Demand) X 29 ft/veh.

SOURCE: Chen Ryan 2019 (Appendix I-1)

2.4.1.4 Existing Pedestrian Conditions

Sidewalks are provided on both sides of Mount Etna Drive along the project frontage. The sidewalk along Mount Etna Drive on the north side fronts a commercial plaza across from the project site. Heading west, the sidewalk then

continues to the nearby residential neighborhoods. Crosswalks are present on all four legs of the Genesee Avenue and Mount Etna Drive intersection less than 150 feet northeast from the project site.

Mount Etna Drive provides east/west connectivity from the project site to nearby residential neighborhoods, as well as to nearby commercial shopping centers such as the Genesee Plaza Shopping Center and the Liberty Park Plaza shopping center. A pedestrian-friendly speed limit of 15 mph is posted at the entrance to the residential neighborhood accompanied by road speed bumps that end at the Mount Everest and Mount Etna Drive intersection.

All streets immediately surrounding the project site include sidewalks. All signalized intersections within the project study area include striped crosswalks, pedestrian signal heads, and American with Disabilities Act (ADA)-compliant ramps, where crossings are allowed, with the exception of the following:

Pedestrian crossing is not allowed at the following locations:

- The south leg of Genesee Avenue & Chateau Drive
- The west leg of Cannington Drive and Balboa Avenue
- The east leg of Charger Boulevard & Balboa Avenue

ADA-compliant ramps are not present at the following locations:

- The southwest corner of the Genesee Avenue & Derrick Drive intersection
- The southwest corner of the Genesee Avenue & Mount Alifan Drive intersection

The north leg of the I-805 southbound Ramps and Balboa Avenue intersection does not have ADA-compliant ramps at either crossing point. The south leg of this intersection as well as the two loop ramps currently lack pedestrian signal heads and ADA-compliant ramps.

The south leg of the I-805 northbound Ramps and Balboa Avenue intersection does not have ADA-compliant ramps at either crossing point. The north leg of this intersection as well as the two loop ramps currently lack pedestrian signal heads and ADA-compliant ramps.

2.4.1.5 Existing Bicycle Conditions

There are currently no bicycle facilities directly accessing the project site on Mount Etna Drive; however, Class II bike lanes are present on both sides of Genesee Avenue and Balboa Avenue. The southbound Class II bike lane on Genesee Avenue to the east of the project site is painted green for high visibility

as the lane approaches the Genesee Avenue and Balboa Avenue intersection and is located adjacent to a right-turn pocket.

2.4.1.6 Existing Transit Conditions

The project site is not directly served by transit. However, San Diego MTS Bus Route #27 and #41, described below, have multiple stops within a mile of the project site. The transit lines are illustrated in **Figure 2.4-2**.

MTS Bus Route #27 connects Pacific Beach to the west and the Kearny Mesa Transit Center to the east. The Balboa Avenue and Genesee Avenue bus stop is the closest bus stop to the project site within 400 feet. MTS Bus Route #27 runs every 30 minutes during peak periods and hourly during off-peak period on weekdays and hourly on Saturdays. MTS Bus Route #27 does not operate on Sundays. MTS Bus Route #27 runs from approximately from 5:30 AM to 10:00 PM on weekdays and 6:00 AM and 8:30 PM on Saturdays.

MTS Bus Route #41 connects the University of California San Diego (UCSD)/University Towne Centre (UTC) to the north and Fashion Valley to the south. The Genesee Avenue and Mount Etna Drive bus stop is the closest bus stop to the project site within 400 feet. MTS Bus Route #41 runs every 15 minutes during peak periods and every 30 minutes during off-peak period on weekdays. When UCSD is in session, MTS Bus Route #41 runs every 6 minutes between 6:47 AM and 9:32 AM towards UCSD/UTC and between 2:59 PM and 5:29 PM towards Fashion Valley. MTS Bus Route #41 also runs every 30 minutes during peak periods and hourly during off-peak periods on the weekends. MTS Bus Route #41 runs from approximately 5:20 AM and 11:40 PM on weekdays, 6:30 AM and 10:00 PM on Sundays, and 6:00 AM and 10:30 PM on Saturdays.

2.4.2 Regulatory Setting

2.4.2.1 State

California Department of Transportation

The California Department of Transportation (Caltrans) is the primary state agency responsible for transportation issues. One of its duties is the construction and maintenance of the state highway system. Caltrans has established standards for street traffic flow and has developed procedures to determine if intersections require improvements. For projects that may physically affect facilities under its administration, Caltrans requires encroachment permits before any construction work may be undertaken. For projects that would not physically affect facilities but may influence traffic flow and levels of services at such facilities, Caltrans may recommend measures to mitigate the traffic impacts of such projects.

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law. SB 743 started a process that could fundamentally change transportation impact analysis as part of California Environmental Quality Act (CEQA) compliance. These changes include the elimination of auto delay, LOS, and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts in many parts of California (if not statewide). SB 743 required the Governor's Office of Planning and Research (OPR) to propose revisions to the CEQA Guidelines establishing new criteria to "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." (Public Resources Code Section 21099(b)(1).)

The latest CEQA Guidelines Section 15064.3, subdivision (b) was adopted in December 2018 by the California Natural Resources Agency. These revisions to the CEQA Guidelines criteria for determining the significance of transportation impacts are primarily focused on projects within transit priority areas (TPAs), and shifts the focus from driver delay to reduction of greenhouse gas emissions, creation of multimodal networks, and promotion of a mix of land uses (which in turn reduces vehicle trips). Vehicle miles traveled (VMT) is a measure of the total number of miles driven to or from a development and is sometimes expressed as an average per trip or per person.

The adopted guidance provides that a lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide. The City is currently engaged in this process and has not yet formally adopted its updated transportation significance thresholds or its updated transportation impact analysis procedures. Since the regulations of SB 743 have not been finalized or adopted by the City, automobile delay remains the measure used to determine the significance of a traffic impact. However, a VMT analysis was conducted for the proposed project, and is summarized in the discussion of project impacts for informational purposes.

2.4.2.2 Regional

San Diego Forward: The Regional Plan

The San Diego Association of Governments (SANDAG) is the regional authority that creates regional specific documents to provide guidance to local agencies, as SANDAG does not have land use authority. SANDAG's San Diego Forward: The Regional Plan (Regional Plan) was adopted by the SANDAG Board of Directors on October 9, 2015 (SANDAG 2015). The Regional Plan combines two of the region's existing planning documents: the Regional Comprehensive Plan (RCP) for the San Diego Region and the Regional Transportation

Plan/Sustainable Communities Strategy (RTP/SCS). The RCP, adopted in 2004, laid out key principles for managing the region's growth while preserving natural resources and limiting urban sprawl. The plan covered eight policy areas, including urban form, transportation, housing, health environment, economic prosperity, public facilities, our borders, and social equity. These policy areas were addressed in the 2050 RTP/SCS and are now fully integrated into the Regional Plan. The project site is located within a planned (2035) TPA identified on the TPA map contained in the SANDAG's San Diego Forward: The Regional Plan (City of San Diego 2019).

2.4.2.3 Local

San Diego County General Plan

The San Diego County General Plan Mobility Element provides a framework for a balanced, multi-modal transportation system within the unincorporated areas of the County of San Diego. The Mobility Element includes a description of the County's transportation network and the goals and policies that address safety, efficiency, maintenance, and management of the transportation network.

City of San Diego General Plan

The Mobility Element of the City of San Diego General Plan defines the policies regarding traffic flow and transportation facility design. The purpose of the Mobility Element is "to improve mobility through development of a balanced, multi-modal transportation network." The main goals of the Mobility Element pertain to walkable communities, transit first, street and freeway system, intelligent transportation systems (ITS), Transportation Demand Management (TDM), bicycling, parking management, airports, passenger rail, goods movement/freight, and regional transportation coordination and financing

Clairemont Mesa Community Plan

The primary goal for transportation as stated in the CMCP is to "[P]rovide a safe and efficient transportation system that maximizes access to community activity centers and to destinations within the City, minimizing adverse environmental effects" (CMCP page 12).

2.4.3 Analysis of Project Effects and Determination as to Significance

The following thresholds have been established by the City to determine significance under CEQA related to traffic impacts:

1. If any intersection or roadway segment affected by a project would operate at LOS E or F under either direct or cumulative conditions, the impact would be significant if the project exceeds the thresholds shown in **Table 2.4-4**;

2. At any ramp meter location with delays above 15 minutes, the impact would be significant if the project exceeds the thresholds shown in Table 2.4-4;
3. If a project would add a substantial amount of traffic as shown in Table 2.4-4 to a congested freeway segment, interchange, or ramp, the impact may be significant;
4. If a project would increase traffic hazards to motor vehicles, bicyclists, or pedestrians due to proposed non-standard design features (e.g., poor sight distance, proposed driveway onto an access-restricted roadway), the impact would be significant;
5. If a project would result in the construction of a roadway which is inconsistent with the General Plan and/or a community plan, the impact would be significant if the proposed roadway would not properly align with other existing or planned roadways;
6. If a project would result in a substantial restriction in access to publicly or privately owned land, the impact would be significant;

**Table 2.4-4
City of San Diego Traffic Thresholds**

Level of Service with Project*	Allowable Change Due to Project Impact**					
	Freeways		Roadway Segments		Intersections	Ramp Metering
	V/C	Speed (mph)	V/C	Speed (mph)	Delay (sec.)	Delay (min.)
E (or ramp meter delays above 15 min.)	0.010	1.0	0.02	1.0	2.0	2.0
F (or ramp meter delays above 15 min.)	0.005	0.5	0.01	0.5	1.0	1.09

* All level of service (LOS) measurements are based upon HCM procedures for peak-hour conditions. However, vehicle to capacity (V/C) ratios for roadway segments may be estimated on an ADT/24-hour traffic volume basis (using Table 2.1 or a similar LOS chart for each jurisdiction). The acceptable LOS for freeways, roadways, and intersections is generally "D" ("C" for undeveloped or not densely developed locations per jurisdiction definitions). For metered freeway ramps, LOS does not apply. However, ramp meter delays above 15 minutes are considered excessive.

** If a Proposed Project's traffic causes the values shown in the table to be exceeded, the impacts are determined to be significant. These impact changes may be measured from appropriate computer programs or expanded manual spreadsheets. The project applicant shall then identify feasible mitigation (within the Traffic Impact Study report) that would maintain the traffic facility at an acceptable LOS. If the LOS with the Proposed Project becomes unacceptable (see above * note), or if the project adds a significant amount of peak-hour trips to cause any traffic queues to exceed on- or off-ramp storage capacities, the project applicant shall be responsible for mitigating significant impact changes.

In addition, the following criterion from Appendix G of the CEQA Guidelines was used for the evaluation of VMT impacts:

- Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3 subdivision (b)?

However, as stated above in the Section 2.4.2, Regulatory Setting, the City has not yet adopted VMT thresholds and, therefore, this the evaluation of VMT impacts is provided for informational purposes only.

2.4.3.1 Traffic Generation and Existing Capacity

Issue 1: Would the project result in traffic generation that would cause an intersection, roadway segment, freeway segment, interchange or ramp to operate at LOS E or F under either direct or cumulative conditions and exceed the significance thresholds detailed in Table 2.4-4?

The analysis of impacts under Issue 1 addresses Significance Determination Thresholds 1, 2, and 3 as detailed in Section 2.4.3, above. The analysis includes three traffic condition scenarios: Existing Plus Project; Year 2021 Plus Project; and Year 2050 Plus Project, and includes an evaluation of each of the three access options. It should be noted that freeway segments did not warrant evaluation because the proposed project would contribute less than 150 peak hour trips to nearby freeways. The analysis is for the proposed Community Plan Amendment (CPA) and rezone of the project site. The site demolition and preparation phase of the proposed project would not produce permanent traffic requiring analysis under the City Significance Determination Thresholds.

Information used in this section is from the Transportation Impact Study (TIS), the TIS Addendum, and the VMT Addendum, prepared by Chen Ryan for the proposed project (Chen Ryan 2019), which are included as Appendix I of this EIR. At the time the TIS was prepared, the future residential project consisted of 448 affordable housing units with site access provided via one driveway on Mount Etna Drive. The future project was subsequently limited to 404 affordable dwelling units and three site access options: (1) one driveway on Mount Etna Drive; (2) two driveways: one on Mount Etna Drive and one on Genesee Avenue; and (3) three driveways: one on Mount Etna Drive, one on Genesee Avenue, and one on Balboa Avenue). For these reasons, the TIS Addendum was prepared. As such, the transportation and traffic analysis and impact evaluation summarized below is based on the results described in the TIS Addendum and not the TIS.

Impact Analysis

Trip Generation, Distribution, and Assignment

The proposed project trip generation estimates were derived utilizing the trip generation rates outlined in Table 1 of the *City of San Diego Land Development Code – Trip Generation Manual 2003*. Additionally, trip reductions from the City's Traffic Impact Study Manual were applied to the trip generation estimates to account for its location in a TPA with high-frequency transit service on Genesee Avenue and high frequency transit service planned along Balboa Avenue by 2035.

Consequently, the following trip reductions were applied to the project's trip generation estimates to take credit for future residents using transit in lieu of driving:

- Daily trips = 5 percent
- AM Peak Hour trips = 9 percent
- PM Peak Hour trips = 6 percent

Taking into account these trip reductions, the proposed project is anticipated to generate a total of 2,018 daily trips, including 138 AM peak hour trips and 169 PM peak hour trips. The trip distribution for the proposed project was developed based on a SANDAG Series 13 Transportation Forecast Select Zone Assignment. This model was developed and is being used for the on-going CMCP Update. Additionally, the project's traffic analysis zone (TAZ) land use was updated to include the proposed land use.

Based on the assumed project trip distribution and the three access options, daily, AM peak hour, and PM peak hour estimates were added onto the project driveway(s), as well as the roadways and intersections immediately adjacent to the project driveway(s).

Existing plus Project

The Existing plus Project traffic scenario represents an analysis of existing traffic conditions with the addition of trips generated by the proposed project. Under this scenario, the proposed project's traffic volumes were added to the existing traffic volumes.

Table 2.4-5 displays intersection level of service and average vehicle delay results for the key study area intersections under Existing plus Project conditions with all three access options. **Table 2.4-6** displays the level of service and volume-to-capacity (v/c) analysis results for key study area roadway segments under Existing plus Project conditions. **Table 2.4-7** summarizes the ramp metering analysis for Existing plus Project conditions at the two study intersections (no. 15 and no. 16) with activated ramp meters. Level of service calculation worksheets and ramp meter analysis details for Existing plus Project conditions are provided in Appendix I.

**Table 2.4-5
Peak Hour Intersection Level of Service – Existing plus Project**

**Table 2.4-7
Ramp Metering Analysis – Existing plus Project**

On-Ramp	# of Lanes		Peak Hour	Demand ^a (veh/hr) per lane	Meter Rate ^b (veh/hr) per lane	Excess Demand ^c (veh/hr) per lane	Delay ^d (min)	Queue ^e (ft)	Storage Length (ft)	Excess Queue (ft)	Delay w/o Project (min)	Δ Delay (min)	S?
	SOV	HOV											
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	395	423	0	0	0	1,000	0	0	0.0	No
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	316	511	0	0	0	410	0	0	0.0	No

NOTES:

SOV = single-occupancy vehicle; HOV = high-occupancy vehicle

Based upon field observation it is estimated that 20% of the vehicles at these ramp meters use the HOV lane when available. Since the majority of trips existing the school during the PM Peak hour would be parents picking up students, it is assumed that 90% of the Proposed Project trips during the PM peak hours would use the HOV lane.

^a Demand is the peak hour demand expected to use the on-ramp.

^b Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

^c Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

^d Delay = (Excess Demand / Meter Rate) X 60 min/hr.

^e Queue = (Excess Demand) X 29 ft/veh.

SOURCE: Chen Ryan 2019 (Appendix I-1)

Intersections – Access Option 1

As shown in Table 2.4-5, all of the study area intersections would operate at acceptable LOS D or better during both the AM and PM peak hours with Access Option 1 (one driveway on Mount Etna Drive), with the exception of the following four intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour;
8. Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour;
9. Mount Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour; and
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak.

Based on the City's Significance Determination Thresholds, outlined above in Table 2.4-4, the traffic generated by Access Option 1 would result in a significant impact at the following study intersection:

9. Mount Everest Boulevard & Balboa Avenue

Intersections – Access Option 2

For Access Option 2 (two driveways: one full-access stop-controlled driveway on Mount Etna Drive and one right-turn-in, right-turn-out only stop-controlled driveway on Genesee Avenue), the same four intersections identified above for Access Option 1 would operate at an unacceptable LOS (i.e., LOS E or LOS F) during one or more of the peak hours. However, access Option 2 would not result in any significant intersection impacts.

Intersections – Access Option 3

For Access Option 3 (three driveways, one full-access stop-controlled driveway on Mount Etna Drive, one right-turn-in, right-turn-out only stop-controlled driveway on Genesee Avenue, and one right-turn-in, right-turn-out only stop-controlled driveway on Balboa Avenue), the same four intersections identified above for Access Option 1 would operate at an unacceptable LOS (i.e., LOS E or LOS F) during one or more of the peak hours. Access Option 3 would result in two significant intersection impacts:

9. Mount Everest Boulevard & Balboa Avenue
10. Genesee Avenue & Balboa Avenue

Roadway Segments

The roadway segment analysis results are the same for all three access options. As shown in Table 2.4-6, all of the key study area roadway segments would

operate at acceptable LOS D or better with all access options, with the exception of the following five roadway segments along Balboa Avenue:

12. Balboa Avenue, between Clairemont Drive and Mount Everest Boulevard (LOS E);
16. Balboa Avenue, between Mount Abernathy Avenue and Cannington Drive (LOS E);
17. Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS F);
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
20. Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Of the five roadway segments projected to operate at substandard LOS E or F under Existing plus Project conditions, the two discussed below could potentially result in a significant impact based on the Significance Determination Thresholds outlined in Table 2.4-4. Daily roadway LOS is typically used only at the planning level and does not necessarily indicate true roadway operations. Therefore, to determine if the identified roadway segments operate at acceptable levels during peak times (worst case), peak hour HCM arterial analyses and peak hour intersection analyses were conducted to better understand the actual travel flow along the roadways. According to this methodology, if peak hour arterial LOS and the LOS at the intersections at either end of the roadway segment would operate at LOS D or better, and the roadway segment is built to its ultimate classification, then the impact would be considered to be less than significant, since the actual travel flow along the segment is consider to be acceptable.

17. Balboa Avenue, between Cannington Drive and Charger Boulevard.

The proposed project would add 646 daily trips, resulting in an increase of 0.013 in V/C ratio. The arterial level of service analysis identifies this roadway segment to operate at LOS E and LOS D in the eastbound and westbound directions, respectively, during the AM peak hour, and LOS F and LOS D in the eastbound and westbound directions, respectively, during the PM peak hour. The intersections of Mount Albertine Avenue/Cannington Drive/Balboa Avenue and Eckstrom Avenue/Charger Boulevard/Balboa Avenue are projected to operate at LOS D or better during both AM and PM peak hours. Therefore, the proposed project would result in a significant impact to this roadway segment.

18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

The proposed project would add 646 daily trips, resulting in an increase of 0.013 in V/C ratio. The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the eastbound and

westbound directions, respectively, during the AM peak hour, and LOS B and LOS D in the eastbound and westbound directions, respectively, during the PM peak hour. The intersections of Eckstrom Avenue/Charger Boulevard/Balboa Avenue and I-805 Southbound Ramps/Balboa Avenue are projected to operate at LOS D or better during both AM and PM peak hours. Therefore, the proposed project would not result in a significant impact to this roadway segment.

Ramp Meters

The ramp meter analysis results are the same for all three access options. As shown in the Table 2.4-7, the anticipated peak hour demand under this traffic scenario would not exceed the average meter rate at either of the study ramp meter locations. Based upon the significance criteria presented in Table 2.4-4, the addition of project traffic would not cause a significant impact to either of the study ramp meter locations.

Near-Term plus Project (Year 2021)

The Near-Term plus Project traffic scenario represents an analysis of traffic conditions in Year 2021 (i.e., open year for the proposed project) with the addition of trips generated by the proposed project. Under this scenario, the proposed project's traffic volumes were added to baseline traffic volumes, which includes traffic generated by other nearby developments expected to be completed by Year 2021. Based on review of the City's "Open DSD" website and consultation with City staff, six projects were identified for inclusion in the Near-Term plus Project traffic impact analysis due to their potential to add traffic to the project study area. Those cumulative projects would include two new or relocated charter schools, a residential care facility, a 106-room hotel, approximately 670 residential units and approximately 20,000 square feet (SF) of retail space. The cumulative projects that have potential to affect the project study area are listed in Table 1-3 of this EIR and were estimated to generate approximately 8,103 daily trips, 1,431 AM peak hour trips, and 870 PM peak hour trips. It should be noted that those projects listed in the table that would have no potential for cumulative traffic impacts are not included in this analysis. Additional detail on the cumulative projects assumed for this traffic scenario is provided in Appendix I.

Table 2.4-8 displays intersection LOS and average vehicle delay results for the key study area intersections under Near-Term plus Project conditions.

Table 2.4-9 displays the LOS analysis results for key study area roadway segments under Near-Term plus Project conditions. **Table 2.4-10** summarizes the ramp metering analysis for Near-Term plus Project conditions at the two study intersections (no. 15 and no. 16) with activated ramp meters. Level of service calculation worksheets and ramp meter analysis details for Near-Term plus Project conditions are provided in Appendix I.

**Table 2.4-10
Ramp Metering Analysis – Near-Term plus Project**

On-Ramp	# of Lanes			Demand ^a (veh/hr) per lane	Meter Rate ^b (veh/hr) per lane	Excess Demand ^c (veh/hr) per lane	Delay ^d (min)	Queue ^e (ft)	Storage Length (ft)	Excess Queue (ft)	Delay w/o Project (min)	Δ Delay (min)	S?
	SOV	HOV	Peak Hour										
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	395	423	0	0	0	1,000	0	0	0.0	No
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	316	511	0	0	0	410	0	0	0.0	No

NOTES:

SOV = single-occupancy vehicle; HOV = high-occupancy vehicle

Based upon field observation, it is estimated that 20% of the vehicles at these ramp meters use the HOV lane when available.

^a Demand is the peak hour demand expected to use the on-ramp.

^b Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

^c Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

^d Delay = (Excess Demand / Meter Rate) X 60 min/hr.

^e Queue = (Excess Demand) X 29 ft/veh.

SOURCE: Chen Ryan 2019 (Appendix I-1)

Intersections – Access Options 1 and 2

The intersection LOS analysis results are the same for Access Options 1 and 2. As shown in Table 2.4-8, all of the study area intersections would operate at acceptable LOS D or better during both the AM and PM peak hours with Access Options 1 and 2, with the exception of the following six intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the PM peak hour;
8. Clairemont Drive & Balboa Avenue – LOS E during the PM peak hour;
9. Mount Everest Boulevard & Balboa Avenue – LOS F during the AM peak hour and LOS E during the PM peak hour;
10. Genesee Avenue & Balboa Avenue – LOS E during the PM peak hour;
14. Charger Boulevard & Balboa Avenue – LOS E during the AM peak hour; and
17. Genesee Avenue & Mount Alifan Drive – LOS E during both the AM and PM peak hours.

Based on the City's Significance Determination Thresholds, outlined above in Table 2.4-4, the traffic generated by Access Options 1 and 2 would result in a significant impact at the following two study intersections:

9. Mount Everest Boulevard & Balboa Avenue; and
14. Charger Boulevard & Balboa Avenue.

Intersections – Access Option 3

For Access Option 3, the same six intersections identified above for Access Option 1 would operate at an unacceptable LOS (i.e., LOS E or LOS F) during one or more of the peak hours. Access Option 3 would result in a significant intersection impact at the following three study intersections:

9. Mount Everest Boulevard & Balboa Avenue;
10. Genesee Avenue & Balboa Avenue; and
14. Charger Boulevard & Balboa Avenue.

Roadway Segments:

The roadway segment analysis results under Near-Term plus Project conditions are the same for all three access options. As shown in **Table 2.4-9**, all of the key

study area roadway segments would operate at acceptable LOS D or better, with the exception of the following five roadway segments:

12. Balboa Avenue, between Clairemont Drive and Mount Everest Boulevard (LOS E);
16. Balboa Avenue, between Mount Abernathy Avenue and Cannington Drive (LOS E);
17. Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS F);
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
20. Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Of the five roadway segments projected to operate at substandard LOS E or F under Near-Term plus Project conditions, the two discussed below could potentially result in a significant impact based on the Significance Determination Thresholds outlined in Table 2.4-4. Daily roadway LOS is typically used only at the planning level and does not necessarily indicate true roadway operations. Therefore, to determine if the identified roadway segments operate at acceptable levels during peak times (worst case), peak hour aerial analyses and peak hour intersection analyses were conducted to better understand the actual travel flow along the roadways. If peak hour arterial LOS and the LOS at the intersections at either end of the roadway segment would operate at LOS D or better, and the roadway segment is built to its ultimate classification, then the impact would be considered to be less than significant, since the actual travel flow along the segment is considered to be acceptable.

17. Balboa Avenue, between Cannington Drive and Charger Boulevard.

The proposed project would add 646 daily trips, resulting in an increase of 0.013 in V/C ratio. The arterial level of service analysis identifies this roadway segment to operate at LOS E and LOS D in the eastbound and westbound directions, respectively, during the AM peak hour, and LOS F and LOS D in the eastbound and westbound directions, respectively, during the PM peak hour. The intersections of Mount Albertine Avenue/Cannington Drive/Balboa Avenue and Eckstrom Avenue/Charger Boulevard/Balboa Avenue are projected to operate at LOS D or better during both AM and PM peak hours. Therefore, the proposed project would result in a significant impact to this roadway segment.

18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

The proposed project would add 962 daily trips, resulting in an increase of 0.013 in V/C ratio. The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the eastbound and westbound directions, respectively, during the AM peak hour, and LOS B and LOS D in the eastbound and westbound directions, respectively, during the PM peak hour. The intersection of Eckstrom Avenue/Charger Boulevard/Balboa Avenue is projected to operate at LOS E in the AM peak hour and LOS D in the PM peak hour, and the intersection of I-805 Southbound Ramps/Balboa Avenue is projected to operate at LOS B or better during both AM and PM peak hours. Therefore, the proposed project would result in a significant impact to this roadway segment.

Ramp Meters

The ramp meter analysis results are the same for all three access options. As shown in Table 2.4-10, the anticipated peak hour demand under this traffic scenario would not exceed the average meter rate at either of the study ramp meter locations. Based upon the Significance Determination Thresholds presented in Table 2.4-4, the addition of project traffic would not cause a significant impact to either of the study ramp meter locations.

Cumulative plus Project (Year 2050)

The Cumulative plus Project traffic scenario represents an analysis of traffic conditions at community buildout in Year 2050 with the addition of trips generated by the proposed project. Under this scenario, the proposed project's traffic volumes were added to baseline traffic volumes. Similar to the Select Zone analysis that was used for the project's trip distribution, the forecast model for the CMCP Update was used to develop the Year 2050 volumes. The peak hour intersection turning movements were developed by comparing existing and forecasted Year 2050 ADTs, as well as peak hour approach and departure volumes, then applying the respective growth factors. Manual adjustments were also made to ensure that traffic volumes among adjacent intersections are reasonably balanced.

Table 2.4-11 displays intersection LOS and average vehicle delay results for the key study area intersections under Cumulative plus Project conditions.

Table 2.4-12 displays the LOS analysis results for key study area roadway segments under Cumulative plus Project conditions. **Table 2.4-13** summarizes the ramp metering analysis for Cumulative plus Project conditions at the two study intersections (no. 15 and no. 16) with activated ramp meters. Level of service calculation worksheets and ramp meter analysis details for Cumulative plus Project conditions are provided in Appendix I.

**Table 2.4-13
Ramp Metering Analysis – Cumulative plus Project**

On-Ramp	# of Lanes			Demand ^a (veh/hr) per lane	Meter Rate ^b (veh/hr) per lane	Excess Demand ^c (veh/hr) per lane	Delay ^d (min)	Queue ^e (ft)	Storage Length (ft)	Excess Queue (ft)	Delay w/o Project (min)	Δ Delay (min)	S?
	SOV	HOV	Peak Hour										
I-805 SB On-Ramp @ Balboa Ave EB	1	1	PM	435	423	12	1.7	348	1,000	0	0.1	0.16	No
I-805 NB Ramp @ Balboa Ave EB	1	1	AM	386	511	0	0	0	410	0	0	0.0	No

NOTES:

SOV = single-occupancy vehicle; HOV = high-occupancy vehicle

Based upon field observation, it is estimated that 20% of the vehicles at these ramp meters use the HOV lane when available.

^a Demand is the peak hour demand expected to use the on-ramp.

^b Meter Rate is the peak hour capacity expected to be processed through the ramp meter. This value was obtained from Caltrans.

^c Excess Demand = (Demand) – (Meter Rate) or zero, whichever is greater.

^d Delay = (Excess Demand / Meter Rate) X 60 min/hr.

^e Queue = (Excess Demand) X 29 ft/veh.

SOURCE: Chen Ryan 2019 (Appendix I-1)

Intersections

The LOS results are the same for all three access options. As shown in Table 2.4-11, all of the study area intersections would operate at acceptable LOS D or better during both the AM and PM peak hours with all three access options, with the exception of the following six intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard – LOS E during the AM peak hour and LOS F during the PM peak hour;
8. Clairemont Drive & Balboa Avenue – LOS E during the AM peak hour and LOS F during the PM peak hour;
9. Mount Everest Boulevard & Balboa Avenue – LOS F during both the AM and PM peak hours;
10. Genesee Avenue & Balboa Avenue – LOS F during the PM peak hour;
14. Charger Boulevard & Balboa Avenue – LOS E during the AM peak hour; and
17. Genesee Avenue & Mount Alifan Drive – LOS E during the PM peak hour.

Based on the City's Significance Determination Thresholds, outlined above in Table 2.4-4, the traffic generated by the proposed project would result in a significant impact at the following five study intersections for all three access options:

1. Genesee Avenue & Clairemont Mesa Boulevard;
8. Clairemont Drive & Balboa Avenue;
9. Mount Everest Boulevard & Balboa Avenue;
10. Genesee Avenue & Balboa Avenue; and
14. Charger Boulevard & Balboa Avenue.

Roadway Segments – Access Option 1

As shown in the Table 2.4-12, all of the key study area roadway segments would operate at acceptable LOS D or better with Access Option 1, with the exception of the following six roadway segments:

11. Mount Etna Drive, between Mount Everest Boulevard and Genesee Avenue (LOS E);
13. Balboa Avenue, between Mount Everest Boulevard and Genesee Avenue (LOS E);
16. Balboa Avenue, between Mount Abernathy Avenue and Cannington Drive (LOS E);

17. Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS E);
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
20. Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Of the six roadway segments projected to operate at substandard LOS E or F under Cumulative plus Project conditions, the Access Option 1 could cause potentially significant impacts at the two roadway segments discussed below based on the Significance Determination Thresholds outlined in Table 2.4-4. Daily roadway LOS is typically used only at the planning level and does not necessarily indicate true roadway operations. Therefore, to determine if the identified roadway segments operate at acceptable levels during peak times (worst case), peak hour aerial analyses and peak hour intersection analyses were conducted to better understand the actual travel flow along the roadways. If peak hour arterial LOS and the LOS at the intersections at either end of the roadway segment would operate at LOS D or better, and the roadway segment is built to its ultimate classification, then the impact would be considered to be less than significant, since the actual travel flow along the segment is considered to be acceptable.

11. Mount Etna Drive, between Mount Everest Boulevard and Genesee Avenue.

The proposed project would add 2,018 daily trips, resulting in an increase of 0.252 in V/C ratio. The arterial LOS analysis identifies this roadway segment to operate at LOS E in the eastbound and westbound directions during both the AM and PM peak hours. The intersections of Mount Everest Boulevard/Mount Etna Drive and Genesee Avenue/Mount Etna Drive are projected to operate at LOS C or better during both AM and PM peak hours. Therefore, Access Option 1 would result in a significant impact to this roadway segment.

18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

The proposed project would add 646 daily trips, resulting in an increase of 0.013 in V/C ratio. The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the eastbound and westbound directions, respectively, during the AM peak hour, and LOS B and LOS D in the eastbound and westbound directions, respectively, during the PM peak hour. The intersection of Eckstrom Avenue/Charger Boulevard/Balboa Avenue is projected to operate at LOS E in the AM peak hour and LOS D in the PM peak hour, and the intersection of I-805 Southbound Ramps/Balboa Avenue is projected to operate at LOS B or

better during both AM and PM peak hours. Therefore, Access Option 1 would result in a significant impact to this roadway segment.

Roadway Segments – Access Options 2 and 3

The roadway segment analysis results are the same for Access Options 2 and 3. As shown in the Table 2.4-12, all of the key study area roadway segments would operate at acceptable LOS D or better with Access Options 2 and 3, with the exception of the following five roadway segments:

13. Balboa Avenue, between Mount Everest Boulevard and Genesee Avenue (LOS E);
16. Balboa Avenue, between Mount Abernathy Avenue and Cannington Drive (LOS E);
17. Balboa Avenue, between Cannington Drive and Charger Boulevard (LOS E);
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (LOS F); and
20. Balboa Avenue, between I-805 Northbound Ramps and Ruffner Street (LOS F).

Of the five roadway segments projected to operate at substandard LOS E or F under Cumulative plus Project conditions, the one discussed below could potentially result in a significant impact based on the significance criteria outlined in Table 2.4-4.

18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps.

The proposed project would add 646 daily trips, resulting in an increase of 0.013 in V/C ratio. The arterial level of service analysis identifies this roadway segment to operate at LOS B and LOS C in the eastbound and westbound directions, respectively, during the AM peak hour, and LOS B and LOS D in the eastbound and westbound directions, respectively, during the PM peak hour. The intersection of Eckstrom Avenue/Charger Boulevard/Balboa Avenue is projected to operate at LOS E in the AM peak hour and LOS D in the PM peak hour, and the intersection of I-805 Southbound Ramps/Balboa Avenue is projected to operate at LOS B or better during both AM and PM peak hours. Therefore, Access Options 2 and 3 would result in a significant impact to this roadway segment.

Ramp Meters

The ramp meter analysis results are the same for all three access options. As shown in Table 2.4-13, the anticipated peak hour demand is anticipated to

exceed the anticipated meter rate at the I-805 Southbound Ramp @ Balboa Avenue (eastbound) during the PM peak hour by 12 vehicles and result in a queue length of 348 feet. Based upon the significance criteria presented in Table 2.4-4, the addition of project traffic would not cause a significant impact to either of the study ramp meter locations.

2.4.3.2 Traffic Hazards

Issue 2: Would the project increase traffic hazards for motor vehicles, bicyclists, or pedestrians due to a proposed non-standard design features (e.g., poor sight distance or driveway onto an access-restricted roadway)?

This analysis of impacts under issue question 2 addresses Significance Determination Threshold 4 as detailed in Section 2.4.3, above.

Impact Analysis

The three access options considered in this analysis are described in detail in Chapter 1.0, Project Description. In all three access options, Mount Etna Drive would serve as the main entrance providing full access (i.e., all vehicular movements permitted) to the project site. Access at Genesee Avenue and/or Balboa Avenue would be restricted to right-in, right-out vehicular movements; in other words, no left turns into or out of the project site would be permitted. The driveway would be a side street stop-controlled intersection. All three driveways would operate at LOS C or better for all project study scenarios. All three roadways that would potentially provide access to and from the project site directly from adjacent roads and would be designed using standard geometries that conform to the requirements in the City Street Design Manual such that driveway sight distance would not be affected by roadway characteristics (i.e., horizontal or vertical curves).

As discussed in Section 2.2, Hazards and Hazardous Materials, construction of the future development could require lane closures and interfere with emergency response services and evacuation routes. However, with implementation of Mitigation Measure HAZ-2, a Traffic Control Plan would be required, reducing impacts related to interferences with an adopted emergency response plan or emergency evacuation plan to less than significant. The proposed project would meet all requirements for access and ingress/egress of emergency vehicles. Driveways and internal access roads would be constructed in accordance with California Fire Code and City of San Diego Municipal Code (SDMC) requirements. For the reasons discussed above, potential impacts related to traffic hazards would be less than significant.

2.4.3.3 Circulation Movements and Alternative Transportation

Issue 3: Would the project result in a substantial impact upon existing or planned transportation systems?

Issue 4: Would the project result in a conflict with adopted policies, plans or programs supporting alternative transportation models (e.g., bus turnouts, bicycle racks)?

Issue 5: Would the project result in substantial alterations to present circulation movements that restrict access to public or private land?

The analysis of impacts under Issue 3 are addressed by Significance Determination Thresholds 5 and 6 as detailed in Section 2.4.3, above.

Impact Analysis

Project implementation would not interfere or conflict with General Plan Mobility Element policies or with implementation of planned transportation improvements in the area, as detailed in the evaluation of transportation objectives of the CMCP Transportation Element in Table 2.6-1. The project would not require changes to the existing circulation network and would be consistent with the planned circulation network including mobility planning efforts identified in the CMCP. Additionally, the project site is located in an urbanized area and would not impact existing roadways that provide direct public access to beaches, parks, or other open space areas. Therefore, impacts related to circulation movements and inconsistency with existing or planned transportation systems would be less than significant.

As described above in Section 2.4.1, Existing Conditions, MTS Bus Route #27 and #41 have multiple stops within a mile of the project site. However, there are no bus stops located directly adjacent to the project site. Class II bike lanes are present on both sides of the roadway on Genesee Avenue and on Balboa Avenue near the project site. The San Diego Bicycle Master Plan does not call for any additional bicycle facilities on any of the other study area roadways (i.e., Mount Everest Boulevard, Mount Etna Drive) (City of San Diego, 2012). All streets immediately surrounding the project site include sidewalks and striped crosswalks are provided at major intersections. Pedestrian and bike lane access would continue to be provided during both construction and operation of the proposed project. The proposed project would not conflict with adopted policies, plans, or programs related to public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. It would, however, encourage use of transit services in the project area by constructing affordable housing in a TPA. Therefore, impacts would be less than significant.

2.4.3.4 Vehicle Miles Traveled Analysis

Issue 6: Would the project conflict with or be inconsistent with CEQA Guidelines Section 15064.3 subdivision (b)?

As noted in Section 2.4.2, Regulatory Setting, CEQA Guidelines Section 15064.3, subdivision (b) provides that beginning on July 1, 2020, the provisions of this section shall apply statewide. The City is currently engaged in this process and has not yet formally adopted its updated transportation significance thresholds or its updated transportation impact analysis procedures to include VMT. Since the regulations of SB 743 have not been finalized or adopted by the City, automobile delay described above remains the measure used to determine the significance of a traffic impact. However, a VMT analysis was conducted for the proposed project for information purposes, and is summarized below. Additional detail is provided in Appendix I of this EIR.

Methodology

The VMT analysis for the proposed project was prepared in accordance with the County of San Diego's *Guidelines for Transportation Impact Studies in the San Diego Region*, January 22, 2019 (Regional TIS Guidelines).² The Regional TIS Guidelines were developed by a committee of transportation engineers, both public and private, currently operating within the San Diego Region and are primarily based on the standards set forth in OPR's Technical Advisory on Evaluating Transportation Impacts in CEQA (December 2018).³ The intention of the guidelines is to address the new transportation analysis metrics and requirements, significance thresholds, and standards enacted by SB 743.

Impact Analysis

The Regional TIS Guidelines and OPR provides several screening thresholds to determine if a project is required to do a VMT analysis based on the project's land use and location. The proposed project would allow for 100 percent affordable housing units and would be located in a planned (2035) TPA, which are criteria for screening. Therefore, a more detailed VMT analysis is not required and the proposed project is presumed to have a less than significant impact on VMT.

2.4.4 Significance of Impacts Prior to Mitigation

Project impacts related to traffic hazards, circulation movements and alternative transportation, and VMT would be less than significant. The following significant

² Institute of Transportation Engineers San Diego Section (ITE San Diego) Transportation Capacity and Mobility Task Force SB 743 Subcommittee.

³ http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf.

impacts related to traffic generation and capacity would occur with project implementation:

Impact TIA-1: Existing plus Project. The proposed project would result in significant direct impacts at the following two study intersections and one study roadway segment:

Intersections:

9. Mount Everest Boulevard & Balboa Avenue (Access Options 1 and 3)
10. Genesee Avenue & Balboa Avenue (Access Option 3)

Roadway Segments:

17. Balboa Avenue, between Cannington Drive and Charger Boulevard (all access options)

Impact TIA-2: Near-Term plus Project. The proposed project would result in significant direct impacts at the following three study intersections and two study roadway segments:

Intersections:

9. Mount Everest Boulevard & Balboa Avenue (all access options)
10. Genesee Avenue & Balboa Avenue (Access Option 3)
14. Charger Boulevard & Balboa Avenue (all access options)

Roadway Segments:

17. Balboa Avenue, between Cannington Drive and Charger Boulevard (all access options)
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (all access options)

Impact TIA-3: Cumulative plus Project. The proposed project would result in significant impacts at the following five study intersections and two study roadway segments:

Intersections:

1. Genesee Avenue & Clairemont Mesa Boulevard (all access options)
8. Clairemont Drive & Balboa Avenue (all access options)
9. Mount Everest Boulevard & Balboa Avenue (all access options)
10. Genesee Avenue & Balboa Avenue (all access options)
14. Charger Boulevard & Balboa Avenue (all access options)

Roadway Segments:

11. Mount Etna Drive, between Mount Everest Boulevard and Genesee Avenue (Access Option 1)
18. Balboa Avenue, between Charger Boulevard and I-805 Southbound Ramps (all access options)

2.4.5 Mitigation

Existing plus Project

The mitigation measures described below would be required to reduce the project's impact to intersections and roadway segments to a less-than-significant level. The effectiveness of the mitigation measures is shown in **Table 2.4-14**.

Intersections

TRA-1: Mount Everest Boulevard & Balboa Avenue Intersection Modifications (Access Options 1 and 3). Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the restriping of the northbound and southbound approaches on Mount Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing, satisfactory to the City Engineer. Improvements shall be completed and operational prior to first occupancy.

TRA-2: Genesee Avenue & Balboa Avenue Intersection Modifications (Access Option 3). Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the optimization of signal timing or installation of traffic systems management (TSM) strategies (e.g., adaptive signal technology) to maximize efficiency of the existing roadway through improved signal communications and operations satisfactory to the City Engineer. Improvements shall be completed and operational prior to first occupancy.

The City's *Traffic Signal Communications Master Plan (TSCMP)* (December 2014) identifies deficient intersections throughout the City where implementation of traffic signal communications and ITS improvements could be done to improve signal communication and operations. This intersection of Genesee Avenue & Balboa Avenue is identified in the TSCMP as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. Therefore, this impact would be reduced to a less than significant level for Access Option 3.

**Table 2.4-14
Mitigated Peak Hour Intersection Level of Service – Existing plus Project**

LOS = Level of Service; M = Mitigated

SOURCE: Chen Ryan 2019 (Appendix I-4)

Roadway Segments

The segment of Balboa Avenue between Cannington Drive and Charger Boulevard is impacted by all three access options and is currently built to its ultimate classification per the currently adopted CMCP. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as right-of-way constraints, there are no feasible improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection recommended in **Mitigation Measure TRA-3**, would partially mitigate the project's impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, this impact would remain significant and unavoidable for all access options.

Near-Term plus Project

The mitigation measures described below would be required to reduce the project impact to a less-than-significant level. The effectiveness of the mitigation measures is shown in **Table 2.4-15**.

Intersections

Implementation of **Mitigation Measure TRA-1** at Mount Everest Boulevard & Balboa Avenue described under the Existing plus Project discussion would also mitigate the project's impact for all access options during the Near-Term plus Project condition.

Implementation of **Mitigation Measure TRA-2** described at Genesee Avenue & Balboa Avenue under the Existing plus Project discussion would also mitigate the project's Near-Term plus Project impact to a less-than-significant level for Access Option 3.

Implementing the following improvement at the Charger Boulevard & Balboa Avenue would reduce intersection delays to pre-project conditions and impacts would be less than significant for all access options (Table 2.4-15).

TRA-3: Charger Boulevard & Balboa Avenue Intersection Modifications (all access options). Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the restriping of the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing satisfactory to the City Engineer. Improvements shall be completed and operational prior to first occupancy.

Roadway Segments

The two impacted segments of Balboa Avenue, between Cannington Drive and Charger Boulevard, and between Charger Boulevard and I-805 Southbound Ramps, are currently built to their ultimate classification per the currently adopted CMCP. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, there are no feasible segment improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection recommended in **Mitigation Measure TRA-3** would partially mitigate the project's impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, the roadway segment impacts would remain significant and unavoidable for all access options.

Cumulative plus Project

The mitigation measures described below would be required to reduce the project impact to a less-than-significant level. The effectiveness of the mitigation measures is shown in **Table 2.4-16**.

Intersections

Implementation of **Mitigation Measure TRA-1** described under the Existing plus Project discussion would mitigate the impact at Mount Everest Boulevard & Balboa Avenue for all access options during the Cumulative plus Project traffic scenario.

Implementation of **Mitigation Measure TRA-2** described above under Existing plus Project traffic conditions would mitigate the project's Cumulative plus Project impacts to Genesee Avenue & Balboa Avenue for all access options.

Implementing of **Mitigation Measure TRA-3** described above under Near-Term plus Project discussion would reduce intersection delays at Charger Boulevard & Balboa Avenue to pre-project conditions and would reduce the Cumulative plus Project impacts to a less than significant level for all access options (Table 2.4-16).

TRA-4: Genesee Avenue & Clairemont Mesa Boulevard Adaptive Signal Control System (All Access Options). Prior to issuance of the first building permit, Owner/Permittee shall pay its fair share toward optimizing signal timing or installing traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway through improved signal communications and operations, satisfactory to the City Engineer.

**Table 2.4-16

LOS = Level of Service; M = Mitigated

SOURCE: Chen Ryan 2019 (Appendix I-4)

TRA-5: Clairemont Drive & Balboa Avenue Adaptive Signal Control System (All Access Options). Prior to issuance of the first building permit, Owner/Permittee shall pay its fair share toward optimizing signal timing or installing traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway through improved signal communications and operations, satisfactory to the City Engineer.

Implementation of the improvements noted above in **Mitigation Measures TRA-4** and **TRA-5** would mitigate the project's Cumulative plus Project impact at the two study intersections listed above to a less-than-significant level for all access options. These intersections are identified in the TSCMP as deficient and in need of repair. Improving signal timings could result in an increase in intersection capacity, vehicle throughput, and reduction in vehicle delays. However, there is no specific mitigation program established by the City that would ensure the improvements would be implemented. Therefore, unless and until a specific mitigation program is created by the City to accommodate proportionate contributions toward the implementation of adaptive signal controls or other improvements at these locations, the County cannot assume that payment of its fair share of the mitigation improvements would reduce or avoid the project's cumulative impact at the intersections of Genesee Avenue & Clairemont Mesa Boulevard and Clairemont Drive & Balboa Avenue. Therefore, Cumulative plus Project impacts to these two intersections would remain significant and unavoidable.

Roadway Segments

Similar to the Existing plus Project and Near-term plus Project conditions, the impacted segment of Balboa Avenue between Charger Boulevard and I-805 Southbound Ramps is currently built to its ultimate classification per the currently adopted CMCP. Based on the existing land use fronting this roadway (i.e. residential and school uses) as well as the right-of-way constraints, there are no feasible segment improvements that would expand the capacity of the roadway segment. The implementation of adaptive signal controls along the Balboa Avenue corridor, as well as signal modifications at the Charger Boulevard & Balboa Avenue intersection recommended in **Mitigation Measure TRA-3** would partially mitigate the project's impacts. However, the County cannot assure that the City would implement adaptive signal controls along the Balboa Avenue corridor. Therefore, this Cumulative plus Project roadway segment impact would remain significant and unavoidable for all access options.

Mount Etna Drive is currently built to its ultimate classification per the currently adopted CMCP. Based on the classification of this roadway, there is insufficient right-of-way and street parking removal limitations that would prevent any improvements to the capacity of the impacted roadway segment. Therefore, this

Cumulative plus Project impact would remain significant and unavoidable for Access Option 1.

2.4.6 Significance of Impacts After Mitigation

The significance of intersection and roadway segment impacts after implementation of mitigation measures is summarized in **Table 2.4-17**. As shown in the table, proposed mitigation measures would reduce all direct intersection impacts identified for the Existing plus Project and Near-Term plus Project traffic scenarios to less-than-significant levels. Two intersection impacts would remain significant and unavoidable in the Cumulative plus Project traffic scenario for all access options:

1. Genesee Avenue & Clairemont Mesa Boulevard
8. Clairemont Drive & Balboa Avenue

Significant and unavoidable impacts were identified for one roadway segment in the Existing plus Project traffic scenario, and two roadway segments in the Near-Term plus Project and Cumulative plus Project traffic scenarios.

2.4.8 Conclusions

The proposed project would not result in impacts related to traffic hazards, circulation movements and alternative transportation, and VMT. Direct and cumulative impacts would occur related to trip generation and capacity.

Project impacts to study intersections and roadway segments would occur during Existing plus Project (**Impact TIA-1**), which would be mitigated or partially mitigated by **Mitigation Measures TRA-1 and TRA-2**. However, significant and unavoidable roadway segment impacts would remain along Balboa Avenue.

Project impacts to study intersections and roadway segments would also occur as a result of the various access options during Near-term plus Project (**Impact TIA-2**), which would be mitigated or partially mitigated by **Mitigation Measures TRA-1, TRA-2 and TRA-3**. However, significant and unavoidable roadway segment impacts would remain along Balboa Avenue.

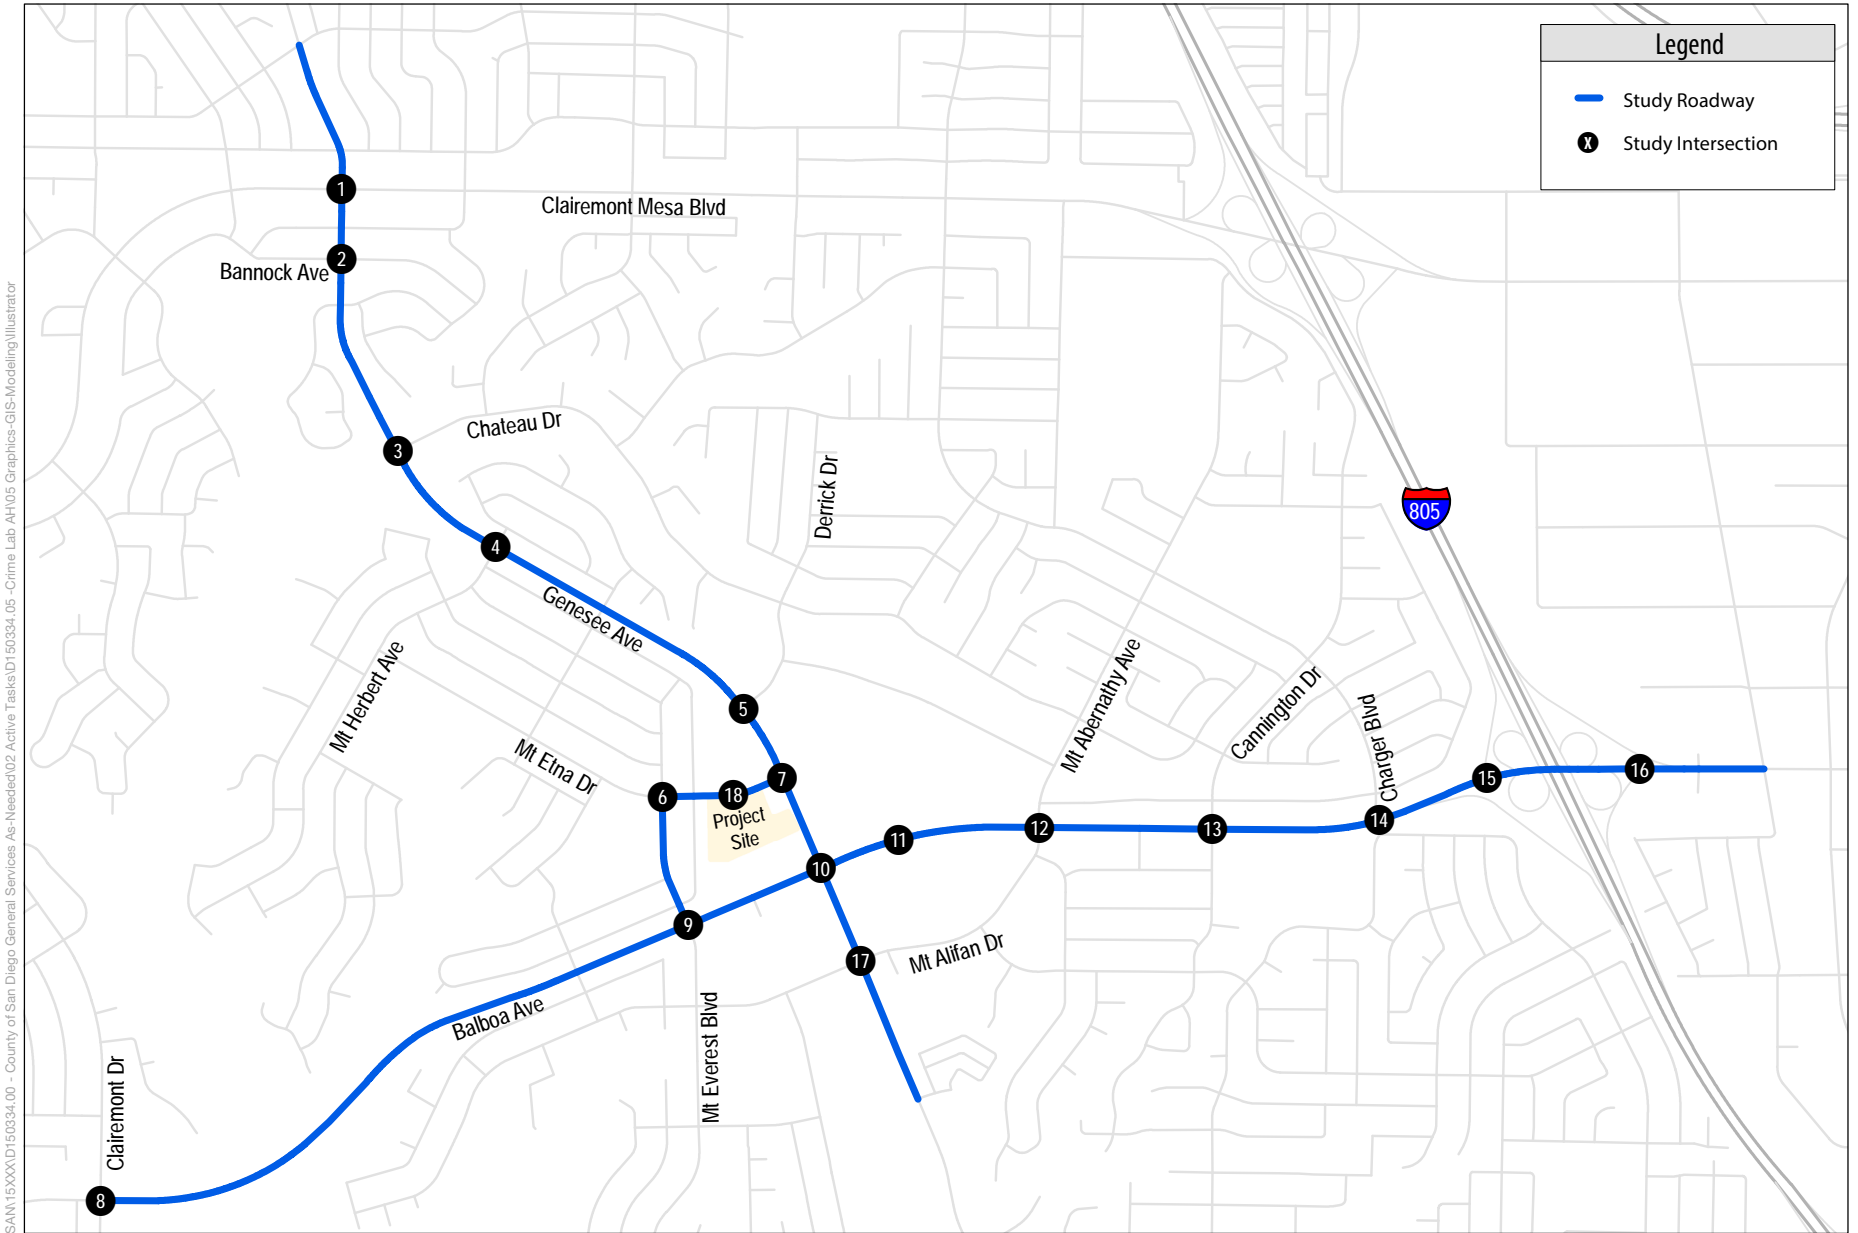

Project impacts to study intersections and roadway segments would also occur as a result of the various access options during Cumulative plus Project (**Impact TIA-3**), which would be mitigated or partially mitigated by **Mitigation Measures TRA-1, TRA-2 and TRA-3**. However, significant and unavoidable impacts would remain at two intersections and two roadway segments along Mount Etna Drive and Balboa Avenue because **Mitigation Measures TRA-4 and TRA-5** cannot be assured by the County and there are no other feasible improvements that can be implemented for the impacted roadway segments.

CHAPTER 3.0 ENVIRONMENTAL EFFECTS FOUND NOT TO BE SIGNIFICANT

This chapter of the EIR discusses effects that were identified as not to be significant. These sections include 3.1 Aesthetics, 3.2 Energy, 3.3 Greenhouse Gas Emissions, 3.4 Land Use and Planning, 3.5 Population and Housing, 3.6 Public Services, 3.7 Recreation, and 3.8 Utilities and Service Systems.

Each environmental issue area describes the following topics.

- Existing conditions
- Regulatory framework
- Analysis of project effects and determination as to significance
- Cumulative impacts
- Conclusion

This page intentionally left blank

3.1 Aesthetics

This section provides an assessment of potential impacts related to aesthetics and visual resources that could result from implementation of the proposed project. Potential impacts addressed in this section include impacts to scenic vistas, degradation of visual character, creation of a new source of light or glare, visual incompatibility with surrounding development, loss of distinctive trees, or a substantial change in the existing landform.

Comments related to aesthetics received during the public comment period for Notice of Preparation (NOP) included concerns regarding the maximum allowable height, shade and/or shadow of adjacent properties, incompatibility with surrounding development, new light and glare sources, spillover light pollution, and negative impacts on existing community character within Clairemont Mesa. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to impact aesthetics. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.1.1 Existing Visual Landscape

The project site is located at the intersection of Genesee Avenue and Mount Etna Drive in the Clairemont Mesa community. The project site is surrounded by a mixture of commercial and residential development, with an assortment of commercial land uses and neighborhood amenities within a 0.5-mile radius of the project site. Figure 1-2 shows the existing land uses in the vicinity of the project site. **Figure 3.1-1** shows two views from north and south of the project site, showing the general commercial character of the project's vicinity. The project site is bound by Mount Etna Drive to the north of the project site with one- and two-story commercial and medical buildings further north (Viewpoint 1 on Figure 3.1-1). The project site is bound to the east by a three-story medical office building, with Genesee Avenue and a commercial shopping center located further east. South of the project site are commercial and medical office buildings ranging from one- to ten-stories, and their associated surface parking lots (Viewpoint 2 on Figure 3.1-1). A San Diego Gas and Electric (SDG&E) easement that currently serves as a parking lot for the previous use of the project site is located to the west of the project site, which also includes overhead power transmission lines. Single-story single-family residential uses are located further west of the SDG&E easement.

The project site is currently developed with the former San Diego County Regional Crime Lab (Crime Lab) facility. Existing structures onsite include a one-story, 66,000-square-foot (SF) building in the center of the project site, a 1,500 SF garage on the southwestern portion of the project site, and a two-story 36,000 SF warehouse building on the northeastern portion of the project site.

Two unconnected surface parking lots are located to the east of the Crime Lab buildings, one accessed from Genesee Avenue and the other from Mount Etna Drive. The project site includes minimal ornamental landscaping adjacent to the building along Mount Etna Drive and in courtyards on the eastern portion of the project site.

3.1.1.1 Views of the Project Site

Public views of the project site are available to motorists, cyclists, and pedestrians traveling along Mount Etna Drive, Genesee Avenue, and Balboa Avenue. An aerial map of key public views (Viewpoints 3 through 7) of the project site are shown in **Figure 3.1-2**.

Viewpoint 3 (shown on **Figure 3.1-3**) shows the view of the project site from the northeast looking southwest at the intersection of Genesee Avenue and Mount Etna Drive. From this intersection, existing views include the three-story medical office building located east of the project site, along with street trees along Mount Etna Drive largely screening the project site. The two-story Crime Lab building is partially visible behind street trees.

Viewpoint 4 (also shown on Figure 3.1-3) has views of the project site from the southeast. Viewpoint 4 is from the intersection of Balboa Avenue and Genesee Avenue looking northwest. Views of the project site are completely obstructed from Viewpoint 4, with the intersection in the foreground and the one-story, ten-story, and seven-story commercial buildings in the background obstructing the project site.

Viewpoint 5 is shown on **Figure 3.1-4**, showing the view of the project site from Balboa Avenue looking north. Existing views of the project site are largely screened by the one-story and ten-story commercial buildings. A portion of the existing one-story Crime Lab building is visible in between the commercial buildings, slightly obstructed from view due to street trees and the commercial building's associated surface parking lot.

Viewpoint 6 (Figure 3.1-4) includes the view of the project site from Mount Etna Drive looking southeast. The driveway entrance to the SDG&E easement is in the foreground, with the two-story Crime Lab building visible behind existing street trees.

Viewpoint 7 is shown on **Figure 3.1-5**, which is a view of the project site from Mount Davis Avenue west of the project site looking east. The project site is completely obstructed from view due to intervening single-family, one-story residential homes.

3.1.1.2 Neighborhood Visual Character

The Clairemont Mesa Community Plan (CMCP) describes the community as an attractive place to live, work and play because of the community's many attributes, including the visual aesthetics of the community's nearby canyons in an urban environment, which has contributed to the community's sense of place (City of San Diego 2011). The Community Plan lists distinctive features of the community as including low-density residential development adjacent to canyons and parks, and trees planted in the street medians and along sidewalks.

The project site is located along the western edge of the Community Core area of the larger Clairemont Mesa Community Planning Area. According to the CMCP, the Community Core area is the focal point of the community and provides commercial services within walking distances of residential neighborhoods. The Community Core area includes the project site and both the Balboa Mesa and Genesee Plaza shopping centers, located southeast and east of the project site, respectively. According to the CMCP, these centers are in fair condition and are underutilized with one-story buildings surrounded and separated by expansive parking and vacant land. The surrounding commercial development adjacent to and south of the project site includes the Balboa Towers, which are two medical buildings that are seven and ten stories in height. In addition, one-, two-, and three-story commercial buildings are located north and east of the project site. As previously detailed, the 50-foot SDG&E easement is located west of the project site, with single-family residential homes located further west of the easement.

3.1.1.3 Scenic Vistas

The City's General Plan and the CMCP do not include any formal designation of scenic vistas within the community. However, the CMCP states that many of the neighborhoods along the mesa area overlook Mission Bay and the Pacific Ocean to the west, Fortuna Mountain and Cowles Mountain to the east and the open space canyon system contain scenic vistas (City of San Diego 2011). To protect some of these views, the Clairemont Mesa Height Limitation Zone was established in 1989, maintaining a 30-foot height limit throughout the majority of the community. The project site itself does not feature any scenic resources or scenic views, such as to mountains, canyons, bays, or the Pacific Ocean.

3.1.1.4 Shade and Shadow

Shading from buildings and structures has the potential to block sunlight on adjacent properties. Although shading is common and expected in urban areas and can be considered a beneficial feature when it provides protection from excess sunlight and heat, shading can have an adverse impact if it interferes with activities that rely on sunlight to function properly, or to provide physical comfort, or to support commercial activity. Such uses include routinely usable outdoor

spaces associated with residential, recreational, and institutional uses (e.g., schools, convalescent homes), commercial pedestrian-oriented outdoor eating areas or other spaces, operations such as nurseries and solar collectors. The existing project site consists of one- and two-story buildings, which, due to their height, do not extend substantial shade or shadows onto offsite properties.

3.1.1.5 Light and Glare

Light introduction can be a nuisance to adjacent residential areas, diminish the view of the clear night sky, and if uncontrolled, can cause disturbances for motorists traveling in the area. Residences are considered light sensitive since occupants have expectations of privacy during evening hours and may be subject to disturbances by bright light sources. Light spill is typically defined as the presence of unwanted light on properties adjacent to a property being illuminated. Existing sources of light are present on the project site including existing street lamps in the surface parking lot and exterior security lighting on the existing building. The area surrounding the project site consists of developed land with commercial, office, and residential uses, which emit nighttime light typical of an urban community. Off-site sources of night lighting include street lighting along Mount Etna Drive, Genesee Avenue, Balboa Avenue, and lighting within the adjacent SDG&E easement parking lot. In addition, the surrounding area includes illuminated street signage, commercial lighting from adjacent shopping centers, and vehicular lights from cars along adjacent roadways.

Glare is caused by the reflection of sunlight or artificial light by highly polished surfaces such as windows or reflective materials and, to a lesser degree, from broad expanses of light-colored surfaces or vehicle headlights. Perceived glare is unwanted and potentially objectionable sensation as observed by a person as they look directly into the light source of a luminaire. Daytime glare generation in urban areas is typically associated with buildings with exterior facades largely or entirely comprised of highly reflective glass. Glare can also be produced during evening and nighttime hours by the reflection of artificial light sources, such as automobile headlights. Glare generation is typically related to either moving vehicles or sun angles, although glare resulting from reflected sunlight can occur regularly at certain times of the year. Glare-sensitive uses include residences and transportation corridors. The project site currently does not generate glare, as the existing building is made up of non-reflective materials without large expanses of glass.

3.1.2 Regulatory Setting

Federal

There are no federal regulations related to aesthetics.

State

California Scenic Highway Program

California adopted a Scenic Highway Program (Streets and Highways Code, Section 260 et seq,) in 1963 to preserve and protect scenic highway corridors from change that would diminish the visual quality of areas that are adjacent to highways. The scenic designation is based on the amount of natural landscape visible by motorists, the scenic quality of the landscape, and the extent to which development intrudes upon the motorist's enjoyment of the view.

Local

City of San Diego General Plan

The General Plan includes citywide design goals and policies regarding visual elements that complement the goals for pedestrian-oriented and walkable villages from the City of Villages strategy. A village environment includes high-quality public spaces, civic architecture, and the enhancement of visual quality of all types of development.

The Urban Design Element of the General Plan establishes a set of design principles from which future physical design decisions can be based. Policies call for respecting San Diego's natural topography and distinctive neighborhoods, providing public art, and encouraging the development of walkable, transit-oriented communities.

In its introduction, the Urban Design Element of the General Plan states:

As the availability of vacant land becomes more limited, designing infill development and redevelopment that builds upon our existing communities becomes increasingly important. A compact, efficient, and environmentally sensitive pattern of development becomes increasingly important as the City continues to grow. In addition, future development should accommodate and support existing and planned transit service (City of San Diego 2008).

The General Plan Urban Design Element policies involve architectural and landscape elements, as well as the design of transit, parking, and residential. This element also contains policies related to public spaces and cultural amenities that contribute to the character of neighborhoods. Section 3.4 of this EIR, Land Use and Planning, analyzes the project's consistency with the General Plan's policies, including the Urban Design Element.

Clairemont Mesa Community Plan

The CMCP includes an Urban Design Element that identifies Clairemont Mesa's distinctive image and how this image can be preserved and translated into the built environment. The CMCP states that the community's distinctive attributes include the well-established single-family neighborhoods, low-scale character adjacent to canyons and parks, and a park setting with trees planted in street medians and along sidewalks. To protect the low-scale character of the community as well as vistas to Mission Bay and the Pacific Ocean, the Clairemont Mesa Height Limitation Zone was established in 1989, maintaining a 30-foot height limit throughout the majority of the community. The CMCP notes that with the lack of significant undeveloped land in the community, changes in housing will undoubtedly occur by the replacement of existing housing with new housing, probably at higher densities. In January 2017, the City initiated a comprehensive update to the CMCP, which is currently ongoing and is expected to allocate more residential housing to the community.

City of San Diego Municipal Code

The San Diego Municipal Code (SDMC) includes several regulations related to aesthetics and design, including but not limited to regulations on height (Section 131.0431); building setbacks (Section 131.0431); landscaping, planting, and irrigation standards (Section 142.0404, Section 142.0409, and Section 142.0403); and screening and fencing requirements (Section 142.0910).

3.1.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant aesthetics impact would occur if the project would:

Issue 1: Result in a substantial obstruction of any vista or scenic view from a public viewing area as identified in the community plan;

Issue 2: Result in the creation of a negative aesthetic site or project;

Issue 3: Result in project bulk, scale, materials, or style which would be incompatible with surrounding development;

Issue 4: Result in substantial alteration to the existing or planned character of the area, such as could occur with the construction of a subdivision in a previously undeveloped area. Note for substantial alteration to occur, new development would have to be of a size, scale, or design that would markedly contrast with the character of the surrounding area;

Issue 5: Result in the loss of any distinctive or landmark tree(s), or stand of mature trees as identified in the community plan;

Issue 6: Result in substantial change in the existing landform;

Issue 7: Result in substantial light or glare which would adversely affect daytime or nighttime views in the area.

3.1.3.1 Scenic Views and Vistas

Issue 1: Would the project result in substantial obstruction of any vista or scenic view from public viewing areas identified in the community plan?

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

The proposed project includes an amendment to the CMCP and a rezone that would allow for a future development on the project site, including a maximum of 404 residential units with a height of up to 70 feet. In addition, the project would include site demolition and preparation activities. As previously detailed above, the City's General Plan and the CMCP do not include any formal designation of scenic vistas within the community. However, the CMCP states that many of the neighborhoods along the mesa area overlook Mission Bay and the Pacific Ocean to the west, Fortuna Mountain and Cowles Mountain to the east, and the open space canyon system. The project site itself does not feature any scenic views or contain other scenic resources, such as mountains, canyons, bays or the Pacific Ocean. The proposed project is located approximately 0.8 miles east of Tecolote Canyon, and approximately 4.5 miles east of the Pacific Ocean and Mission Bay. Due to the topography and distance, the project site is not within direct line of sight of Tecolote Canyon, Mission Bay, or the ocean. Therefore, there would be no impacts to scenic vistas with implementation of the proposed project, including both the future development and site demolition and preparation activities.

3.1.3.4 Adverse Effects to Visual Character

Issue 2: Would the project result in the creation of a negative aesthetic site or project?

Issue 4: Would the project result in substantial alteration to the existing or planned character of the area, such as could occur with the construction of a subdivision in a previously undeveloped area?

Impact Analysis

Community Plan Amendment and Rezone

The project site is currently occupied by the existing one- and two-story Crime Lab facility and associated surface parking lots. The Community Plan Amendment (CPA) and rezone of the project site would allow for the future development of a maximum of 404 residential units with a height of up to 70 feet. While the exact design of the future development is unknown at this time, the proposed Community Plan Implementation Overlay Zone (CPIOZ) Type A (CPIOZ-A) supplemental development regulations included in Appendix B of this EIR provide aesthetic regulations that would guide the design of the future development. Specifically, those regulations include, and are not limited to:

- 1) Community accessible active ground floor space oriented towards the fronting public streets;
- 2) Building setbacks intended to encourage pedestrian scale and compatibility with adjacent uses;
- 3) Landscape screening of any surface parking directly adjacent to public rights-of-way;
- 4) Landscaping of the project site, and the planting of street trees along public street frontages to provide a shaded pedestrian environment;
- 5) Building articulation that diminishes the appearance of mass and bulk, and that creates visual interest as viewed at the pedestrian scale;
- 6) Screening and fencing of storage areas, ground-level and rooftop mechanical equipment, and maintenance areas; and
- 7) Residential open space, including: private (balcony, patio, or roof terrace) exterior open space.

The project site is currently developed with typical office buildings that feature a minimum of articulation, landscaping, and urban design features. The proposed project would replace the existing building with new buildings with high quality architecture and articulation, along with pedestrian facilities, and landscaping and open space. The design of the future development would be subject to the standards in the CPIOZ-A and reviewed for compliance during the building permit process. In addition, the existing community does not have an established architectural theme, and therefore the proposed project would not be deviating from an established thematic character. While the height of the future on-site structure would be increased from one and two-story buildings to a maximum height of 70 feet, the proposed height would be consistent with the two existing

Balboa Towers that are located south of the project site, which are seven-stories and ten-stories in height. In addition, as the future development would be an affordable housing project, the development would be allowed to exceed the community's 30-foot height limit overlay, in accordance with the SDMC Section 101.0452.5.D. Although implementation of the proposed project would include new development that would change the use and visual characteristics of the project site, it would not substantially degrade the surrounding visual character or quality. As such, the proposed project would not result in the creation of a negative aesthetic site or project and would not result in substantial alteration to the existing character of the area. Therefore, impacts would be less than significant.

Site Demolition and Preparation

In addition to the CPA and a rezone of the project site, the proposed project also includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. Site demolition and preparation activities would include the temporary presence and use of heavy machinery including, but not limited to large trucks, bulldozers, and a construction staging area. However, construction activities are considered a temporary, short-term visual affect. Therefore, site demolition and preparation activities would not result in the creation of a negative aesthetic or result in a substantial alteration to the existing or planned character of the area, and impacts would be less than significant.

3.1.3.5 Incompatible with Surrounding Development

Issue 3: Would the project result in bulk, scale, materials, or style which would be incompatible with the surrounding development?

Impact Analysis

Community Plan Amendment and Rezone

As previously detailed, the proposed project would allow for the future development of a maximum of 404 residential units with a height of up to 70 feet. While the exact design of the future development is unknown at this time, the proposed CPIOZ-A supplemental development regulations included in Appendix B of this EIR provide urban design regulations applicable to the future residential development. These regulations include building setbacks, landscape and streetscape regulations, and building articulation standards to diminish overall mass of buildings and create variation from an exterior perspective. While building materials and style are unknown at this time, the project would be subject to the standards in the CPIOZ-A and reviewed for compliance during the

building permit process, which would ensure building materials and styles compatible with the surrounding development. In addition, the existing community does not have an established architectural theme, and therefore the proposed project would not be deviating from an established thematic character.

While the height of the structures on site would be increased from one and two-story buildings to a maximum height of 70 feet the proposed height would be consistent with the two existing Balboa Towers that are located south of the project site, which are seven stories and ten stories in height. Due to the proposed height of the future development, a shade and shadow analysis was completed to determine the future development's resulting shadows to determine incompatibility with the surrounding development.

As previously detailed, the consequences of shadows on land uses can be positive, including cooling effects during warm weather; or negative, such as loss of warmth during cooler weather and loss of natural light for landscaping and human activity. In order to determine the extent of any negative shading impacts on surrounding development, shading diagrams were prepared to demonstrate the extent shadows would be generated by the proposed project, assuming compliance with the CPIOZ-A supplemental development regulations.

Figure 3.1-6 shows the shade and shadow projections the project could produce during the winter solstice (December 21), when sun angles are lowest, and shadows are at their longest. As shown in this figure, shadows from the project site would largely be cast onto surrounding streets, including Mount Etna Drive, Genesee Avenue, and the adjacent SDG&E easement. Shadows would be cast onto the three-story medical building east of the project site and onto a portion of the commercial buildings north of the project site. However, these shadows would largely be cast on driveways, parking lots, and ornamental landscaping fronting the buildings, where shadows would not interfere with pedestrians congregating or on uses that rely on sunlight. **Figure 3.1-7** shows the shadow projections during the spring equinox (March 21), which shows that shadows would largely be cast onto the SDG&E easement, Mount Etna Drive, and Genesee Avenue. The medical building east of the project site would have shadows cast on the structure, however, the shadows would be cast at various times and locations throughout the day. **Figure 3.1-8** shows the shadow projections during the summer solstice (June 21), when shadows are at their shortest. As shown on this figure, shadows would be cast onto the SDG&E easement and Genesee Avenue. Shadows would be cast on the medical building east of the project site only in the evening. **Figure 3.1-9** shows shadow projections during the fall equinox (September 21). Similar to Figure 3.1-7, shadows would largely be cast onto the SDG&E easement, Mount Etna Drive, and Genesee Avenue. The medical building east of the project site would have shadows cast on the structure, however, the shadows would be cast at various times and locations throughout the day. While shadows would be cast onto a

portion of the surrounding development, the shadows would not be cast on areas that rely on sunlight to function properly, such as pedestrian-oriented outdoor eating areas, schools, nurseries, or solar collectors.

With implementation of the proposed supplemental development regulations included in Appendix B of this EIR, the design of the future development would not be incompatible with the bulk, scale, materials, or style with the surrounding development. In addition, impacts associated with shade and shadow of the future development would not be visually incompatible with surrounding uses and character of the project area. Therefore, impacts would be less than significant.

Site Demolition and Preparation

Site demolition and preparation activities would include the temporary presence and use of heavy machinery including, but not limited to large trucks, bulldozers, and a construction staging area. However, construction activities are considered a temporary, short-term visual affect. Therefore, site demolition and preparation activities would not result in visual incompatibility with surrounding uses, and impacts would be less than significant.

3.1.3.6 Loss of Existing Visual Features

Issue 5: Would the project result in the loss of any distinctive or landmark tree(s), or stand of mature trees as identified in the community plan?

Issue 6: Would the project result in substantial change in the existing landform?

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

The project site currently includes the vacant Crime Lab building, associated surface parking lots, and minimal ornamental landscaping adjacent to the building along Mount Etna Drive and in courtyards on the eastern portion of the project site. No distinctive or landmark trees or stand of mature trees currently exist on the project site. Therefore, implementation of the proposed project, including both the future residential development and site demolition activities, would not result in the loss of distinctive trees, and impacts would be less than significant.

The site demolition and preparation activities would deliver a rough graded pad for future development. The graded pad would include a maximum two percent slope to ensure that the pad drains correctly. Site preparation activities would include approximately 1,200 cubic yards of soil exported. According to the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016), projects that are considered to significantly alter the natural landform

would include altering more than 2,000 cubic yards of earth. Therefore, with implementation of the proposed project, no substantial change in the existing landform would occur, and impacts would be less than significant.

3.1.3.3 New Sources of Light and Glare

Issue 7: Would the project result in substantial light or glare which would adversely affect daytime or nighttime views in the area?

Impact Analysis

Community Plan Amendment and Rezone

The introduction of light can be a nuisance to adjacent residential areas and can diminish the view of the night sky. Currently, the project site consists of the Crime Lab facility, which includes existing street lamps in the surface parking lot and exterior security lighting on the existing buildings. The area surrounding the project site consists of developed land with commercial and residential uses, which emit nighttime light typical of an urban community. Implementation of the proposed project would result in the addition of potential lighting sources associated with the future residential development, including lighting from residential units, vehicular traffic, and parking lot lighting. While the proposed project would result in the addition of lighting sources, there are existing light sources already occurring on and surrounding the project site. Nighttime views near the project site already include existing urban light pollution, and the contribution from the project site would be minimal. Additionally, all lighting installed would be in compliance with the SDMC Section 142.0740 Outdoor Lighting Regulations. Therefore, the future development would not result in substantial new light sources, and impacts would be less than significant.

Daytime glare is typically caused by the reflection of sunlight or artificial light from highly polished surfaces, such as window glare or reflective materials. The project site currently does not generate glare, as the existing building is made up of non-reflective materials without large expanses of glass. While the design of the future development is unknown at this time, residential buildings typically use non-reflective building materials, such as stucco, wood, or stone veneer. While building materials are unknown at this time, the project would be subject to the standards in the CPIOZ-A and reviewed for compliance during the building permit process. In compliance with the SDMC Section 142.0730, the proposed project would be required to have less than 50 percent of the building's exterior comprised of reflective material that has a light reflectivity factor greater than 30 percent. Therefore, impacts related to glare would be less than significant with implementation of the proposed project.

Site Demolition and Preparation

Site demolition and preparation activities would include the presence and use of heavy machinery including, but not limited to large trucks, bulldozers, and a construction staging area, which would not include large amounts of lighting or reflective materials. No nighttime lighting is anticipated for the proposed project. Construction activities are considered a temporary, short-term visual affect. Therefore, site demolition and preparation activities would not result in substantial light or glare that would adversely affect daytime or nighttime views in the area.

3.1.4 Cumulative Impact Analysis

The geographic context for the analysis of cumulative impacts with regards to visual character and quality, and creation of substantial light and glare are public views of the project site and surrounding areas. The approved or planned cumulative projects within the surrounding area include commercial, residential, and educational land uses. The proposed project, when considered with other projects in the cumulative area, could have the potential to change the visual character of the surrounding area. However, because the area surrounding the project site is existing residential and commercial uses, the visual character or quality of the project site and surrounding area would not be substantially degraded. The proposed project would be consistent with the existing height of existing buildings to the south and would be required to adhere to proposed CPIOZ-A supplemental development regulations included in Appendix B of this EIR. Therefore, when considered with other projects, the project's incremental contribution to impacts on visual character or quality would not be cumulatively considerable.

While the proposed project would include daytime and nighttime exterior light in the form of residential lighting and headlights, the proposed project would be in compliance with applicable light and glare regulations. The proposed project, when considered with other projects, could have the potential to result in substantial light and glare impacts. However, the proposed project and the cumulative projects would be required to comply with the City's existing lighting and glare regulations. Therefore, the project's incremental contribution to impacts on light and glare would not be cumulatively considerable.

3.1.5 Significance of Impacts Prior to Mitigation

Impacts related to aesthetics and visual resources would be less than significant.

3.1.6 Mitigation

No mitigation measures are required.

3.1.7 Conclusion

Due to the topography and distance, the project site is not within direct line of sight of mountains, canyons, bays, or the Pacific Ocean. Therefore, impacts to scenic vistas with implementation of the proposed project, including both the future development and site demolition and preparation activities, would be less than significant.

Although implementation of the proposed project would include new development that would change the use and visual characteristics of the project site, it would not substantially degrade the surrounding visual character or quality. As such, the proposed project would not result in the creation of a negative aesthetic site or project and would not result in substantial alteration to the existing character of the area, such as a subdivision in a previously undeveloped area.

With implementation of the proposed CPIOZ-A supplemental development regulations included in Appendix B of this EIR, the design of the future development would not be incompatible with the bulk, scale, materials, or style with the surrounding development. In addition, impacts associated with shade and shadow of the future development would not be incompatible with surrounding uses.

Implementation of the proposed project would result in the addition of potential lighting sources. However, the proposed project would be in compliance with the SDMC related to lighting and glare. Therefore, impacts related to aesthetics and visual resources would be less than significant.

3.2 Energy

This section analyzes impacts on energy resources due to construction and operation of the project. This section provides a summary of the project's anticipated energy needs, impacts, and conservation measures. Information found herein, as well as other aspects of the project's energy implications, are discussed in greater detail elsewhere in this EIR, including in Chapter 1.0, Project Description, Location, and Environmental Setting, and Sections 2.1, Air Quality; 2.4, Transportation and Traffic; 3.3, Greenhouse Gas Emissions; and 3.4, Land Use and Planning.

There were no comments related to energy received during the public comment period for the Notice of Preparation (NOP). The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.2.1 Existing Conditions

3.2.1.1 Electrical Energy

San Diego Gas & Electric (SDG&E) is the electricity provider for the project area. SDG&E, a Sempra Energy Utility, is a regulated public utility that provides electrical services to approximately 3.6 million people in 25 communities and two counties (San Diego and southern Orange counties) over its 4,100-square-mile service area (SDG&E 2019). In 2017, SDG&E's total electricity sales in the County of San Diego was estimated to be 19,346 gigawatt hours (GWh) (CEC 2018a).

SDG&E produces and purchases their energy from a mix of conventional and renewable generating sources. **Table 3.2-1** shows the electric power mix that was delivered to retail customers for SDG&E compared to the statewide power mix for 2017, the most recent year in which data is available. Total electricity sales/usage for SDG&E is shown in Table 3.2-1 compared to the statewide electricity sales/usage from the most recent year for which data is available.

3.2.1.2 Natural Gas Supply

Natural gas is used for cooking, space heating, water heating, electricity generation, and as an alternative transportation fuel. SDG&E is responsible for providing natural gas supply to the project. In 2013, SDG&E's total natural gas sales in the County of San Diego was estimated to be 480 million therms or 47.9 trillion BTU (CEC 2018b).

**Table 3.2-1
Electric Power Mix Delivered to Retail Customers in 2017**

Energy Resource	2017 SDG&E (Percent)	2017 CA Power Mix (for comparison) (Percent)
Eligible Renewable^a	44	29
Biomass & bio-waste	2	2
Geothermal	0	4
Small hydroelectric	0	3
Solar	21	10
Wind	21	10
Coal	0	4
Large Hydroelectric	0	15
Natural Gas	39	34
Nuclear	0	9
Other	0	<1
Unspecified sources of power^b	17	9
Total	100 Percent	100 Percent

^a The Eligible Renewables category is further delineated into the specific sources: biomass & waste, geothermal, small hydroelectric, solar, and wind.

^b "Unspecified sources of power" means electricity from transactions that are not traceable to specific generation sources.

SOURCES: CEC 2018c.

3.2.1.3 Transportation Energy

Transportation energy is calculated from fuels used to power on-road and off-road vehicles. Based on available fuel consumption data from the CEC, in 2017, residences and businesses in all of San Diego County (including incorporated municipalities) consumed a total of 1.23 billion gallons of gasoline and 92 million gallons of diesel fuel (CEC 2019).

SDG&E is required to commit to the use of renewable energy sources for compliance with the Renewables Portfolio Standard (RPS), which requires at least 33 percent of its energy portfolio to come from renewable sources by 2020. As of 2017, nearly 45 percent of SDG&E’s generating capacity is from renewable energy sources, surpassing the original RPS goal. SB 350 (Chapter 547, Statutes of 2015) further increased the RPS to 50 percent by 2030 and included interim targets of 40 percent by 2024 and 45 percent by 2027. Eligible renewable resources are defined in the RPS to include biodiesel; biomass; hydroelectric and small hydro (30 Mega Watts [MW] or less); aqueduct hydro power plants; digester gas; fuel cells; geothermal; landfill gas; municipal solid waste; ocean thermal, ocean wave, and tidal current technologies; renewable derived biogas; multi-fuel

facilities using renewable fuels; solar photovoltaic (PV); solar thermal electric; wind; and other renewables that may be defined later. SB 100 (Chapter 312, Statutes of 2018) further increases the RPS to 50 percent by December 31, 2026 and to achieve 60 percent by December 31, 2030. SB 100 also states that eligible renewable energy sources and zero-carbon resources supply 100 percent of retail sales of electricity and 100 percent of electricity procured to serve state agencies by December 31, 2045.

3.2.2 Regulatory Setting

3.2.2.1 Federal

Energy Independence and Security Act

Signed on December 19, 2007, the Energy Independence and Security Act (EISA) of 2007 aims to increase U.S. energy independence and security, develop renewable energy production, protect consumers, increase the efficiency of products, buildings, and vehicles, promote research on and deploy greenhouse gas capture and storage options, and improve the energy performance of the Federal Government. The three key provisions enacted are the Corporate Average Fuel Economy (CAFE) Standards, the Renewable Fuel Standard, and the appliance/lighting efficiency standards (USEPA 2007).

3.2.2.2 State

State of California Integrated Energy Policy

In 2002, the Legislature passed Senate Bill 1389, which required the California Energy Commission (CEC) to develop an integrated energy plan every two years for electricity, natural gas, and transportation fuels, for the California Energy Policy Report. The plan calls for the state to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators in implementing incentive programs for Zero Emission Vehicles and their infrastructure needs, and encouragement of urban designs that reduce vehicle miles traveled and accommodate pedestrian and bicycle access.

The CEC has adopted the 2015 Integrated Energy Policy Report, which assesses major energy trends and issues facing the state's electricity, natural gas, and transportation fuel sectors and provides policy recommendations to conserve resources, protect the environment, ensure reliable, secure, and diverse energy supplies, enhance the state's economy, and protect public health and safety. The 2015 Integrated Energy Policy Report covers a broad range of topics, including

energy efficiency, building energy efficiency standards, achieving 50 percent renewables by 2030, and the California Energy Demand Forecast.

Title 24, Building Standards Code and California Green Building Standards (CALGreen) Code

The CEC first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations (CCR), Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the State. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods. The California Building Standards Commission (CBSC) adopted Part 11 of the Title 24 Building Energy Efficiency Standards, referred to as the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to “improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality.” The CALGreen Code establishes mandatory measures for new residential and non-residential buildings, which include requirements for energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. The CALGreen Code was most recently updated in 2016 to include new mandatory measures for residential as well as nonresidential uses. The new measures took effect on January 1, 2017. Buildings constructed under the project would be required to comply with the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance.

Senate Bill 375

SB 375 was signed into law in 2008 and is intended to provide a means for achieving AB 32 Greenhouse Gas Emissions target reduction goals from cars and light trucks through long-range regional growth strategies and transportation plans. SB 375 is directed toward California’s 18 Metropolitan Planning Organizations (MPOs). The San Diego Association of Governments (SANDAG) is San Diego County’s MPO. Under SB 375, each MPO is required to develop a “Sustainable Communities Strategy (SCS),” a newly required element of the Regional Transportation Plan (RTP). SB 375 does not take over local planning functions, and a SCS does not in any way supersede a General Plan, specific plan, or local zoning ordinance. Additionally, SB 375 does not require any consistency between the SCS and these planning and development regulatory documents. However, the MPOs are required to develop the SCS through integrated land use and transportation planning and demonstrate an ability to attain the proposed reduction targets by 2020 and 2035. See below the

discussion of SANDAG’s San Diego Forward: The Regional Plan, which contains the SCS and RTP.

Executive Order B-55-18

On September 10, 2018, the governor issued Executive Order B-55-18, which established a new statewide goal of achieving carbon neutrality by 2045 and maintaining net negative emissions thereafter. This goal is in addition to the existing statewide GHG reduction targets established by SB 375, SB 32, SB 1383, and SB 100.

3.2.2.3 Regional

San Diego Association of Governments San Diego Forward: The Regional Plan

On October 9, 2015, the SANDAG Board of Directors adopted San Diego Forward: The Regional Plan. This plan combines the Regional Comprehensive Plan from 2004 with the 2050 RTP/SCS, which was adopted in 2012. The Regional Plan identifies the five following strategies to move the San Diego region toward sustainability:

- Focus housing and job growth in urbanized areas where there is existing and planned transportation infrastructure, including transit,
- Protect the environmental and help ensure the success of smart growth land use policies by preserving sensitive habitat, open space, cultural resources, and farmland,
- Invest in a transportation network that gives people transportation choices and reduces greenhouse gas emissions,
- Address the housing needs of all economic segments of the population, and
- Implement the Regional Plan through incentives and collaboration.

SDG&E Individual Integrated Resource Plan

The Integrated Resource Plan (IIRP) process is the statewide approach to electric resource planning established by SB 350 intended to achieve California’s GHG emissions reduction goals for the electric sector through and beyond 2030. In addition to addressing SDG&E’s position relative to the GHG target, SDG&E’s IIRP provides data and analysis describing its Disadvantaged Communities (DACs), including a comprehensive description of its current activities serving DAC customers, and a discussion on early prioritization of emissions in DACs. SDG&E current RPS position has around 45 percent from renewable energy and no coal. SDG&E identifies a need for additional GHG emission reduction activities to be conducted in the outer years of the planning horizon (2026–2030). In the forecast to 2030, the SDG&E Conforming Portfolio demonstrates that

SDG&E is providing energy to the system consistent with its customers' demand (SDG&E 2018.)

Sempra Energy 2017 Corporate Sustainability Report

Sempra Energy's annual corporate sustainability report includes year-over-year performance in GHG emissions, environmental compliance and water use. Sempra has made progress in reducing GHG emissions and increasing the amount of low-carbon energy in their power generation portfolio (Sempra Energy 2017):

- By 2021, Sempra Energy intends to achieve a power-generation emissions rate of 35 percent below our 2010 baseline,
- By 2022, their power generation portfolio is projected to be 69 percent emissions-free,
- Approximately 45 percent of the electricity SDG&E delivered to its customers in 2017 was from renewable energy sources – the utility is on track to meet the California target of 50 percent-renewable by 2030, and
- Only 1 percent of their water was withdrawn from freshwater sources; 7 percent was withdrawn from recycled/reclaimed sources; and 92 percent was withdrawn from seawater sources.

3.2.2.4 Local

City of San Diego Climate Action Plan

The City adopted its Climate Action Plan (CAP) in December 2015. With implementation of the CAP the City seeks to reduce emissions 15 percent below baseline emissions by 2020, 40 percent below by 2030, and 50 percent below by 2035. The City has identified the following five strategies to reduce their GHG emissions and meet their 2020, 2030, and 2035 targets:

1. Energy- and water-efficient buildings
2. Clean and renewable energy
3. Bicycling, walking, transit, and land use
4. Zero waste and waste management
5. Climate resiliency

These strategies are integral to reaching the City's target emission reductions and are implemented via the CAP Consistency Checklist. The checklist evaluates a project's consistency with the strategies and compares against three criteria:

1. Project's consistency with existing General Plan

2. Assessment of project's design features for compliance with CAP strategies
3. If a project is inconsistent with land use or zoning, then is the project in a transit priority area that allows for more intensive development than assumed under the CAP

The strategies and checklist developed under the CAP would encourage not only emissions reductions, but increases in building energy and transportation efficiency improvements.

3.2.4 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant energy impact would occur if the project would:

Issue 1: Result in the use of excessive amounts of fuel or energy (e.g. natural gas) or

Issue 2: Result in the use of excessive amounts of power.

3.2.3.1 Energy Resources

Issue 1: Would the proposed project result in the use of excessive amounts of fuel or energy (e.g. natural gas)?

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

Construction

The proposed project includes an amendment to the Clairemont Mesa Community Plan (CMCP) and a rezone that would allow for a future residential development with a maximum of 404 units. During construction, (including both site demolition and preparation activities associated with the proposed project and anticipated construction of the future development) energy would be consumed predominantly in the form of electricity for water conveyance for dust control, as well as minor consumption from other onsite construction activities. Natural gas would not be consumed in any appreciable amount. Project construction would also consume energy in the form of petroleum-based fuels associated with the use of off-road construction vehicles and equipment on the project site, construction workers travel to and from the project site, and delivery and haul truck trips (e.g., hauling of demolition material to offsite reuse and disposal facilities). Site preparation and demolition of the existing site and construction of the future development were conservatively considered as a

combined construction action with no break in schedule between demolition and redevelopment. If the site redevelopment does not occur immediately following the demolition, construction impacts would be lower than those analyzed here due to the use of a more energy-efficient and cleaner burning construction vehicle fleet mix, pursuant to State regulations that require vehicle fleet operators to phase-in less polluting heavy-duty equipment. As a result, should project construction of the future development commence at a later date than analyzed in this EIR, energy impacts would be lower than the impacts disclosed herein.

Table 3.2-2 provides a summary of the annual average electricity, natural gas, gasoline fuel, and diesel fuel estimated to be consumed during both phases of construction for the proposed project. Each of these energy types is discussed and analyzed in greater detail in the sections below.

**Table 3.2-2
Construction Average Annual Energy Use**

Fuel Type	Quantity
Gasoline	gallons
On-Road Construction Equipment	13,491
Off-Road Construction Equipment	0
Total Gasoline	13,491
Annual County Gasoline Usage	1,387,000,000
% of County	0.0010%
Diesel	gallons
On-Road Construction Equipment	15,470
Off-Road Construction Equipment	22,497
Total Diesel	37,967
Annual County Diesel Usage	214,580,000
% of County	0.018%
Electricity	GWh
Water Conveyance for Dust Control	0.069
SDG&E Annual Usage (2018)	18,767
% of SDG&E	0.0004%
Project Length	1.75 years
SOURCE: ESA 2019 (See Appendix E)	
Refer to Appendix E for detailed calculations	

Natural Gas

As stated above, construction activities associated with the County's site preparation and demolition activities and the future construction of the residential development project would not consume appreciable amounts of natural gas during construction because a very limited amount of the equipment would rely

on natural gas for fuel. Therefore, impacts would not result in the use of excessive amounts of fuel or energy, resulting in a less than significant impact.

Transportation Energy

Table 3.2-2 above reports the amount of petroleum-based transportation energy that could potentially be consumed during construction associated with site demolition and preparation activities and the future construction of the residential development project based on the conservative set of assumptions provided in Appendix E of this EIR. Construction on- and off-road vehicles are anticipated to consume approximately 13,491 gallons of gasoline and 37,967 gallons of diesel annually. For comparison purposes only, and not for the purpose of determining significance, the fuel usage during project construction would represent approximately 0.001 percent of the 2018 annual on-road gasoline-related energy consumption and 0.04 percent of the 2018 annual diesel fuel-related energy consumption in San Diego County, as detailed in Appendix E of this EIR.

Transportation fuels (gasoline and diesel) are produced from crude oil, which can be domestic or imported from various regions around the world. Based on current proven reserves, crude oil production would be sufficient to meet over 50 years of worldwide consumption (BP Global 2018). The proposed project would be required to comply with Corporate Average Fuel Economy (CAFE) standards, which would result in more efficient use of transportation fuels (lower consumption). Project-related vehicle trips would also comply with Pavley and Low Carbon Fuel Standards (LCFS), which are designed to reduce vehicle GHG emissions, but would also result in fuel savings above and beyond compliance with CAFE standards.

Construction vehicles would utilize fuel-efficient equipment consistent with state and federal regulations, such as fuel efficiency regulations in accordance with the CARB Pavley Phase II standards, the anti-idling regulation in accordance with Section 2485 in Title 13 of the CCR, and fuel requirements for stationary equipment in accordance with Section 93115 (concerning Airborne Toxic Control Measures) in Title 17 of the CCR, and would comply with State measures to reduce the inefficient, wasteful, and unnecessary consumption of energy, such as petroleum-based transportation fuels. While these regulations are intended to reduce construction emissions, compliance with the anti-idling and emissions regulations discussed above would also result in fuel savings from the use of more fuel-efficient engines.

Based on the analysis above, construction would utilize energy only for necessary on-site activities and to transport construction materials and demolition debris to and from the project site. As discussed above, idling restrictions and the use of cleaner, energy-efficient equipment would result in less fuel combustion and energy consumption and thus minimize the proposed

project's construction-related energy use. Therefore, construction associated with both site demolition and preparation activities and with the future development would not result in the use of excessive amounts of fuel or energy.

Operation

During operation of the anticipated future residential development, energy would be consumed for multiple purposes, including, but not limited to, heating, ventilation, and air conditioning (HVAC), lighting, water usage, solid waste disposal, and vehicle trips. The future development project would be built as a Leadership in Energy and Environmental Design (LEED) Building Design Silver or equivalent.

As shown in **Table 3.2-3**, the proposed project's annual energy demand would be approximately 2.48 GWh of electricity, 6,310 MMBtu of natural gas, 187,528 gallons of gasoline, and 30,615 gallons of diesel fuel.

**Table 3.2-3
Project Operational Energy Usage and Regional Energy Supply**

Source	Electricity per Year	Natural Gas per Year	Gasoline Fuel per Year (gallons) ^c	Diesel Fuel per Year (gallons) ^c
SDG&E	(GWh) ^a	(MMBtu) ^b	—	—
San Diego County (Transportation Sector) (2017) ^c	18,767	48,249,720	1,387,000,000	214,580,000
Building Energy ^d	2.48	6,310	—	—

Refer to Appendix E for detailed calculations

The proposed project would comply with the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance to minimize energy demand. As such, the proposed project would minimize its energy demand in accordance with the regulations.

Natural Gas

The proposed project would increase the demand for natural gas resources related to heating systems, water systems, and compressed natural gas (CNG) vehicles. The project's estimated operational natural gas demand is provided in Table 3.2-3; the proposed project is projected to generate an annual demand for natural gas totaling approximately 6,310 MMBtu. As would be the case with electricity, the proposed project would comply with the applicable provisions of Title 24 and the CALGreen Code in effect at the time of building permit issuance to minimize natural gas demand. As such, the proposed project would minimize its energy demand in accordance with the regulations. Therefore, with the incorporation of these features, operation of the proposed project would not result in the use of excessive amounts of fuel or energy.

Transportation Fuel

The proposed project would increase the demand for fuel resources. The project's estimated operational gasoline and diesel fuel use is provided in Table 3.2-3; the proposed project is projected to generate an annual demand for gasoline totaling approximately 187,528 gallons per year and generate annual demand for diesel totaling approximately 30,615 gallons. The fuel consumption generated by the project represents 0.014 percent of the County's total gasoline use and 0.014 percent of the County's diesel use in 2018. The project is located in a planned transit priority area (TPA) with high frequency transit services immediately adjacent to the site on Genesee Avenue. Transit includes Bus Route #41 and Bus Route #27 which are both within 175 feet of the project site. The project's location near public transit would help reduce vehicle trips to and from the site and reduce the amount of fossil fuel used by the project. In addition, the project is walking distance from commercial centers offering retail, restaurants, and grocery stores that would limit the amount of fossil fuel used by residents and encourage pedestrian activity. Therefore, the project's location near public transit and commercial areas would minimize fossil fuel consumption and not result in the use of excessive amounts of fuel.

3.2.3.2 Power

Issue 2: Result in the use of excessive amounts of power

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

Construction

During construction of both site demolition activities and the future residential development allowed under the proposed project, electricity would be supplied by SDG&E and would be obtained from the existing electrical lines that connect to the project site. As shown in Table 3.2-2, annual average construction electricity usage would be approximately 0.069 GWh. Although there is a minor temporary increase in electricity consumption during construction, the electrical consumption would be within the supply and infrastructure capabilities of SDG&E (18,767 GWh net energy for 2018), representing less than 0.001 percent of SDG&E's 2018 supply (CEC 2018d). The electricity demand at any given time would vary throughout the construction period based on the construction activities being performed, and would cease upon completion of construction. Electricity use from construction would be short-term, limited to working hours, used for necessary construction-related activities, and represent a small fraction of the proposed project's net annual operational electricity. Therefore, impacts from construction-related electrical demand would be less than significant and would not result in the use of excessive amounts of power.

Operation

As shown in Table 3.2-3, operation of the future residential development would result in a projected consumption of electricity totaling approximately 2.48 GWh per year and represent 0.013 percent of SDG&E's total sales in 2018. The project would increase demand for electricity including what is needed to support building operations and would be subject to regulations under the CALGreen Code. The CALGreen Code establishes mandatory standards that require new residential and non-residential uses to reduce electricity, water, and waste to a certain percentage beyond an established baseline level. For example, the project would be required to reduce indoor water use by 20 percent below baseline levels under CALGreen code. The project's commitment to LEED Silver or equivalent design would also increase the overall energy efficiency of the building and ensure efficient use of energy. Therefore, compliance with CALGreen code and commitment to LEED Silver or equivalent would ensure the project would not result in the use of excessive amounts of power.

3.2.4 Cumulative Impact Analysis

Natural Gas

The geographic context for the cumulative analysis of natural gas is the SDG&E service area. Growth within this geography is anticipated to increase the demand for natural gas and the need for infrastructure, such as new or expanded facilities.

Implementation of the project and related cumulative projects in the SDG&E service area is expected to increase natural gas consumption and the need for natural gas supplies. According to SDG&E data, natural gas sales have been relatively stable over the past five years with a slight increase from 45,099,250 MMBTU in 2014 to 48,249,720 MMBTU in 2018. Projected throughput in 2022 is approximately 53,200,000 MBTU. Based on the project's estimated natural gas consumption as shown in Table 3.2-3, the project would account for less than approximately 0.012 percent of SDG&E's total electrical energy usage for the project's buildout year (i.e., 2020).

Although future development projects would result in irreversible use of natural gas resources that could limit future availability, the use of such resources would be on a relatively small scale and would be consistent with regional and local growth expectations for the SDG&E service area. Further, like the project, other future development projects would be expected to incorporate energy conservation features, comply with applicable regulations including CALGreen and State energy standards in Title 24. Therefore, the project would not have a cumulatively considerable impact related to natural gas consumption, and impacts would be less than significant.

Transportation Fuel

Buildout of the project and related projects in the region would be expected to increase overall vehicle miles travelled (VMT); however, the siting of development near transit priority areas consistent with 2016 RTP/SCS goals would result in reduced VMT per capita and the effect on transportation fuel demand would be minimized by future improvements to vehicle fuel economy pursuant to Federal and State regulations. By 2025, vehicles are required to achieve 54.5 mpg (based on USEPA measurements), which is a 54 percent increase from the 35.5 mpg standard in the 2012-2016 standards. The project is located in a planned TPA with high frequency transit services immediately adjacent to the site on Genesee Avenue. The project's location near public transit would help reduce vehicle trips to and from the site and reduce the amount of fossil fuel used by the project. Siting land use development projects near transit facilities is consistent with the State's overall goals to reduce VMT pursuant to SB 375, and as outlined in the 2016 RTP/SCS for the region. Related projects

would need to demonstrate consistency with these goals and incorporate project design features or mitigation measures as required under CEQA that would also ensure related projects contribute to transportation energy efficiency.

Furthermore, according to the U.S. Energy Information Administration's International Energy Outlook 2017, the global supply of crude oil, other liquid hydrocarbons, and biofuels is expected to be adequate to meet the world's demand for liquid fuels through 2040 (USEIA 2017). The project's location near public transit would help reduce vehicle trips to and from the site and reduce the amount of fossil fuel used by the project. Siting land use development projects near transit facilities is consistent with the State's overall goals to reduce VMT pursuant to SB 375, and as outlined in the 2016 RTP/SCS for the region.

Cumulative projects would need to demonstrate consistency with these goals and incorporate project design features or mitigation measures as required under CEQA that would also ensure related projects contribute to transportation energy efficiency. Furthermore, according to the U.S. Energy Information Administration's International Energy Outlook 2017, the global supply of crude oil, other liquid hydrocarbons, and biofuels is expected to be adequate to meet the world's demand for liquid fuels through 2040 (USEIA 2017). Therefore, as the project would be located in a TPA near public transit and commercial/retail areas and incorporate a TDM program consistent with State goals for reducing VMT, the project would not have a cumulatively considerable impact related to transportation energy, and impacts would be less than significant.

Electricity

The geographic context for the cumulative analysis of electricity is SDG&E's service area. Growth within this area is anticipated to increase the demand for electricity and the need for infrastructure, such as new or expanded facilities.

Buildout of the proposed project, the related projects, and additional growth forecast to occur in the city would increase electricity consumption during project construction and operation, and may cumulatively increase the need for energy supplies. SDG&E forecasts that its electricity demand in 2022 would be approximately 19,500 GWh (CEC 2018d). As shown in Table 3.2-3, the proposed project's estimated net new electrical consumption would account for up to approximately 0.013 percent of SDG&E's projected electricity sales for 2018 and 0.013 percent of SDG&E's projected electricity sales for 2022.

Future development would result in the irreversible use of electricity resources that could limit future energy availability. However, the utility provider for the proposed project and related projects have determined that the use of such resources would be minor compared to the existing supply and infrastructure within the SDG&E service area and would be consistent with growth expectations for SDG&E's service area.

Furthermore, like the proposed project, other future development projects would be expected to incorporate energy conservation features, comply with applicable regulations including CALGreen and State energy standards under Title 24, and incorporate mitigation measures, as necessary. Furthermore, the proposed project would commit to LEED Silver or equivalent that would further reduce electricity consumption. As discussed above and based on evidence from SDG&E, the project would not have a cumulatively considerable impact on existing energy resources either individually or incrementally when considered with the anticipated growth in the service areas. Accordingly, the cumulative impacts related to electricity consumption would be considered less than significant.

3.2.6 Significance of Impacts Prior to Mitigation

Impacts related to energy would be less than significant.

3.2.7 Mitigation

No mitigation measures are required.

3.2.8 Conclusion

The proposed project would result in less than significant impacts related to energy use.

This page intentionally left blank

3.3 Greenhouse Gas Emissions

This section analyzes the potential impacts related to greenhouse gas (GHG) emissions from implementation of the proposed project. Details regarding the greenhouse gas emissions analysis are provided in Appendix F of this EIR.

There were no comments related to greenhouse gas emissions received during the public comment period for the Notice of Preparation (NOP). The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.3.1 Existing Conditions

3.3.1.1 *Existing Setting*

Global climate change refers to changes in average climatic conditions on Earth as a whole, including changes in temperature, wind patterns, precipitation and storms. Historical records indicate that global climate changes have occurred in the past due to natural phenomena; however, data indicates that the current global conditions differ from past climate changes in rate and magnitude. The current changes in global climate have been attributed to anthropogenic (human-caused) activities by the Intergovernmental Panel on Climate Change (IPCC 2014). GHGs trap long-wave radiation or heat in the atmosphere, which heats the surface of the Earth. Without human intervention, the Earth maintains an approximate balance between GHG emissions in the atmosphere and the storage of GHGs in the oceans and terrestrial ecosystems. GHGs are the result of both natural and anthropogenic activities. Forest fires, decomposition, industrial processes, landfills, and consumption of fossil fuels for power generation, transportation, heating, and cooking are the primary sources of GHG emissions.

The Federal Government and State of California recognized that anthropogenic GHG emissions are contributing to changes in the global climate, and that such changes are having and will have adverse effects on the environment, the economy, and public health. While worldwide contributions of GHG emissions are expected to have widespread consequences, it is not possible to link particular changes to the environment of California or elsewhere to GHGs emitted from a particular source or location. In other words, emissions of GHGs have the potential to cause global impacts rather than local impacts. Increased concentrations of GHGs in the Earth's atmosphere have been linked to global climate change and such conditions as rising surface temperatures, melting icebergs and snowpack, rising sea levels, and the increased frequency and magnitude of severe weather conditions (IPCC 2014). Existing climate change models also show that climate warming portends a variety of impacts on agriculture, including loss of microclimates that support specific crops, increased pressure from invasive weeds and diseases, and loss of productivity due to

changes in water reliability and availability (OPR 2018, CNRA 2018). In addition, rising temperatures and shifts in microclimates associated with global climate change are expected to increase the frequency and intensity of wildfires (USGCRP 2018, OPR 2018).

State law defines GHGs to include the following compounds: carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆).¹ The most common GHG that results from human activity is CO₂, which represents 76 percent of total anthropogenic GHG emissions in the atmosphere (as of 2010 data) (IPCC 2014), followed by CH₄ and N₂O. Scientists have established a Global Warming Potential (GWP) to gauge the potency of each GHG's ability to absorb and re-emit long-wave radiation and these GWP ratios are available from IPCC. The GWP of a gas is determined using CO₂ as the reference gas with a GWP of 1 over 100 years. For example, a gas with a GWP of 10 is 10 times more potent than CO₂ over 100 years. The sum of each GHG multiplied by its associated GWP is referred to as carbon dioxide equivalents (CO₂e). The measurement unit CO₂e is used to report the combined potency of GHG emissions.

GHG emission inventories have been calculated using the GWPs from the IPCC's Assessment Reports, the Second Assessment Report (SAR) (IPCC 1995), the Fourth Assessment Report (AR4) (IPCC 2007), the most recent (2013) in its Fifth Assessment Report (AR5) (IPCC 2013). However, the United Nations Framework Convention on Climate Change (UNFCCC) reporting guidelines for national inventories require the use of GWP values from the AR4; therefore, official emission estimates for California and the U.S. are reported using AR4 GWP values, and statewide and national GHG inventories have not yet updated their GWP values to the AR5 values.

By applying the GWP ratios, project-related CO₂e emissions can be tabulated in metric tons per year. Typically, the GWP ratio corresponding to the warming potential of CO₂ over a 100-year period is used as a baseline. Compounds that are regulated as GHGs and their respective GWPs are discussed below and are summarized in Error! Reference source not found..

- **Carbon Dioxide:** CO₂ is the most abundant GHG in the atmosphere and is primarily generated from fossil fuel combustion from stationary and mobile sources. CO₂ is the reference gas (GWP of 1) for determining the GWPs of other GHGs.
- **Methane:** CH₄ is emitted from biogenic sources (i.e., resulting from the activity of living organisms), incomplete combustion in forest fires, landfills,

¹ CEQA Guidelines Section 15364.5; Health and Safety Code, Section 38505(g).

manure management, and leaks in natural gas pipelines. The GWP of CH₄ is 21 (SAR), 25 (AR4), and 28 (AR5).

- **Nitrous Oxide:** N₂O produced by human-related sources including agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuel, adipic acid production, and nitric acid production. The GWP of N₂O is 310 (SAR), 298 (AR4), and 265 (AR5).
- **Hydrofluorocarbons:** HFCs are fluorinated compounds consisting of hydrogen, carbon, and fluorine, and are typically used as refrigerants in both stationary refrigeration and mobile air conditioning systems. The GWPs of HFCs ranges from 140 for HFC-152a to 11,700 for HFC-23 (SAR), 124 for HFC-152a to 14,800 for HFC-23 (AR4), and 138 for HFC-152a to 12,400 for HFC-23 (AR5).
- **Perfluorocarbons:** PFCs are fluorinated compounds consisting of carbon and fluorine, and are primarily created as a byproduct of aluminum production and semiconductor manufacturing. The GWPs of PFCs range from 6,500 to 9,200 (SAR), 7,390 to 17,700 (AR4), and 6,630 to 17,400 (AR5).
- **Sulfur Hexafluoride:** SF₆ is a fluorinated compound consisting of sulfur and fluoride, and is a colorless, odorless, nontoxic, nonflammable gas, most commonly used as an electrical insulator in high voltage equipment that transmits and distributes electricity. SF₆ has a GWP of 23,900 (SAR), 22,800 (AR4), and 23,500 (AR5).

**Table 3.3-1
Regulated Greenhouse Gas's Reported GWP Values**

Regulated GHG Compound	IPCC SAR GWP	IPCC AR4 GWP	IPCC AR5GWP
Carbon Dioxide (CO ₂)	1	1	1
Methane (CH ₄)	21	25	28
Nitrous Oxide (N ₂ O)	310	298	265
Hydrofluorocarbons (HFCs)	140 to 11,700	124 to 14,800	138 to 12,400
Perfluorocarbons (PFCs)	6,500 to 9,200	7,390 to 17,700	6,630 to 17,400
Sulfur Hexafluoride (SF ₆)	23,900	22,800	23,500

SOURCE: IPCC 2014.

CARB compiles the California Greenhouse Gas Emission Inventory, the most recent inventory is the 2019 edition, which reports the State's GHG emissions inventory for calendar year 2017 of 424.1 million metric tons of CO₂e (MMTCO₂e) including emissions resulting from imported electrical power (CARB 2019), which is 5 MMTCO₂e lower than 2016 levels and 7 MMTCO₂e below the 2020 GHG

Limit of 431 MMTCO₂e. According to CARB, California is on track to meet the 2020 GHG reduction target of AB 32), as demonstrated by the declining trend coupled with implementation of the state’s GHG reduction programs (such as the Renewables Portfolio Standard (RPS), Low Carbon Fuel Standard (LCFS), vehicle efficiency standards, and declining caps under the Cap and Trade Program) (CEC 2006a). Error! Reference source not found.2 identifies and quantifies statewide anthropogenic GHG emissions and sinks (e.g., carbon sequestration due to forest growth) in 1990 and 2016. As shown in Table 3.3-2, the transportation sector is the largest contributor to statewide GHG emissions at 39 percent in 2016.

**Table 3.3-2
State of California Greenhouse Gas Emissions**

Category	Total 1990 Emissions (MMTCO ₂ e)	Percent of Total 1990 Emissions	Total Emissions (MMTCO ₂ e)	Percent of Total 2016 Emissions
Transportation	150.7	35%	169.86	40%
Electric Power	110.6	26%	62.39	14%
Commercial	14.4	3%	13.02	3%
Residential	29.7	7%	26.00	6%
Industrial	103.0	24%	89.40	21%
Recycling and Waste ^a	–	–	8.89	2%
High GWP/Non-Specified ^b	1.3	<1%	19.99	5%
Agriculture/Forestry	23.6	6%	32.42	8%
Forestry Sinks	-6.7	–	– ^c	–
Net Total (IPCC SAR)	426.6	100%	–	–
Net Total (IPCC AR4)^d	431	100%	424.1	100%

^a Included in other categories for the 1990 emissions inventory.

^b High GWP gases are not specifically called out in the 1990 emissions inventory.

^c Forestry sinks was not calculated for 2017 pending a revised methodology under development.

^d CARB revised the State’s 1990 level GHG emissions using GWPs from IPCC’s AR4.

SOURCE: (CARB 2007; CARB 2019).

3.3.1.2 Effects of Global Climate Change

The scientific community’s understanding of the fundamental processes responsible for global climate change has improved over the past decade, and its predictive capabilities are advancing. However, there remain significant scientific uncertainties in, for example, predictions of local effects of climate change, occurrence, frequency, and magnitude of extreme weather events, effects of aerosols, changes in clouds, shifts in the intensity and distribution of precipitation, and changes in oceanic circulation. Due to the complexity of the

Earth's climate system and inability to accurately model it, the uncertainty surrounding climate change may never be completely eliminated. Nonetheless, the IPCC's AR5 states that, "it is extremely likely that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in greenhouse gas concentrations and other anthropogenic forc[es] [sic] together" (IPCC 2013). A report from the National Academy of Sciences concluded that 97 to 98 percent of the climate researchers most actively publishing in the field support the tenets of the IPCC in that climate change is very likely caused by human (i.e., anthropogenic) activity (Anderegg et al. 2010) According to CARB, the potential impacts in California due to global climate change may include: loss in snow pack; sea level rise; more extreme heat days per year; more high ozone days; more large forest fires; more drought years; increased erosion of California's coastlines and sea water intrusion into the Sacramento and San Joaquin Deltas and associated levee systems; and increased pest infestation (USGCRP 2018).

3.3.2 Regulatory Setting

3.3.2.1 Federal

Clean Air Act

In *Massachusetts v. Environmental Protection Agency* (2007) 549 U.S. 497, the U.S. Supreme Court held in 2007 that USEPA has statutory authority under Section 202 of the federal Clean Air Act to regulate GHGs. The court did not hold that USEPA was required to regulate GHG emissions; however, it indicated that USEPA must decide whether GHGs cause or contribute to air pollution that is reasonably anticipated to endanger public health or welfare. In 2009, the USEPA Administrator signed two distinct findings regarding GHGs under Section 202(a) of the CAA. USEPA adopted a Final Endangerment Finding for the six defined GHGs (CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆) on December 7, 2009. The Endangerment Finding is required before USEPA can regulate GHG emissions under Section 202(a)(1) of the CAA consistently with the United States Supreme Court decision. USEPA also adopted a Cause or Contribute Finding in which the USEPA Administrator found that GHG emissions from new motor vehicle and motor vehicle engines are contributing to air pollution, which is endangering public health and welfare. These findings do not, by themselves, impose any requirements on industry or other entities. However, these actions were a prerequisite for implementing GHG emissions standards for vehicles.

Light Duty Vehicle GHG and Fuel Efficiency Standards

In 2012, USEPA and USDOT adopted standards for model year 2017 through 2025 for passenger cars and light-duty trucks. By 2020, vehicles are required to achieve a combined standard of 41.7 mpg and 213 grams of CO₂ per mile. By

2025, vehicles are required to achieve 54.5 mpg (if GHG reductions are achieved exclusively through fuel economy improvements) and 163 grams of CO₂ per mile. According to USEPA, a model year 2025 vehicle would emit one-half of the GHG emissions from a model year 2010 vehicle. In 2017, USEPA recommended no change to the GHG standards for light-duty vehicles for model years 2022-2025. In 2018, the USEPA Administrator signed the Mid-term Evaluation Final Determination that finds that the model year 2022-2025 GHG standards are not appropriate in light of the record before USEPA and, therefore, should be revised. While not a final USEPA action, the Mid-term Evaluation Final Determination initiates a rulemaking process whose outcome will be the final agency action, however until that rulemaking has been completed, the current standards remain in effect (USEPA 2018).

Energy Independence and Security Act

The Energy Independence and Security Act of 2007 (EISA) facilitates the reduction of national GHG emissions by requiring the following:

- Increasing the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard (RFS) that requires fuel producers to use at least 36 billion gallons of biofuel in 2022;
- Prescribing or revising standards affecting regional efficiency for heating and cooling products, procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances;
- Requiring approximately 25 percent greater efficiency for light bulbs by phasing out incandescent light bulbs between 2012 and 2014; requiring approximately 200 percent greater efficiency for light bulbs, or similar energy savings, by 2020; and
- While superseded by USEPA and NHTSA actions described above, (i) establishing miles per gallon targets for cars and light trucks and (ii) directing NHTSA to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for trucks.

Additional provisions of EISA address energy savings in government and public institutions, promote research for alternative energy, additional research in carbon capture, international energy programs, and the creation of green jobs.²

² A green job, as defined by the United States Department of Labor, is a job in business that produces goods or provides services that benefit the environment or conserve natural resources.

Voluntary Programs

USEPA is responsible for implementing federal policy to address GHGs. The federal government administers a wide array of public-private partnerships to reduce the GHG intensity generated in the U.S. These programs focus on energy efficiency, renewable energy, methane and other non-CO₂ gases, agricultural practices, and implementation of technologies to achieve GHG reductions. USEPA implements numerous voluntary programs that contribute to the reduction of GHG emissions. These programs (e.g., the ENERGY STAR labeling system for energy-efficient products) play a significant role in encouraging voluntary reductions from large corporations, consumers, industrial and commercial buildings, and many major industrial sectors.

3.3.2.2 State

California Air Resources Board

CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, CARB conducts research, sets California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other toxic air contaminants (Title 13 California Code of Regulations [CCR], Section 2485). ATCM applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. ATCM generally does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given location with certain exemptions for equipment in which idling is a necessary function such as concrete trucks. While ATCM primarily targets diesel particulate matter emissions, it has co-benefits of minimizing GHG emissions from unnecessary truck idling.

In 2007, CARB adopted emission standards for off-road diesel construction equipment of greater than 25 horsepower such as bulldozers, loaders, backhoes and forklifts, as well as many other self-propelled off-road diesel vehicles. This regulation aims to reduce emissions by installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission controlled models. Additionally, in 2008, CARB approved the

Truck and Bus Regulation to reduce particulate matter and nitrogen oxide emissions from existing diesel vehicles operating in California (13 CCR, Section 2025, subsection (h)). In 2014, amendments to the Truck and Bus Regulation were approved by CARB to help ensure that the air quality benefits originally envisioned by the regulation will be achieved, by providing some additional compliance flexibility and options to vehicle owners (CARB 2014). Refer to Section 2.2, Air Quality, Regulatory Setting) of this EIR for additional details regarding these regulations. While these regulations primarily target reductions in criteria air pollutant emission, they have co-benefits of minimizing GHG emissions due to improved engine efficiencies.

California Greenhouse Gas Reduction Targets

Executive Order S-3-05

In 2005, Executive Order S-3-05 proclaimed that California is vulnerable to the impacts of climate change. Executive Order S-3-05 declares that increased temperatures could reduce snowpack in the Sierra Nevada Mountains; could further exacerbate California's air quality problems; and could potentially cause a rise in sea levels. In an effort to avoid or reduce the impacts of climate change, Executive Order S-3-05 calls for a reduction in GHG emissions to the year 2000 level by 2010, to year 1990 levels by 2020, and to 80 percent below 1990 levels by 2050. Executive Orders are binding on state agencies only.

Executive Order B-30-15

In 2015, Executive Order B-30-15 established a new interim Statewide reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030, ordered all State agencies with jurisdiction over sources of GHG emissions to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 reduction targets, and directed CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of carbon dioxide equivalent.

Executive Order B-55-18

In 2018, Executive Order B-55-18 establishes an additional Statewide policy to achieve carbon neutrality by 2045 and maintain net negative emissions thereafter. As per Executive Order B-55-18, CARB is directed to work with relevant State agencies to develop a framework for implementation and accounting that tracks progress toward this goal and to ensure future Climate Change Scoping Plans identify and recommend measures to achieve the carbon neutrality goal.

California Global Warming Solutions Act of 2006 - Assembly Bill 32

In 2006, AB 32 (codified in the California Health and Safety Code [HSC], Division 25.5 – California Global Warming Solutions Act of 2006) focuses on reducing GHG emissions in California to 1990 levels by 2020. HSC Division 25.5 defines GHGs as CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆ and represents the first enforceable statewide program to limit emissions of these GHGs from all major industries with penalties for noncompliance. The law further requires that reduction measures be technologically feasible and cost effective. Under HSC Division 25.5, CARB has the primary responsibility for reducing GHG emissions. CARB is required to adopt rules and regulations directing state actions that would achieve GHG emissions reductions equivalent to 1990 statewide levels by 2020.

Senate Bill 32

In 2016, the California State Legislature adopted Senate Bill (SB) 32 and its companion bill AB 197, amended HSC Division 25.5 and established a new climate pollution reduction target of 40 percent below 1990 levels by 2030 and includes provisions to ensure the benefits of state climate policies reach into disadvantaged communities.

2008 Climate Change Scoping Plan

A specific requirement of AB 32 was to prepare a Climate Change Scoping Plan for achieving the maximum technologically feasible and cost-effective GHG emission reduction by 2020 (HSC Section 38561 (h)). CARB developed an AB 32 Scoping Plan that contains strategies to achieve the 2020 emissions cap (CARB 2013). The initial scoping plan was approved in 2008, and contained a mix of recommended strategies that combined direct regulations, market-based approaches, voluntary measures, policies, and other emission reduction programs calculated to meet the 2020 statewide GHG emission limit and initiate the transformations needed to achieve the State's long-range climate objectives (CARB 2013).

2014 Scoping Plan Update

In 2014, the first update to the Scoping Plan built upon the initial Scoping Plan with new strategies and recommendations (CARB 2013). As required by HSC Division 25.5, CARB approved the 1990 GHG emissions inventory, thereby establishing the emissions limit for 2020. CARB also updated the State's projected 2020 emissions estimate to account for the effect of the 2007–2009 economic recession, new estimates for future fuel and energy demand, and the reductions required by regulation that were recently adopted for motor vehicles and renewable energy.

2017 Climate Change Scoping Plan

The 2017 Climate Change Scoping Plan (CARB 2017b) outlines the strategies the State will implement to achieve the 2030 GHG reduction target of 40 percent below 1990 levels by 2030 established by SB 32. The 2017 Scoping Plan is also intended to “substantially advance” toward the EO S-3-05 2050 climate goal to reduce GHG emissions by 80 percent below 1990 levels by 2050.

The 2017 Scoping Plan builds on the Cap-and-Trade Regulation, the LCFS, improved vehicle, truck and freight movement emissions standards, increasing renewable energy, and strategies to reduce methane emissions from agricultural and other wastes by using it to meet our energy needs. The 2017 Scoping Plan also comprehensively addresses GHG emissions from natural and working lands of California, including the agriculture and forestry sectors. The 2017 Scoping Plan considered a number of different alternatives to achieve the 2030 GHG reduction goal. The “Scoping Plan Scenario” was ultimately adopted and relies on the continuation of ongoing and statutorily required programs and continuation of the Cap-and-Trade Program. The Scoping Plan Scenario was modified from the January 2017 Proposed Scoping Plan to reflect AB 398, including removal of the 20 percent GHG reduction measure for refineries (CARB 2017b).

CARB states that the Scoping Plan Scenario “is the best choice to achieve the State’s climate and clean air goals” (CARB 2017b). Under the Scoping Plan Scenario, the majority of the reductions would result from continuation of the Cap-and-Trade regulation. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 50 percent renewable electricity by 2030), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived climate pollutant strategy (e.g., hydrofluorocarbons), and implementing the mobile source strategy and sustainable freight action plan.

Senate Bill 375

In 2008, SB 375 was intended to provide a means for achieving AB 32 Greenhouse Gas Emissions target reduction goals from cars and light trucks through long-range regional growth strategies and transportation plans. SB 375 is directed toward California’s 18 Metropolitan Planning Organizations (MPOs). The San Diego Association of Governments (SANDAG) is San Diego County’s MPO. Under SB 375, each MPO is required to develop a “Sustainable Communities Strategy,” a newly required element of the Regional Transportation Plan (RTP). SB 375 does not take over local planning functions, and a Sustainable Community Strategy does not in any way supersede a General Plan, specific plan, or local zoning ordinance. Additionally, SB 375 does not require any consistency between the Sustainable Communities Strategy and these planning and development regulatory documents. However, the MPOs are required to develop the Sustainable Communities Strategies through integrated

land use and transportation planning and demonstrate an ability to attain the proposed reduction targets by 2020 and 2035.

Title 24, Part 6, California Code of Regulations (2005)

In 2005, California adopted new energy efficiency standards for residential and nonresidential buildings in order to reduce California's energy consumption. This program has been partially responsible for keeping California's per capita energy use approximately flat over the past 30 years.

Title 24, Part 11, California Code of Regulations (2018)

Part 11 of the Title 24 Building Energy Efficiency Standards is referred to as the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality" (California Building Standards Commission 2010). In 2016, the CALGreen Code was updated to include new mandatory measures for residential and nonresidential uses including energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality (California Building Standards Commission 2010). In 2018, the CALGreen code was most recently updated with new measures taking effect in 2020.

SB X1-2, SB 350, and SB 100

In 2011, SB X1-2 increased California's RPS to 33 percent by 2020. SB 350 (Chapter 547, Statutes of 2015) further increased the RPS to 50 percent by 2030. The legislation also included interim targets of 40 percent by 2024 and 45 percent by 2027, and doubled energy efficiency savings in electricity and natural gas final end uses. In 2018, SB 100 (Chapter 312, Statutes of 2018) established that 100 percent of all electricity in California must be obtained from renewable and zero-carbon energy resources by the end of 2045. SB 100 also creates new standards for the RPS, increasing required energy from renewable sources for both investor-owned utilities and publicly-owned utilities from 50 percent to 60 percent by the end of 2030. Incrementally, these energy providers must also have a renewable energy supply of 44 percent by the end of 2024, and 52 percent by the end of 2027. The updated RPS goals are considered achievable, since many California energy providers are already meeting or exceeding the RPS goals established by SB 350.

Assembly Bill 341

In 2011, AB 341 established the policy goal of no less than 75 percent of solid waste generated be source reduced, recycled or composted by the year 2020.

Senate Bill 1383

SB 1383 creates goals for short-lived climate pollutant (SLCP) reductions in various industry sectors. The SLCPs included under SB 1383 – including methane, fluorinated gases, and black carbon – are GHGs that are much more potent than carbon dioxide and can have detrimental effects on human health and climate change. SB 1383 requires CARB to adopt a strategy to reduce methane by 40 percent, hydrofluorocarbon gases by 40 percent, and anthropogenic black carbon by 50 percent below 2013 levels by 2030. The methane emission reduction goals include a 75 percent reduction in the level of statewide disposal of organic waste from 2014 levels by 2025.

3.3.2.3 Regional

San Diego Association of Governments San Diego Forward: Regional Plan

SANDAG is the MPO and regional transportation planning agency for the San Diego Region. SANDAG is the regional authority that creates region-specific documents to provide guidance to local agencies, as SANDAG does not have any land use authority. SANDAG's San Diego Forward: The Regional Plan (Regional Plan) combines two of the region's existing planning documents: the Regional Comprehensive Plan for the San Diego Region (RCP) and the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

In 2004, the RCP laid out key principles for managing the region's growth while preserving natural resources and limiting urban sprawl. The RCP covered eight policy areas, including urban form, transportation, housing, health environment, economic prosperity, public facilities, our borders, and social equity. These policy areas were addressed in the 2050 RTP/SCS and are now fully integrated into the Regional Plan that was adopted by the SANDAG Board of Directors in 2015.

The SCS describes how the region will coordinate its land use development and transportation planning activities to reduce GHG emissions (in part by decreasing vehicular fuel use), and is integrated into the RTP. SANDAG's RTP/SCS identifies significant improvements to the City's and the region's transit systems, allows for more development in areas with better access to transit, and supports efficiency improvements to regional streets and highways.

3.3.2.4 Local

City of San Diego General Plan

The City's General Plan includes several climate change-related policies aimed at reducing GHG emissions from future development and City operations. The Conservation Element policy CE-A.2 aims to "reduce the City's carbon footprint" and to "develop and adopt new or amended regulations, programs, and incentives as appropriate to implement the goals and policies set forth" related to climate change. The Land Use and Community Planning Element, the Mobility Element, the Urban Design Element, and the Public Facilities, Services, and Safety Element also identify GHG reduction and climate change adaptation goals (City of San Diego 2015). These elements contain policy language related to sustainable land use patterns, alternative modes of transportation, energy efficiency, water conservation, waste reduction, and greater landfill efficiency. The overall intent of these policies is to support climate protection actions, while retaining flexibility in the design of implementation measures, which could be influenced by new scientific research, technological advances, environmental conditions, or state and federal legislation.

One specific concept introduced in the City's General Plan is the aforementioned City of Villages strategy, which proposes growth to be directed into pedestrian-friendly mixed-use activity centers linked to an improved regional transit system. The City of Villages strategy shifts the focus of land use policies to encourage infill development and reinvest in existing communities. Locating different land uses types near one another can decrease mobile emissions. Thus, the development of dense urban "villages" would generate less GHG emissions. The City of Villages strategy can be seen as an effort to avoid what is commonly referred to as "urban sprawl".

Cumulative impacts of GHG emissions were qualitatively analyzed and determined to be significant and unavoidable in the PEIR for the City's General Plan. A PEIR Mitigation Framework was included that indicated that "for each future project requiring mitigation (measures that go beyond what is required by existing programs, plans, and regulations), project-specific measures will [need to] be identified with the goal of reducing incremental project-level impacts to less than significant; or the incremental contributions of a project may remain significant and unavoidable where no feasible mitigation exists".

City of San Diego Climate Action Plan

In 2015, the City adopted its Climate Action Plan (CAP) (City of San Diego 2015), which identifies measures to meet GHG emissions reduction targets for 2020 and 2035. The CAP consists of a 2010 inventory of GHG emissions, a business-as-usual (BAU) projection for emissions in 2020 and 2035, state targets, and

emission reductions with implementation of the CAP. The City identifies GHG reduction strategies focusing on energy- and water-efficient buildings; clean and renewable energy; bicycling, walking, transit, and land use; zero waste; and climate resiliency. Accounting for future population and economic growth, the City projects GHG emissions to be approximately 15.9 million metric tons of carbon dioxide equivalent (MMT CO_{2e}) in 2020 and 16.7 MMT CO_{2e} in 2035. To achieve its proportional share of the state reduction targets for 2020 (AB 32) and 2050 (EO S-3-05), the City would need to reduce emissions below the 2010 baseline by 15 percent in 2020 and 50 percent by 2035. To meet these goals, the City must implement strategies that reduce emissions to approximately 11.0 MMT CO_{2e} in 2020 and 6.5 MMT CO_{2e} in 2035. Through implementation of the CAP, the City is projected to reduce emissions even further below targets by 1.2 MMT CO_{2e} by 2020 and 205,462 MT CO_{2e} by 2035.

As a means to implement the CAP, the City created a CAP Consistency Checklist utilized by projects to assure compliance with the measures identified in the CAP.

3.3.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant impact would occur to greenhouse gas emissions if the proposed project would:

Issue 1: Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Issue 2: Conflict with the City's Climate Action Plan or another applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

3.3.3.1 GHG Emissions Generation

Issue 1: Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Impact Analysis

Community Plan Amendment and Rezone

The project includes an amendment to the Clairemont Mesa Community Plan (CMCP) and rezoning of the project site that would allow for a future residential development with a maximum of 404 units. Project construction activities of the future residential development would contribute GHG emissions as a result of off-road diesel equipment exhaust and emissions from employee, material delivery,

and haul truck travel. Primary emissions would occur as CO₂ from gasoline and diesel combustion, with more limited vehicle tailpipe emissions of N₂O and CH₄ as well as other GHG emissions related to vehicle cooling systems.

Construction-related GHG emissions for the anticipated future development were estimated using CalEEMod, version 2016.3.2. for onsite equipment and EMFAC2017 for on-road haul, vendor and worker trips, using the same assumptions used in the air quality emissions analysis (see Section 2.2, Air Quality, of this EIR). Total estimated construction-related GHG emissions are shown in **Table 3.3-3**.

Table 3.3-3
Estimated Total Construction GHG Emissions - Community Plan Amendment and Rezone

Emission Source	Estimated MT CO ₂ e Emissions
Foundations/ Concrete Pour	36
Building Construction	519
Architectural Coating	79
Paving	29
Total Construction Emissions	663 (MT)
Annual Construction (Amortized over 30 years)	22 (MT CO₂e /yr)

CO₂e= carbon dioxide equivalent; MT =metric tons; MT/yr = metric tons per year.
SOURCE: ESA CalEEMod Modeling 2019.

As shown in Table 3.3-3, the total estimated GHG emissions during construction of the future development would be approximately 663 MT of CO₂e, which amortized over a 30-year period would be approximately 22 MT of CO₂e/year, which was added to the project's annual operational emissions in Table 3.3-4.

Operation of the future residential development would contribute GHG emissions as a result of building energy usage (electricity and natural gas), mobile emissions, landscaping, waste, and water. Project operational emissions were estimated using CalEEMod, version 2016.3.2, for onsite sources and EMFAC2017 for mobile sources. Total estimated operational GHG emissions (including amortized construction emissions) are shown in **Table 3.3-4**, totaling 3,146 MT of CO₂e. As discussed in Issue 2, below, the project would meet the requirements for GHG reductions for project development under the City's CAP and would be consistent with the CAP's goals. Therefore, the project would not result in GHG emissions that have a significant impact on the environment.

**Table 3.3-4
Estimated Total Operational GHG Emissions - Site Demolition and Preparation**

Emission Source	Estimated MT CO₂e Emissions
Building Energy	968
Mobile	1,998
Landscaping	5
Waste	23
Water	130
Total Construction (Amortized)	22
Total Operational Emissions	3,146

CO₂e= carbon dioxide equivalent; MT =metric tons; MT/yr = metric tons per year.
SOURCE: ESA CalEEMod Modeling 2019.

Site Demolition and Preparation

Construction-related GHG emissions for the site demolition and preparation portion of the proposed project were estimated using CalEEMod, version 2016.3.2. for onsite equipment and EMFAC2017 for on-road haul, vendor and worker trips, using the same assumptions used in the air quality emissions analysis (see Section 2.2, Air Quality, of this EIR). Total estimated construction-related GHG emissions are shown in **Table 3.3-5**.

**Table 3.3-5
Estimated Total Construction GHG Emissions**

Emission Source	Estimated MT CO₂e Emissions
Demolition	81
Site Preparation	66
Grading	48
Drainage/Utilities/Trenching	34
Total Construction Emissions	229 (MT)
Annual Construction (Amortized over 30 years)	8 (MT CO₂e /yr)

CO₂e= carbon dioxide equivalent; MT =metric tons; MT/yr = metric tons per year.
SOURCE: ESA CalEEMod Modeling, 2019.

As shown in Table 3.3-5, the total estimated GHG emissions during site demolition and preparation of the project would be approximately 229 MT of CO₂e, which amortized over a 30-year period would be approximately 8 MT of

CO₂e/year. As discussed in Issue 2, below, the project would meet the requirements for GHG reductions for project development under the City's CAP and would be consistent with the CAP's goals. Therefore, the project would not result in GHG emissions that have a significant impact on the environment.

3.3.3.2 Greenhouse Gas Reduction Plans

Issue 2: Would the project conflict with the City's Climate Action Plan or another applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impact Analysis

Community Plan Amendment and Rezone and Site Demolition and Preparation

Compliance with a GHG emissions reduction plan renders a less-than-significant impact. The analyses below demonstrate that the project is consistent with the applicable GHG emission reduction plans and policies included within the 2017 Climate Change Scoping Plan and the City's Climate Action Plan.

Consistency with the CARB Scoping Plan

At the State level, Executive Orders S-3-05 and B-30-15 are orders from the State's Executive Branch for the purpose of reducing GHG emissions. Executive Order S-3-05's goal to reduce GHG emissions to 1990 levels by 2020 was adopted by the Legislature as the 2006 Global Warming Solutions Act (AB 32) and codified into law in AB 32. Executive Order B-30-15's goal to reduce GHG emissions to 40 percent below 1990 levels by 2030 was adopted by the Legislature in SB 32 and also codified into law in AB 32.

In support of AB 32, the State has promulgated specific laws and strategies aimed at GHG reductions that are applicable to the project. The primary focus of many of the Statewide and regional plans, policies, and regulations is to address worldwide climate change. Due to the complex physical, chemical, and atmospheric mechanisms involved in global climate change, there is no basis for concluding that the project's increase in annual GHG emissions would cause a measurable change in global GHG emissions necessary to influence global climate change. Newer construction materials and practices, energy efficiency requirements, and newer appliances tend to emit lower levels of air pollutant emissions, including GHGs, as compared to those built years ago; however, the net effect is difficult to quantify. The GHG emissions of the project alone would not likely cause a direct physical change in the environment. According to CAPCOA, "GHG impacts are exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective (CAPCOA,

2008).” It is global GHG emissions in their aggregate that contribute to climate change, not any single source of GHG emissions alone.

There are several GHG reduction plans and programs that will be implemented at state and local levels which will indirectly reduce GHG emissions from the project. These plans, programs and regulations are beyond control of the project and will occur with or without the implementation of the project. These include:

- **California Renewables Portfolio Standard (RPS) program (SB 100):** The project complies with SB100 inasmuch as the project is served by San Diego Gas and Electric (SDG&E), which is which is required to obtain 33 percent renewable power by 2020. Furthermore, per the updated requirements of SB 100, signed by Governor Brown on September 10, 2018, SDG&E would be required to procure eligible renewable electricity for 44 percent of retail sales by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030 and should plan to achieve 100 percent eligible renewable energy resources and zero-carbon resources by December 31, 2045.
- **Assembly Bill 1109:** According to the California Energy Commission, energy savings from AB 1109 are achieved through codes and standards. Energy savings from AB 1109 are calculated as part of codes and standards savings (CEC 2014).
- **SB 1368, CCR Title 20, Cap and Trade Program:** Reduces GHG emissions from major sources (deemed “covered entities”) by setting a firm cap on Statewide GHG emissions and employing market mechanisms to achieve AB 32’s emission-reduction mandate of returning to 1990 levels of emissions by 2020. Under Cap-and-Trade program, an overall limit is established for GHG emissions from capped sectors (e.g., electricity generation) and declines over time, and facilities subject to the cap can trade permits to emit GHGs. The Statewide cap for GHG emissions from the capped sectors commenced in 2013 and declines over time, achieving GHG emission reductions throughout the Program’s duration and on July 17, 2017 the California legislature passed Assembly Bill 398, extending the Cap-and-Trade program through 2030. The project would be consistent with this regulation as the project’s GHG emissions associated with electricity usage are covered by the Cap-and-Trade Program as the Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported.
- **AB 1493 (Pavley Regulations):** Reduces GHG emissions in new passenger vehicles from model year 2012 through 2016 (Phase I) and model years 2017–2025 (Phase II). Also reduces gasoline consumption to a rate of 31 percent of 1990 gasoline consumption (and associated GHG emissions) by 2020. The project would be consistent with this regulation and would not conflict with implementation of the vehicle emissions

standards. GHG emissions related to vehicular travel by the project would benefit from this regulation because vehicle trips associated with the project would be affected by AB 1493. Mobile source emissions generated by the project would be reduced with implementation of AB 1493 consistent with reduction of GHG emissions under AB 32.

- **Low Carbon Fuel Standard (Executive Order S-01-07):** Establishes protocols for measuring life-cycle carbon intensity of transportation fuels and helps to establish use of alternative fuels. This executive order establishes a Statewide goal to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. The project would be consistent with this regulation and would not conflict with implementation of the transportation fuel standards. GHG emissions related to vehicular travel by the project would benefit from this regulation and mobile source emissions generated by the project would be reduced with implementation of LCFS consistent with reduction of GHG emissions under AB 32.
- **Advanced Clean Cars Program:** In 2012, CARB adopted the Advanced Clean Cars program to reduce criteria pollutants and GHG emissions for model year vehicles 2015 through 2025. The Advanced Clean Cars program includes the Low-Emission Vehicle regulations that reduce criteria pollutants and GHG emissions from light- and medium-duty vehicles, and the Zero-Emission Vehicle regulation, which requires manufacturers to produce an increasing number of pure Zero-Emission Vehicles (meaning battery electric and fuel cell electric vehicles), with provisions to also produce plug-in hybrid electric vehicles in the 2018 through 2025 model years. The standards would apply to all vehicles used by residents of the project.
- **SB 375:** SB 375 establishes mechanisms for the development of regional targets for reducing passenger vehicle GHG emissions. Under SB 375, CARB is required, in consultation with the State's Metropolitan Planning Organizations, to set regional GHG reduction targets for the passenger vehicle and light-duty truck sector for 2020 and 2035.
- **Senate Bill X7-7:** The Water Conservation Act of 2009 sets an overall goal of reducing per capita urban water use by 20 percent by December 31, 2020. Each urban retail water supplier shall develop water use targets to meet this goal. This is an implementing measure of the Water Sector of the AB 32 Scoping Plan. Reduction in water consumption directly reduces the energy necessary and the associated emissions to convey, treat, and distribute the water; it also reduces emissions from wastewater treatment. The project would utilize energy efficiency appliances and equipment and would meet the applicable energy standards in the 2019 Title 24 Building Energy Efficiency Standards and CALGreen Code, or applicable version at the time of building permit issuance.

- California Integrated Waste Management Act (IWMA) of 1989 and Assembly Bill (AB) 341:** The IWMA mandated that State agencies develop and implement an integrated waste management plan which outlines the steps to be taken to divert at least 50 percent of their solid waste from disposal facilities. AB 341 directs CalRecycle to develop and adopt regulations for mandatory commercial recycling and sets a Statewide goal for 75 percent disposal reduction by the year 2020. GHG emissions related to solid waste generation from the project would benefit from this regulation as it would decrease the overall amount of solid waste disposed of at landfills. The decrease in solid waste would then in return decrease the amount of methane released from the decomposing solid waste.

Table 3.3-6 contains a list of GHG-reducing strategies applicable to the project. The analysis describes the consistency of the project with these laws and strategies outlined in the State’s Climate Change Scoping Plan to reduce GHG emissions. The Climate Change Scoping Plan outlines a framework that relies on a broad array of GHG reduction actions, which include direct regulations, alternative compliance mechanisms, incentives, voluntary actions, and market-based mechanisms such as the Cap-and-Trade program. As a result, the project would not conflict with applicable Climate Change Scoping Plan strategies and regulations to reduce GHG emissions.

**Table 3.3-6
Consistency with Applicable Climate Change Scoping Plan
Greenhouse Gas Reduction Strategies**

Sector / Source	Category / Description	Consistency Analysis
Energy		
CCR, Title 24, Building Standards Code	Energy Efficiency Standards for Residential and Nonresidential Buildings	Compliant. The project would meet or exceed the applicable requirements of the 2019 Title 24 Building Energy Efficiency Standards and CALGreen Code or applicable version at the time of building permit issuance.
California Green Building Standards Code Requirements	All bathroom exhaust fans shall be ENERGY STAR compliant.	Compliant. The project would utilize energy efficiency appliances and equipment and would meet the applicable energy standards in the 2019 Title 24 Building Energy Efficiency Standards and CALGreen Code, or applicable version at the time of building permit issuance. The 2019 Title 24 Building Code includes installation of ENERGY STAR compliant appliances.

Sector / Source	Category / Description	Consistency Analysis
	HVAC Systems will be designed to meet ASHRAE standards.	Compliant. The project would utilize energy efficiency heating, ventilation, and air conditioning (HVAC) Systems that would meet or exceed the applicable energy standards in ASHRAE 90.1-2013 Appendix G and the 2019 Title 24 Building Energy Efficiency Standards and CALGreen Code, or applicable version of these standards at the time of building permit issuance.
	Refrigerants used in newly installed HVAC systems shall not contain any CFCs.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code for the use of HFCs in HVAC systems.
	Parking spaces shall be designed for carpool or alternative fueled vehicles. Up to eight percent of total parking spaces will be designed for such vehicles.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.
	Long-term and short-term bike parking shall be provided for up to five percent of vehicle trips.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.
	Stormwater Pollution Prevention Plan (SWPPP) required.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.
	Indoor water usage must be reduced by 20% compared to current California Building Code Standards for maximum flow.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.
	All irrigation controllers must be installed with weather sensing or soil moisture sensors.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.
	Wastewater usage shall be reduced by 20 percent compared to current California Building Standards.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.
	Requires a minimum of 50 percent recycle or reuse of nonhazardous construction and demolition debris. Requires documentation of types of waste recycled, diverted or reused.	Compliant. The project would meet this requirement as part of its compliance with the CALGreen Code.

Sector / Source	Category / Description	Consistency Analysis
Water		
CCR, Title 24	Title 24 includes water efficiency requirements for new residential and non-residential uses.	Compliant. The project would utilize energy efficiency appliances and equipment and would meet the applicable energy standards in the 2019 Title 24 Building Energy Efficiency Standards and CALGreen Code, or applicable version at the time of building permit issuance. The 2019 Title 24 Building Code includes installation of ENERGY STAR compliant appliances.
Other Sources		
Climate Action Team (CAT) works to coordinate Statewide efforts to implement global warming emission reduction programs and the State's Climate Adaptation Strategy.	Reduce diesel-fueled commercial motor vehicle idling.	Consistent. The project would be consistent with the CARB Air Toxics Control Measure to limit heavy duty diesel motor vehicle idling to no more than 5 minutes at any given time, most specifically during construction since the underlying Airborne Toxic Control Measure (ATCM) that limits heavy-duty diesel motor vehicle idling (Title 13 California Code of Regulations [CCR], Section 2485) was adopted by CARB in 2004.
	Implement efficient water management practices and incentives, as saving water saves energy and GHG emissions.	Consistent. The project would meet this requirement as part of its compliance with the CALGreen Code.
	Reduce GHG emissions from electricity by reducing energy demand. The California Energy Commission updates appliance energy efficiency standards that apply to electrical devices or equipment sold in California. Recent policies have established specific goals for updating the standards; new standards are currently in development.	Consistent. The project would meet or exceed the energy standards in the Title 24 Building Energy Efficiency Standards, and the CALGreen Code.
	Apply strategies that integrate transportation and land-use decisions, including but not limited to promoting jobs/housing proximity, high-density residential/commercial development along transit corridors, and implementing intelligent transportation systems.	Consistent. The project would incorporate physical and operational project characteristics that would reduce vehicle trips and VMT and encourage alternative modes of transportation. The project would reduce VMT as a result of its urban infill location, with nearby access to public transportation within a quarter-mile of the project Site, and its

Sector / Source	Category / Description	Consistency Analysis
		proximity to other destinations including off-site residential, retail, and entertainment.
	Reduce energy use in private buildings.	Consistent. The project would meet or exceed the energy standards in the Title 24 Building Energy Efficiency Standards, and the CALGreen Code.

SOURCE: ESA, 2019.

As described above in Table 3.3-6, the project is compliant with the applicable laws and regulations that serve to reduce GHG emissions. In addition to the project's consistency with applicable GHG reduction laws and strategies, the project would not conflict with the future anticipated Statewide GHG reductions goals as discussed under Impact 1. CARB has outlined a number of potential strategies for achieving the 2030 reduction target of 40 percent below 1990 levels, as mandated by SB 32. These potential strategies include renewable resources for half of the State's electricity by 2030, increasing the fuel economy of vehicles and the number of zero-emission or hybrid vehicles, reducing the rate of growth in VMT, supporting other alternative transportation options, and use of high-efficiency appliances, water heaters, and HVAC systems (E&E 2015). The project would benefit from Statewide and utility-provider efforts towards increasing the portion of electricity provided from renewable resources. The project would use energy-efficient appliances and equipment (e.g., ENERGY STAR rated), and water efficient fixtures.

Based on the analysis above, the project would be consistent with CARB's Scoping Plans (i.e., 2008 Scoping Plan, 2014 Scoping Plan, and 2017 Scoping Plan) and given the reasonably anticipated decline in project emissions once fully constructed and operational, the project would be consistent with the State's GHG reduction targets for 2030 and 2050. Therefore, impacts are less than significant.

The City adopted its CAP to identify GHG reduction strategies needed to achieve its proportional share of the state reduction targets for 2020 (AB 32) and 2050 (EO S-3-05). The City of San Diego CAP and Checklist were developed consistent with AB 32 (2020 target) and EO S-3-05 (2050 goal). The CAP Checklist was not developed consistent with the target reductions of Senate Bill 32; since it was EO B-30-15 at the time and CARB was in the process of updating its Scoping Plan to provide a framework for achieving the 2030 target.

As detailed in the CAP, the City would need to reduce emissions below the 2010 baseline by 15 percent in 2020 and 50 percent by 2035. Through implementation

of the CAP, the City is projected to reduce emissions below targets by 2020 and 2035. In order to ensure the CAP implementation, the City created a CAP Consistency Checklist to be utilized by projects. Therefore, projects consistent with the CAP would result in a less than significant impact.

The CAP Consistency Checklist was completed for the project (Appendix F). The project would meet the requirements for GHG reductions for project development under the City's CAP, and the future residential development would be required to complete a project-level CAP Consistency Checklist, as required in the CPA (Appendix B). Therefore, the proposed project would be compliant with the City's CAP. Additionally, the project would be consistent with the CARB Climate Change Scoping Plan reduction goals. Thus, the project would not generate GHG emissions that would have a significant impact on the environment, nor would the project conflict with the City's CAP. Impacts would be less than significant.

3.3.4 Significance of Impacts Prior to Mitigation

Impacts related to project GHG emissions would be less than significant.

3.3.5 Mitigation

No mitigation measures are required.

3.3.6 Conclusion

The proposed project would not have any significant impacts related to GHG emissions.

3.4 Land Use and Planning

This section provides an assessment of potential impacts related to land use and planning which could occur from project implementation. This EIR section addresses the consistency of the project with the applicable land use goals, policies and regulations in these land use plans. In accordance with the California Environmental Quality Act (CEQA), the determination of significance regarding any identified inconsistencies is evaluated in terms of their potential to result in significant physical effects on the environment.

Comments related to land use received during the public comment period for the Notice of Preparation (NOP) included concerns that the project would differ from the goals expressed for the community of Clairemont Mesa within the city of San Diego and that the County should consider other land uses for the project site. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to impact land use and planning. The suggestion to consider land uses other than residential is addressed in Chapter 4.0, Alternatives. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.4.1 Existing Conditions

The 4.09-acre project site is located within the Clairemont Mesa community of the city. The project site is currently developed with the former San Diego County Regional Crime Lab (Crime Lab) comprised of two buildings (one to two stories in height totaling approximately 103,500 square feet [SF]) and associated surface parking. The Crime Lab functions were relocated in 2018, with the existing buildings currently vacant except for some minimal storage.

The project site is located within a highly built environment surrounded by a mixture of commercial and residential development and within a designated planned 2035 transit priority area (TPA) (City of San Diego 2019).¹ Land uses immediately surrounding the project site include: retail and office uses to the north (across Mount Etna Drive); retail and office uses to the south; retail uses, including Genesee Shopping Center, to the east (across Genesee Avenue); and a 50-foot-wide San Diego Gas and Electric (SDG&E) electrical transmission line easement to the west with single-family residential uses further west on the other side of the easement area. A medical office building is located immediately

¹ The Transit Priority Areas map is based on the adopted SANDAG San Diego Forward Regional Plan. In accordance with SB 743, "Transit priority areas" means "an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." "Major transit stop", as defined by Section 21064.3, means: "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service of 15 minutes or less during the morning and afternoon peak commute periods." (City of San Diego 2019)

adjacent to the project site to the northeast (i.e., at the southwest corner of Mount Etna Drive and Genesee Avenue). Figure 1-2 in Chapter 1.0, Project Description, contains an aerial photograph of the project site and vicinity.

Vehicular access to the project site is provided via Genesee Avenue and Mount Etna Drive, with neighborhood access provided by Genesee Avenue and Balboa Avenue, and regional access provided by the I-805 freeway located approximately 1.1 miles to the east and the San Diego Freeway (I-5) located approximately 2.1 miles to the west. Montgomery Field Airport is located approximately 3 miles to the east. San Diego Metropolitan Transit System (MTS) bus routes 27 and 41 run along Genesee Avenue and Balboa Avenue in the project area, with the closest bus stop near the Mount Etna Drive/Genesee Avenue intersection, approximately 175 feet east of the project site.

3.4.2 Regulatory Setting

3.4.2.1 Federal

There are no federal land use regulations applicable to the project.

3.4.2.2 State

There are no State land use regulations applicable to the project.

3.4.2.2 Regional

San Diego Forward: The Regional Plan

The San Diego Association of Governments (SANDAG) is the region's metropolitan planning organization that has regional authority and creates regional-specific documents to provide guidance to local agencies. SANDAG does not have land use authority. SANDAG's San Diego Forward: The Regional Plan (Regional Plan) was adopted by the SANDAG Board of Directors on October 9, 2015 (SANDAG 2015). The Regional Plan combines two of the region's existing planning documents: the Regional Comprehensive Plan (RCP) for the San Diego Region and the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The RCP, adopted in 2004, laid out key principles for managing the region's growth while preserving natural resources and limiting urban sprawl. The plan covered eight policy areas, including urban form, transportation, housing, health environment, economic prosperity, public facilities, our borders, and social equity. These policy areas were addressed in the 2050 RTP/SCS and are now fully integrated into the Regional Plan.

The project site is located within an Urban Area Transit Strategy Boundary and Existing/Planned Community Center on the SANDAG Smart Growth Concept Map (SANDAG 2016a). The Urban Area Transit Strategy Boundary denotes more

heavily populated regional subareas where local transit operators focus high-frequency transit services as specified in the Regional Plan (SANDAG 2016b). Community Centers have minimum transit service that includes high-frequency local bus or streetcar/shuttle service within an Urban Area Transit Strategy Boundary, and a minimum residential target of 20 du/ac (SANDAG 2016b).

3.4.2.3 *Local*

City of San Diego General Plan

State law requires each city to adopt a general plan to guide its future development, and mandates that the plan be periodically updated to ensure its continuing relevance and value (State Planning and Zoning Law, California Government Code, Section 65300). State law also requires the inclusion of seven mandatory elements into the General Plan (land use, circulation, housing, conservation, noise, open space, and safety), but permits flexibility and the inclusion of optional elements to best meet the needs of a particular city.

The City's General Plan sets forth a comprehensive, long-term plan for development within the City. A comprehensive update of the City's General Plan was adopted March 10, 2008, and was based on a new planning strategy for the City developed in the 2002 Strategic Framework Element. Known as the City of Villages strategy, the General Plan aims to redirect development away from undeveloped lands and toward already urbanized areas and/or areas with conditions allowing the integration of housing, employment, civic, and transit uses. This development strategy mirrors regional planning and smart growth principles intended to preserve remaining open space and natural habitat and focus development within areas with available public infrastructure.

The Strategic Framework comprises the introductory chapter of the new General Plan, followed by 10 elements:

- Land Use and Community Planning
- Mobility
- Urban Design
- Economic Prosperity
- Public Facilities, Services, and Safety
- Historic Preservation
- Recreation
- Conservation
- Noise
- Housing

The **Land Use and Community Planning Element** (Land Use Element) provides policies to implement the City of Villages strategy within the context of the City's community planning program. The element addresses land use issues that apply to the City as a whole and identifies the community planning program as the mechanism to designate land uses, identify site-specific

recommendations, and refine citywide policies as needed. The Land Use Element establishes a structure for the diversity of each community and includes policy direction to govern the preparation of community plans. The element addresses zoning and policy consistency, the plan amendment process, airport-land use planning, balanced communities, equitable development, and environmental justice.

The General Plan Land Use and Street System Map (Figure LU-2 in the Land Use and Community Planning Element) designates the project site as Commercial Employment, Retail, and Services (City of San Diego 2015). In addition, the project site is located within an area identified as having a medium propensity for village development (City of San Diego 2015). Factors considered in locating village sites and ranking village propensity include community plan-identified capacity for growth; existing public facilities or an identified funding source for facilities; and an existing or identified funding source for transit service, community character, and environmental constraints. Village propensity also takes into consideration the location of parks, fire stations, and transit routes (City of San Diego 2015). By overlaying the facilities factors with the land uses, the Village Propensity Map of the General Plan illustrates existing areas that already exhibit village characteristics, and areas that may have a propensity to develop as village areas. (City of San Diego 2015)

The **Mobility Element** contains policies that promote a balanced, multi-modal transportation network while minimizing environmental and neighborhood impacts. In addition to addressing walking, streets, and transit, the element also includes policies related to regional collaboration, bicycling, parking, the movement of goods, and other components of the transportation system.

The **Urban Design Element** policies call for development that respects the City's natural setting; enhances the distinctiveness of neighborhoods; strengthens the natural and built linkages; and creates mixed-use, walkable villages throughout the City. The Urban Design Element addresses urban form and design through policies relative to the City's natural environment that work to preserve open space systems and target new growth into compact villages.

The **Economic Prosperity Element** identifies policies intended to improve economic prosperity by ensuring that the economy grows in ways that strengthen industries, retains and creates good jobs with self-sufficient wages, increases average income, and stimulates economic investment in communities.

The **Public Facilities, Services, and Safety Element** is directed at providing adequate public facilities through policies that address public financing strategies, public and developer financing responsibilities, prioritization, and the provision of specific facilities and services that must accompany growth. The

policies within the Public Facilities Element also apply to transportation and park and recreation facilities and services.

The **Conservation Element** contains policies to guide the conservation of resources that are fundamental components of the City's environment, that help define the City's identity, and that are relied upon for continued economic prosperity. The City's resources include, but are not limited to water, land, air, biodiversity, minerals, natural materials, recyclables, topography, viewsheds, and energy.

The **Historic Preservation Element** guides the preservation, protection, restoration, and rehabilitation of historical and cultural resources.

The **Noise Element** provides goals and policies to guide compatible land uses and the incorporation of noise attenuation measures for new uses to protect people living and working in the City from an excessive noise environment. The project's consistency with Noise Element requirements is addressed in Section 2.3, Noise, of this EIR.

The separately adopted 2013-2020 **Housing Element** is intended to assist with the provision of adequate housing to serve San Diegans of every economic level and demographic group. The updated housing element was adopted in March 2013.

Applicable land use goals and policies of the General Plan, and the project's consistency with them, are addressed in the impact analysis later in this section (see **Table 3.4-1** below).

Clairemont Mesa Community Plan

Community plans provide the level of information that is needed to review and assess proposed public and private development projects. As indicated in Figure LU-3 of the Land Use and Community Planning Element of the City's General Plan, the project site is located within the Clairemont Mesa Community Plan (CMCP) area. Originally approved in 1989, the CMCP was most recently revised in April 2011, and the City is currently in the process of completing a comprehensive update of the CMCP.

As indicated in Figure 1-3 in Chapter 1.0, Project Description, of this EIR, the project site is designated by the CMCP as Commercial-Community Center and is located within Community Plan Implementation Overlay Zone (CPIOZ) Type B (CPIOZ-B). Land uses permitted under the Commercial-Community Center designation include shopping areas with retail, service, civic, and offices uses for the community at large within three to six miles, with single-family residential prohibited, and a floor-area ratio (FAR) of 0.25-2.0 (City of San Diego 2015). The

purpose of the CPIOZ is to provide supplemental development regulations tailored to specific sites within community plan areas of the City to ensure that development proposals are reviewed for consistency with the use and development criteria that have been adopted for specific sites as part of the community plan update process (SDMC Section 132.1402(a)). According to the CMCP, only commercial uses should be permitted in the Community Core of the Clairemont Mesa Community; residential uses should not be permitted in order to preserve the core as the commercial center of the community (City of San Diego 2011). With regard to the CPIOZ-B designation, this designation requires proposed development to be processed under a Site Development Permit decided in accordance with the Decision Process 3 (e.g., staff level review, hearing officer hearing, decision to approve or deny) (SDMC Sections 112.0501 and 132.1402(b)). However, certain projects, such as affordable housing projects, may be processed under a Site Development Permit (SDP) decided in accordance with the Decision Process 2 (e.g., staff level review, staff decision to approve/deny) (SDMC Sections 112.0501 and 132.1402(b)).

In addition to identifying land use regulations applicable within specific CMCP land use designations and overlays, the CMCP includes goals and objectives established by residents, property owners, and business owners to guide development within the Clairemont Mesa community. The CMCP contains the following eight elements; those elements relative to the project are briefly described below.

- Urban Design
- Residential
- Commercial
- Industrial
- Transportation
- Open Space and Environmental Resources
- Population-Based Parks and Recreation
- Community Facilities

The **Urban Design Element** describes Clairemont Mesa as “an attractive place to live, work, and play” and key community attributes, including but not limited to, the visual aesthetics of nearby canyons, low-density residential development adjacent to canyons and parks, and well-established single-family neighborhoods on the mesa with views of Mission Bay, the Pacific Ocean, the mountains to the east, and the canyons. Although this element does not include specific goals and objectives, the CMCP has incorporated recommendations throughout other elements to achieve the Urban Design Element’s goal to preserve Clairemont Mesa’s identity for future generations.

The **Residential Element** seeks to maintain Claremont Mesa’s low-density character of predominately single-family neighborhoods and encourage rehabilitation where appropriate. This element presents objectives to guide future residential development within the Clairemont Mesa community in a manner that

would provide a diversity of housing options, ensure that future development is compatible with the existing neighborhood and does not overburden existing community or neighborhood facilities, and locate higher density housing near the commercial areas along transportation corridors. This element also seeks to provide adequate off-street parking.

The **Transportation Element** seeks to provide a safe and efficient transportation system that maximizes access to community activity centers and to destinations within the City while minimizing adverse environmental effects. This element contains objectives to improve the street system to accommodate future growth while minimizing adverse effects, develop a bicycle system, provide an efficient and high level of public transit, enhance pedestrian circulation, enhance the community's image through streetscape improvements, and minimize adverse noise impacts.

The **Open Space and Environmental Resources Element** seeks to provide an open space system that preserves existing canyon and hillsides and dedicate open space areas as infill development occurs within the community. Relevant objectives within this element include to reduce runoff and the alteration of the natural drainage system and to protect the resource value of artifacts and paleontological remains and the community's heritage for future generations.

The **Population-Based Parks and Recreation Element** seeks to provide a system of parks and recreation facilities to meet the recreational needs of the entire community in conformance with Progress Guide and General Plan standards. The relevant objective within this element is to increase recreational opportunities in new residential and commercial development.

The **Community Facilities Element** seeks to establish and maintain high level of public facilities and services to meet the needs of the community. Relevant objectives in this element include providing educational services, police and fire protection, and public utilities in accordance with City standards and maintaining water and sewer facilities to adequately serve the community.

Applicable land use goals and policies of the CMCP, and the project's consistency with them, are addressed in the impact analysis later in this section.

Land Development Code

Chapters 11 through 15 of the City's Municipal Code are referred to as the Land Development Code (LDC), as they contain the City's planning, zoning, subdivision, and building regulations that dictate how land is to be developed within the city. The LDC contains citywide base zones that specify permitted land use, density, floor- area ratio, and other development requirements for given

zoning classifications; as well as overlay zones and supplemental regulations that provide additional development requirements.

Chapters 13 (Zones) and 14 (General Regulations) are of particular relevance to development of the project. Chapter 13, Zones, includes the applicable development regulations for the base zones of the project site.

Chapter 14 of the LDC includes the general development regulations, supplemental development regulations, subdivision regulations, building regulations, and electrical/plumbing/mechanical regulations that govern all aspects of project development. The grading, landscaping, parking, signage, fencing, and storage requirements are all contained within the Chapter 14 general regulations.

As indicated in Chapter 1.0, Project Description, of this EIR, the project site is currently zoned Commercial Office (CO-1-2). The CO zone permits employment uses with limited, complementary retail uses and residential uses as specified, and is intended to apply in large-scale activity centers or in specialized areas where a full range of commercial activities is not desirable (SDMC Section 131.0504). The CO-1-2 zone is intended to accommodate a mix of office and residential uses that serve as an employment center and permits a maximum density of one dwelling unit for each 1,500 SF of lot area. Development at the project site is also subject to development regulations specific to this zone (and the CPIOZ-B overlay), as well as to many general development regulations pertaining to landscaping, lighting, grading, parking, signage, etc.

Applicable land use-related LDC requirements, and the project's consistency with them, are addressed in the impact analysis later in this section. Other applicable LDC requirements are discussed throughout this EIR, particularly in Chapters 1.0 (Project Description) and 2.0 (Significant Environmental Effects of the Project).

3.4.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's California Environmental Quality Act CEQA Significance Determination Thresholds (City of San Diego 2016). A significant land use and planning impact would occur if there would be a/an:

Issue 1: Inconsistency/conflict with an adopted land use designation or intensity leading to significant physical effects on the environment;

Issue 2: Inconsistency/conflict with the environmental goals, objectives, or guidelines of a General or Community Plan;

Issue 3: Substantial incompatibility with an adopted land use plan;

Issue 4: Inconsistency/conflict with adopted environmental plans for an area;

Issue 5: Incompatible uses as defined in an airport land use plan or inconsistency with an Airport Land Use Compatibility Plan (ALUCP) as adopted by the Airport Land Use Commission (ALUC);

Issue 6: Significant increase in the base flood elevation of downstream properties, or construction in a Special Flood Hazard Area or floodplain/wetland buffer zone; or

Issue 7: Physical division of an established community.

For a discussion on Issue 5, see Section 2.2, Hazards and Hazardous Materials, of this EIR. As detailed in Chapter 5.0, Other CEQA Considerations, of this EIR, the project has no potential for significant impacts regarding Issues 6 (base flood elevations) and 7 (physical division of an established community).

It is noted that a project inconsistency or conflict with a land use plan would not in and of itself constitute a significant environmental impact. The plan or policy inconsistency would have to result in a significant physical effect on the environment to be considered significant pursuant to the City's guidelines and CEQA.

3.4.3.1 General/Community Plan Land Use Designation and Zoning Consistency

Issue 1: Would the project result in an inconsistency/conflict with an adopted land use designation or intensity leading to significant physical effects on the environment?

Impact Analysis

Community Plan Amendment and Rezone

As indicated previously, the project site is designated by the General Plan as Commercial Employment, Retail, and Services, and is designated by the CMCP as Commercial-Community Center with a CPIOZ-B overlay. Additionally, western Clairemont Mesa has a height overlay that limits buildings at the site to 30 feet above finished grade (SDMC Section 101.0452.5). An exception to this overlay can be considered as long as the new structure is compatible with surrounding one, two, or three-story structures or is an affordable housing project, as described in SDMC Section 101.0452.5.D.

Under the proposed Community Plan Amendment (CPA), the site would be re-designated to Residential-High (45-73 du/ac), effectively changing its planned land use. The total maximum allowable residential development under the

proposed CPA and rezone (see discussion below) would be 404 multifamily development units, including all density bonus units, provided the future development project's setbacks and building height requirement are consistent with the proposed CPIOZ Type A (CPIOZ-A) supplemental development regulations proposed overlay.

The proposed CPIOZ-A overlay sets the framework for future residential development at the project site and provides site-specific design standards to ensure a high-quality development that provides needed affordable housing opportunities near transit, shopping, and employment. The proposed Mount Etna CPIOZ-A supplemental development regulations are intended to produce a development that is consistent with the existing and emerging plans for the adjacent Community Core, provides active and accessible ground floor uses, and strengthens community connectivity and identity.

The intent of the Mount Etna CPIOZ-A regulations contained in the CPA language (Appendix B) is to provide primarily for affordable homes that complement the surrounding Community Core and existing single-family residential uses. Additional uses that activate the ground floor and provide community benefit for residents and the surrounding community are also desired. The proposed CPIOZ-A supplemental development regulations, which outline specific requirements for ground floor for uses, height, setbacks, landscape/streetscape, architectural design guidelines, and open space are contained in Appendix B of this EIR.

While the project would require a CPA to allow for a future residential development, the associated land use change would not conflict with the environmental goals, objectives or recommendations of the General Plan and CMCP with approval of the proposed CPA. Furthermore, although designated for commercial use, the site has never been utilized as such. Instead, publicly serving uses have occupied the property for the last 50+ years. Specifically, the Clairemont General Hospital was constructed on the site in 1961 and operated until 1989 when the site was purchased for County use. On March 1, 1994, the Board of Supervisors authorized the relocation of the Sheriff's Criminal Investigations Division (a community serving facility) to the project site, which operated on the project site until 2018. No commercial development has ever occurred on the project site.

Regarding the rezone, the project site is currently zoned CO-1-2 which permits commercial uses and one dwelling unit per 1,500 SF of site area. The proposed zone change to RM-3-9 would allow for multiple unit residential with a maximum building height of 70 feet. The CPIOZ-A supplemental development regulations would be consistent with the general intent of the RM-3-9 zone as modified by the regulations contained in Appendix B. The development would also be

consistent with the intent of the RM-3-9 zone as modified by these regulations and any incentives or waivers granted pursuant to Article 3: Supplemental Development Regulations, Division 7: Affordable Housing Regulations of the SDMC and any State allowed density bonus incentives.

Therefore, re-designating and rezoning the property as proposed would not result in less commercial development occurring in the community (County of San Diego 2018) and residential development of a former public-serving use site would not result in significant physical effects on the environment because: (1) the project site is already developed with urban uses; (2) the project site is surrounded by urban uses, (3) the project would allow for infill redevelopment to replace underutilized buildings with multifamily housing; (4) the project site is located within a TPA where higher urban density in close proximity to transit is encouraged; and (5) as an affordable housing project, the project would implement the housing goals expressed in the General Plan and CMCP. Therefore, the land use and planning impacts associated with the proposed project would be less than significant.

3.4.3.2 General/Community Plan Land Use Objective/Policy Consistency

Issue 2: Would the project result in an inconsistency/conflict with the environmental goals, objectives, or guidelines of a General or Community Plan, or a substantial incompatibility with an adopted land use plan?

Impact Analysis

The City's General Plan and CMCP identify goals and policies that guide growth and development Citywide and within the Clairemont Mesa community, respectively. Most of the General Plan's goals are implemented through policy established in the CMCP. General Plan Elements that include land use-related goals and policies that apply to the project include: Land Use; Mobility; Urban Design; Public Facilities, Services, and Safety; Recreation; and Noise. CMCP Elements that include land use-related goals and policies that apply to the project include: Residential; Transportation; Open Space and Environmental Resources; Population-Based Parks and Recreation; and Community Facilities. **Table 3.4-1** identifies the land-use related goals, objectives and policies in the City's General Plan and CMCP applicable to the project, and an analysis of project consistency with them.

As indicated therein, the project would be consistent with these goals, objectives and policies, and with the General Plan City of Villages strategy described in Subsection 2.6.2 above, for reasons that include, but are not limited to:

1. The project would provide for higher density infill redevelopment of an already developed underutilized site within an urbanized area near transit in the Community Core of Clairemont Mesa;
2. The project would intensify urban development, including providing high-density residential development, within an area identified by the City's General Plan Land Use Element as having a medium propensity for village development and an area identified by SANDAG as a Community Center within an Urban Area Transit Strategy Boundary;
3. The project would be developed in accordance with all applicable CPIOZ-A supplemental development standards (e.g., height, architectural, landscaping, lighting, urban design,); and
4. The project would provide the City with much needed affordable housing that is encouraged in the General Plan and Community Plan policies.

Additionally, the project would provide transit supportive residential densities that would have access to existing and planned transit.

**Table 3.4-1
Project Consistency with Applicable Land Use-Related Goals, Objectives, and Policies**

Goals/Objectives/Policies	Consistency Evaluation
City of San Diego General Plan	
<p>Land Use and Community Planning Element Applicable goals: A. <u>City of Villages Strategy</u></p> <ul style="list-style-type: none"> • Mixed-use villages located throughout the City and connected by high-quality transit. 	<p>Consistent: The project proposes a CPA to change the General Plan/CMCP land use designation from Commercial-Community Center to Residential-High (45-73 du/ac), and the CPIOZ from CPIOZ-B to CPIOZ-A. The project would implement the General Plan City Villages Strategy by providing high-density residential uses at the project site, which is identified as having a medium propensity for village development in the General Plan Land Use Element, is within a TPA, and within a SANDAG identified Smart Growth Opportunity Area. The project would add density within an area with access to transit due to its location adjacent to a high-frequency bus stop along Genesee Avenue near Mount Etna Drive. Lastly, the project would represent infill redevelopment on a developed site already served by public services and utilities, and would develop housing within close proximity</p>

Goals/Objectives/Policies	Consistency Evaluation
	to existing shopping and employment opportunities.
<p>B. <u>General Plan Land Use Categories</u></p> <ul style="list-style-type: none"> • Land use categories and designations that remain consistent with the General Plan Land Use Categories as community plans are updated and/or amended. <p>C. <u>Community Planning Goals</u></p> <ul style="list-style-type: none"> • Community plans that maintain or increase planned density of residential land uses in appropriate locations. • Community plans that are kept consistent with the future vision of the General Plan through comprehensive updates or amendments. 	<p>Consistent: The CPA would change the site use and increase the planned intensity of the project site consistent with the vision of the General Plan City of Villages strategy. Therefore, implementation of the proposed CPA would be consistent with these goals. See the Consistency Evaluation for Land Use Goal D below for further discussion.</p>
<p>D. <u>Plan Amendment Process</u></p> <ul style="list-style-type: none"> • Approve plan amendments that better implement the General Plan and community plan goals and policies. • Allow for changes that will assist in enhancing and implementing the community's vision. 	<p>Consistent: Land Use Goal D criteria require that initiation of an amendment be based on compliance with three initiation criteria: a) appears consistent with the goals and policies of the General Plan and community plan and any community plan specific amendment criteria; b) provides additional public benefit to the community as compared to the existing land use designation, density/intensity range, plan policy or site design; and c) public facilities appear to be available to serve the proposed increase in density/intensity, or their provision will be addressed as a component of the amendment process.</p> <p>On December 16, 2018, the City's Planning Commission approved Planning Commission Resolution No. 4979-PC authorizing the initiation of a General Plan Amendment (GPA)/CPA and rezone as requested by the County for this project. The CPA would be consistent with the community's goals and objectives for residential development (page 11 of the CMCP). The project site is adjacent to a variety of urban uses including commercial development, multi-story office towers, an SDG&E easement, and single-family residential development beyond the SDG&E easement.</p> <p>The proposed CPA would not involve any changes to existing single-family zoning within the community. In fact, the CPA would encourage rehabilitation of a currently developed underutilized site and would facilitate infill redevelopment near commercial</p>

Goals/Objectives/Policies	Consistency Evaluation
	<p>uses and within a designated TPA. The CPA would contribute to the community’s residential development objectives to provide a diversity of housing options (Objective 1 of the CMCP) and locate higher density housing near commercial areas and along transportation corridors where there are adequate services (Objective 4 of the CMCP). Multifamily development allowed by the CPA would act as a buffer between commercial areas and single-family neighborhoods to ensure the development is compatible with the existing neighborhood (Objective 3 of the CMCP). Finally, future site development consistent with the CPA would be required to provide the required amount of parking set forth by City parking regulations (Objective 5 of the CMCP).</p> <p>Further, the site has been developed with community/ government uses and served by public services and utilities since 1961. The EIR process for the CPA would ensure that the future site development would not overburden community or neighborhood facilities. The site developer would be required to pay any applicable fees and provide facilities adequate to meet the City’s existing public services requirements (County of San Diego 2018).</p>
<p>Mobility Element Applicable goals: A. <u>Walkable Communities</u></p> <ul style="list-style-type: none"> • A city where walking is a viable travel choice, particularly for trips of less than one-half mile. • A safe and comfortable pedestrian environment. • A complete, functional and interconnected pedestrian network, that is accessible to pedestrians of all abilities. • Greater walkability achieved through pedestrian- friendly street, site and building design. 	<p>Consistent: The proposed CPIOZ-A supplemental development regulations, which outline specific requirements, are contained in Appendix B of this EIR. As indicated therein, the project shall provide for internal and external pedestrian-oriented features that provide clear, safe, and attractive connections to both on-site and surrounding uses. The specific improvement(s) will be selected and processed by the developer in concert with agreement by the City Engineer. Also, the supplemental development regulations require that street trees be planted and maintained along public street frontages to provide a shaded pedestrian environment and give a pedestrian character to the street.</p>
<p>B. <u>Transit</u></p> <ul style="list-style-type: none"> • An attractive and convenient transit system that is the first choice of travel for many of the trips made in the City. • Increased transit ridership. 	<p>Consistent: As indicated previously, the project would be located along MTS bus routes 27 and 41 that run along Genesee Avenue and Balboa Avenue in the project area, with the closest route 41 bus stop near the Mount Etna Drive/Genesee Avenue</p>

Goals/Objectives/Policies	Consistency Evaluation
	<p>intersection, approximately 175 feet east of the project site.</p> <p>The project would reduce regional vehicle miles travelled (VMT) by taking advantage of being in a planned TPA (Chen Ryan 2019).</p>
<p>F. <u>Bicycling</u></p> <ul style="list-style-type: none"> • A city where bicycling is a viable travel choice, particularly for trips of less than five miles. • A safe and comprehensive local and regional bikeway network. 	<p>Consistent: There are currently no bicycle facilities directly accessing the project site on Mount Etna Drive. However, Class II Bike lanes are provided on both sides of Genesee Avenue, and the bike lane on the west side of Genesee Avenue fronting the project site would be retained under the project (Chen Ryan 2019). Furthermore, secure bicycle parking within the community would be required by the project’s TDM program (Chen Ryan 2019).</p>
<p>Urban Design Element Applicable goals:</p> <p>A. <u>General Urban Design</u></p> <ul style="list-style-type: none"> • A built environment that respects San Diego’s natural environment and climate. • An improved quality of life through safe and secure neighborhoods and public places. • A City with distinctive districts, communities, neighborhoods, and village centers where people gather and interact. • Utilization of landscape as an important aesthetic and unifying element throughout the City. 	<p>Consistent: The project would include multiple urban design elements to ensure that the project respects the City’s natural environment and climate, improves quality of life through safe and secure public places, provides distinctiveness where people would gather and interact, and utilize landscaping as an aesthetic and unifying element. The project would do so through the proposed supplemental development regulations included in Appendix B of this EIR that require:</p> <ol style="list-style-type: none"> (1) Community accessible active ground floor space oriented towards the fronting public streets; (2) Building setbacks intended to encourage pedestrian scale and compatibility with adjacent uses; (3) Landscape screening of any surface parking directly adjacent to public rights-of-way; (4) Landscaping of the project site, and the planting of street trees along public street frontages to provide a shaded pedestrian environment; (5) Building articulation that diminishes the appearance of mass and bulk, and that creates visual interest as viewed at the pedestrian scale; (6) Screening and fencing of storage areas, ground-level and rooftop mechanical equipment, and maintenance areas;

Goals/Objectives/Policies	Consistency Evaluation
	<p>(7) Residential open space, including: private (balcony, patio, or roof terrace) exterior open space; and</p> <p>(8) Lastly, it is noted that the project site is currently developed with generic office buildings that feature a minimum of articulation, landscaping, and urban design features. The project would replace the existing buildings with new buildings with high quality architecture and articulation, along with pedestrian facilities, landscaping and open space, all of which would improve the aesthetics of the site. The design of the future development would be subject to the standards in the CPIOZ-A and reviewed for compliance during the building permit process.</p>
<p>B. <u>Distinctive Neighborhoods and Residential Design</u></p> <ul style="list-style-type: none"> • Innovative design for a variety of housing types to meet the needs of the population. • Infill housing, roadways and new construction that are sensitive to the character and quality of existing neighborhoods. 	<p>Consistent: See the Consistency Evaluations for: General Plan Land Use and Community Planning Element Goal 1 above; Urban Design Element Goal A above; and CMCP Residential Objective 1 below.</p>
<p>Public Facilities, Services, and Safety Element</p> <p>Applicable goals:</p> <p>D. <u>Fire-Rescue</u></p> <ul style="list-style-type: none"> • Protection of life, property, and environment by delivering the highest level of emergency and fire- rescue services, hazard prevention, and safety education. 	<p>Consistent: As described in Section 3.6, Public Services, of this EIR, the project would not necessitate the construction of additional fire protection facilities. Additionally, the project would be constructed in accordance with City Building and Fire Code requirements, and would contribute funding to maintain fire protection services provided by the City through payment of Development Impact Fees (DIFs) that would be required prior to issuance of building permits.</p>
<p>E. <u>Police</u></p> <ul style="list-style-type: none"> • Safe, peaceful, and orderly communities. • Police services that respond to community needs, respect individuals, develop partnerships, manage emergencies, and apprehend criminals with the highest quality of service. 	<p>Consistent: As described in Section 3.6, Public Services, of this EIR, the project would not necessitate the construction of additional police protection facilities. Additionally, the project would be constructed in accordance with City lighting and security requirements, and would contribute funding to maintain police protection services provided by the City through payment of DIFs that would be required prior to issuance of building permits.</p>

Goals/Objectives/Policies	Consistency Evaluation
<p>F. <u>Wastewater</u></p> <ul style="list-style-type: none"> • Environmentally sound collection, treatment, re-use, disposal, and monitoring of wastewater. 	<p>Consistent: All sewer facilities would be designed in accordance with the Sewer Design Guide (2013) by the Metropolitan Wastewater Department, City of San Diego. Furthermore, as described in Section 3.8, Utilities and Service Systems, of this EIR, the project would not overburden existing wastewater collection and treatment facilities. Lastly, the project would include residential uses that generate standard municipal sewage. It would not include uses that generate sewage with constituents that could potentially interfere with the ability of the local wastewater treatment plant to meet its treatment and discharge requirements.</p>
<p>G. <u>Storm Water Infrastructure</u></p> <ul style="list-style-type: none"> • Protection of beneficial water resources through pollution prevention and interception efforts. • A storm water conveyance system that effectively reduces pollutants in urban runoff and storm water to the maximum extent practicable. 	<p>Consistent: As indicated in Section 5.2.5, Hydrology of this EIR, project grading activities during construction could temporarily increase the amount of sediment in runoff, which could enter the existing storm drain system and outfall to coastal waters. However, project construction activities would be subject to the requirements of the Construction General Permit and a Stormwater Pollution Prevention Plan (SWPPP) that would ensure that construction activities would not degrade the surface water quality of receiving waters to levels below the standards of the San Diego Regional Water Quality Control Board (RWQCB) and other regulatory agencies. In addition, the project would not substantially increase surface water runoff or the concentration of pollutants in that runoff during operation because: (1) the project site is already developed with impervious urban uses; and (2) additional Best Management Practices (BMPs) would be implemented, as required, to control urban pollutants in runoff from the project.</p>
<p>I. <u>Waste Management</u></p> <ul style="list-style-type: none"> • Maximum diversion of materials from disposal through the reduction, reuse and recycling of wastes to the highest and best use. 	<p>Consistent: As indicated in Section 3.8, Utilities and Service Systems, of this EIR, the project would comply with all applicable solid waste separation, recycling, and diversion requirements during both construction and operation, consistent with the regulatory requirements.</p>

Goals/Objectives/Policies	Consistency Evaluation
<p>M. <u>Public Utilities</u></p> <ul style="list-style-type: none"> Public utilities that sufficiently meet existing and future demand with facilities and maintenance practices that are sensible, efficient and well-integrated into the natural and urban landscape. 	<p>Consistent: The project would have access to all utilities as described in Sections 3.2, Energy, and 3.8, Utilities and Service Systems, of this EIR. The project is an existing developed site and connected to the existing facilities in the surrounding streets, and the project would provide any additional upgrades and/or connections that may be required.</p>
<p>Q. <u>Seismic Safety</u></p> <ul style="list-style-type: none"> Protection of public health and safety through abated structural hazards and mitigated risks posed by seismic conditions. Development that avoids inappropriate land uses in identified seismic risk areas. 	<p>Consistent: As indicated in Section 5.2.4, Geology, Soils, and Seismicity, of this EIR, the project site is not at risk of fault rupture of a known Alquist-Priolo Fault. Furthermore, while the project site is located in the seismically active Southern California area, including in State-designated Seismic Zone 4 that is the highest seismic zone, compliance with applicable California Building Code (CBC) seismic safety requirements would ensure protection of public health and safety and structures are not at risk due to seismic conditions.</p>
<p>Historic Preservation Element Applicable goals:</p> <p>A. <u>Identification and Preservation of Historical Resources</u></p> <ul style="list-style-type: none"> Identification of the historical resources of the City. Preservation of the City's important historical resources. 	<p>Consistent: As indicated in Section 5.2.3, Cultural Resources of this EIR, the existing on-site buildings were constructed as the Clairemont General Hospital in 1961 and are not currently designated as historical resources in the California Register of Historical Resources, and do not qualify as such. Therefore, their demolition under the proposed project would not conflict with the City's goal to identify and preserve historical resources in the City.</p>
<p>Recreation Element Applicable goals:</p> <p>F. <u>Open Space Lands and Resource-Based Parks</u></p> <ul style="list-style-type: none"> A system of pedestrian, bicycle and equestrian paths linking communities, neighborhoods, parks, and the open space system. 	<p>Consistent: See the Consistency Evaluations for General Plan Mobility Element Goals A and F above.</p>
<p>Conservation Element Applicable goals:</p> <p>A. <u>Climate Change and Sustainable Development</u></p> <ul style="list-style-type: none"> To reduce the City's overall carbon dioxide footprint by improving energy efficiency, increasing use of alternative modes of transportation, employing sustainable planning and design 	<p>Consistent: The project is proposed in a planned TPA where transit service exists and is planned in the future. The project would implement a TDM program to reduce single-occupant motor vehicle trips, and encourage use of alternative transportation, as much as possible (Chen Ryan 2019). Therefore, the project would reduce regional vehicle miles travelled (VMT) by taking advantage of being in a TPA (Chen Ryan 2019). All of these</p>

Goals/Objectives/Policies	Consistency Evaluation
<p>techniques, and providing environmentally sound waste management.</p>	<p>conditions would minimize the project's production of mobile source GHG emissions. The future development project that would be allowed under the proposed project would be required to prepare a CAP Consistency Checklist and incorporate design features that minimize its GHG emissions into the final project plans as a condition of approval for the building permit. In addition, the project would be built as a Leadership in Energy and Environmental Design (LEED) Silver or equivalent, which would minimize its carbon footprint through the integration of environmentally sensitive design features focused on minimizing energy usage, water demands, waste production, etc. Additional consistency discussion is presented under Conservation Element Goal D, Water Resources Management.</p>
<p>C. <u>Coastal Resources</u></p> <ul style="list-style-type: none"> • Clean coastal waters by continuing to improve the quality of ocean outfall discharges. 	<p>Consistent: See the Consistency Evaluation for General Plan Public Facilities, Services, and Safety Element Goal G above.</p>
<p>D. <u>Water Resources Management</u></p> <ul style="list-style-type: none"> • Effective long-term management of water resources so that demand is in balance with efficient, sustainable supplies. 	<p>Consistent: The future development project would be built as a LEED Silver or equivalent. Because no specific development plan is proposed, a LEED checklist has not been completed at the time of this analysis. Although exact measures and credits are unknown, the LEED checklist includes requirements for indoor and outdoor water use reduction. By adhering to LEED Silver or equivalent standards, the future residential infill development would be required to include water conservation features, including but not limited to using drought resistant landscaping and low flow plumbing fixtures.</p> <p>By adhering to LEED Silver or equivalent standards, the future residential development would be required to reduce its water use, and would not use excessive amounts of water.</p>
<p>E. <u>Urban Runoff Management</u></p> <ul style="list-style-type: none"> • Protection and restoration of water bodies, including reservoirs, coastal waters, creeks, bays and wetlands. • Preservation of natural attributes of both the floodplain and floodway without endangering life and property. 	<p>Consistent: With regard to the quality of stormwater runoff from the project site, see the Consistency Evaluation for General Plan Public Facilities, Services, and Safety Element Goal G above.</p> <p>With regard to the preservation of natural attributes of floodplains and floodways without endangering life or property, as indicated in Section 5.2.5, Hydrology, of this EIR, the</p>

Goals/Objectives/Policies	Consistency Evaluation
	project site is not located within a Federal Emergency Management Agency (FEMA) designated 100-year floodplain or floodway.
<p>F. <u>Air Quality</u></p> <ul style="list-style-type: none"> • Regional air quality that meets state and federal standards. • Reduction in greenhouse gas emissions effecting climate change. 	<p>Consistent: As described in Section 2.1, Air Quality, of this EIR, the project would be consistent with all regional, state and federal air quality and GHG standards.</p>
<p>I. <u>Sustainable Energy</u></p> <ul style="list-style-type: none"> • An increase in local energy independence through conservation, efficient community design, reduced consumption, and efficient production and development of energy supplies that are diverse, efficient, environmentally-sound, sustainable, and reliable. 	<p>Consistent: As detailed in Section 3.2, Energy, of this EIR, the project would implement a number of energy efficiency features in compliance with Title 24 CALGreen Code regulations, which include measures such as energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. With the implementation of these measures, the project would utilize energy in a sustainable fashion.</p>
Clairemont Mesa Community Plan	
<u>Residential Objectives</u>	
<p>1. Provide a diversity of housing options in selected locations of the community.</p>	<p>Consistent: According to current SANDAG estimates, the majority of residential development within the CMCP consists of single-family detached residential (62 percent) (SANDAG 2016c). The project would develop 404 affordable multi-family housing units that would increase residential diversity by providing residential options other than single-family detached housing units. The project would also provide the City with much needed affordable housing.</p>
<p>3. Provide development guidelines to help ensure that new development is compatible with the existing neighborhood and does not overburden community or neighborhood facilities.</p>	<p>Consistent: The project proposes supplementary development guidelines (Appendix B of this EIR) to help ensure that project development is compatible with the existing neighborhood. See the Consistency Evaluation for General Plan Urban Design Element Goal A above for additional discussion.</p> <p>In addition, while the project would include a CPA and rezone, these changes would be consistent with the City’s Village Strategy and residential development objectives, and would not overburden community or neighborhood facilities. See the Consistency Evaluation for General Plan Land Use and Community Planning Element Goals A and D above for additional discussion.</p>

Goals/Objectives/Policies	Consistency Evaluation
4. Locate higher density housing near the commercial areas and along transportation corridors where there are adequate services.	Consistent: See the Consistency Evaluation for General Plan Land Use and Community Planning Element Goals A and D above.
5. Provide adequate off-street parking.	Consistent: See the Consistency Evaluation for General Plan Mobility Element Goal G above.
<u>Transportation Objectives</u>	
1. Improve the street system as necessary to accommodate the community's growth while minimizing adverse effects on existing residential, industrial, and commercial uses and the open space system.	Consistent: The project would improve roadway frontage as described in the Consistency Evaluation for General Plan Urban Design Element Goal A. No open space would be impacted by the project as the site is already developed with urban uses.
2. Develop a bicycle system that will join parks and recreational areas, schools and commercial activity centers in the community and City.	Consistent: See the Consistency Evaluation for General Plan Mobility Element Goal F above.
3. Provide an efficient and high level of public transit within and surrounding the community. Design and plan land uses that will support and make use of the future light rail transit.	Consistent: The project proposes a CPA to change the land use designation to Residential-High (45-73 du/ac) and the CPIOZ from CPIOZ-B to CPIOZ-A. While the project would not be located along a light rail transit line (the planned Mid-Coast Light Rail Transit line would be located approximately 2 miles to the west), Implementation of the CPA would be consistent with the General Plan City Villages Strategy that intends to integrate housing, employment, civic, and transit uses. Furthermore, the project would intensify residential uses at the project site which is identified as having a medium propensity for village development in the General Plan Land Use Element, and is located within both a 2035 TPA and a SANDAG identified Smart Growth Opportunity Area and along MTS bus routes 27 and 41.
4. Enhance pedestrian circulation, particularly between higher density residential and commercial areas and to active and passive recreation facilities.	Consistent: See the Consistency Evaluation for General Plan Mobility Element Goal A above.
6. Minimize adverse noise impacts.	Consistent: As detailed in Section 2.3, Noise, while the proposed project would result in a temporary increase in ambient noise levels above existing conditions at off-site sensitive receivers during project construction, Mitigation Measure NOI-1 would reduce impacts to less than significant.

Goals/Objectives/Policies	Consistency Evaluation
<p><u>Open Space and Environmental Resources Objectives</u></p> <p>2. Reduce runoff and the alteration of the natural drainage system.</p>	<p>Consistent: As indicated in Section 5.2.5, Hydrology, of this EIR, the project site is already fully developed with and surrounded by urban uses, with stormwater runoff entering the local municipal storm drain system via inlets in the adjacent streets. This drainage pattern would be retained under the proposed project. Furthermore, no natural drainage features (streams, rivers, etc.) currently bisect or are located adjacent to the project site, and the project would not affect any such features.</p> <p>With regard to the quantity of stormwater runoff from the project site, because the project site is fully developed, the project would not appreciably increase impervious surfaces on, or stormwater runoff from, the project site during operation. During construction, the project could temporarily alter drainage conditions at the project site; however, a SWPPP would be implemented during construction to control runoff and avoid on- and off-site flooding during the construction period.</p>
<p>7. Protect the resource value of artifacts and paleontological remains and the community's heritage for future generations.</p>	<p>Consistent: As indicated in Section 5.2.4, Cultural Resources, of this EIR, project site preparation activities during construction would involve ground-disturbing activities that would have the potential to encounter unknown buried archaeological resources. However, since the project site has been previously graded, ground-disturbing activities associated with the project would be expected to encounter artificial fill rather than native soils that would have the potential to contain archaeological resources. Furthermore, the depth of grading is anticipated to be relatively limited as only sheet grading for drainage purposes would be required. As such, the project area would have an extremely low potential for the presence of archaeological resources as defined in CEQA Guidelines Section 15064.5, and the impact to archaeological resources would be less than significant. For similar reasons, there would be no potential to encounter paleontological resources during project construction, and no impact to paleontological resources would occur as noted in Section 5.2.4, Geology, Soils and Seismicity, of this EIR.</p>

Goals/Objectives/Policies	Consistency Evaluation
<p><u>Population-Based Parks and Recreation Objectives</u></p> <p>3. Increase recreational opportunities in new residential and commercial development.</p>	<p>Consistent: The proposed supplemental development regulations included in Appendix B of this EIR require that the project include:</p> <p>(1) Residential open space, including: private (balcony, patio, or roof terrace) exterior open space for at least 50 percent of all residential units; and</p> <p>(2) Common indoor or outdoor open space, including passive and active recreation space with amenities (e.g., tables, benches, trees, shrubs, spas, fitness circuits, etc.).</p> <p>Furthermore, the site developer would be required to pay any applicable fees and provide facilities adequate to meet the City's existing public services requirements (County of San Diego 2018).</p>
<p><u>Community Facilities Objectives</u></p> <p>3. Maintain water and sewer facilities to adequately serve the community.</p>	<p>Consistent: As described in Section 3.8, Utilities and Service Systems, of this EIR, the project would not overburden existing water and sewer facilities.</p>

SOURCE: ESA, May 2019.

3.4.3.2 Consistency with Adopted Environmental Plans

Issue 3: Would the project result in inconsistency/conflict with adopted environmental plans for an area?

Impact Analysis

The project site is not located within an area covered by the City's Multiple Species Conservation Program (MSCP) Subarea Plan or other approved local, regional, or state habitat conservation plans (HCPs). The project site is also not located within and does not contain natural open space, is not located adjacent to areas subject to any adopted HCPs, and is not bisected by or located adjacent to a watercourse or riparian habitat. The project site is currently fully developed with urban uses, and is surrounded on all sides by urban development. Furthermore, the project site is not located within a Federal Emergency management Agency (FEMA) designate 100-year floodplain or a SDMC-designated Special Flood Hazard Area. Therefore, the project would not result in an inconsistency/conflict with adopted environmental plans for the area, and the impact would be less than significant.

3.4.4 Cumulative Impact Analysis

The geographic context for the analysis of cumulative impacts related to land use and planning is the Clairemont Mesa community. Overall, projects that are consistent with the environmental goals, objectives, and policies of a General/Community Plan, and would not result in significant effects on the environment associated with requested deviations to existing regulatory requirements, would have less than significant land use impacts. As indicated in Chapter 1.0, Project Description, of this EIR, 12 cumulative projects are located in the general vicinity of the proposed project. These cumulative projects could, along with the proposed project, result in cumulative land use impacts. However, such impacts would not lead to significant physical effects on the environment that are cumulative in nature because all future projects that develop within the project area would be subject to City land use regulations, including the General Plan, CMCP, and LDC.

The project site is currently designated as Commercial Employment, Retail, and Services in the General Plan and as Commercial-Community and CPIOZ-B in the CMCP, and is currently zoned CO-1-2. As detailed in the impact analysis for the project above, while the project would require a CPA and zone change, the proposed land use changes would not conflict with environmental goals, objectives, or recommendations of the General Plan or CMCP. Additionally, while the project is requesting deviations from selected development regulations, none of the proposed deviations would result in significant physical effects on the environment. Hence, project land use and planning impacts would be less than significant.

Therefore, the project would not have a cumulatively considerable effect on land use, and cumulative land use and planning impacts would be less than significant.

3.4.5 Significance of Impacts Prior to Mitigation

Less than significant.

3.4.6 Mitigation

No mitigation measures are required.

3.4.7 Conclusion

The project would result in less than significant land use and planning impacts.

3.5 Population and Housing

This section provides an assessment of potential impacts related to population and housing that could result from project implementation. Potential impacts addressed in this section include the project's potential to directly, through the construction of additional housing, or indirectly, through the creation of new employment opportunities or the extension or expansion of residential-related infrastructure, result in population growth in the project area.

Comments related to population and housing received during the public comment period for the Notice of Preparation (NOP) included concerns regarding density and substantial population increase in the community of Clairemont Mesa within the city of San Diego. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to impact population growth. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.5.1 Existing Conditions

The proposed project is located within the community of Clairemont Mesa, which is located in the central portion of the city of San Diego. The city encompasses over 342.5 square miles, spans nearly 40 miles north to south and is bounded by the Pacific Ocean, and the cities of Del Mar, Coronado and Imperial Beach to the west, Mexico to the south, the cities of Solana Beach, Escondido, and the unincorporated community of Rancho Santa Fe to the north, and the cities of Poway, Santee, El Cajon, Lemon Grove, Le Mesa, and unincorporated areas of San Diego County to the east.

The community of Clairemont Mesa is bound by Interstate 5 (I-5) to the west, State Route 52 (SR 52) to the north, Interstate 805 (I-805) to the east, and an irregular boundary that roughly follows the Tecolote Canyon Natural Park and Nature Center area across Genesee Avenue to I-805. The community of Clairemont is comprised of three major subareas, which consists of Bay Ho, North Clairemont, and Clairemont. The project site is located in the Clairemont subarea of the community.

3.5.1.1 *Population*

The San Diego Association of Governments (SANDAG) provides updated population/demographics and housing estimates and projections for the San Diego region annually. Since the community of Clairemont Mesa is a community planning area within the city of San Diego, the population estimates for both the community and the city are provided in this analysis. **Table 3.5-1** summarizes population trends for the community of Clairemont Mesa and the city of San

Diego from the year 2000 to 2016 and provides population projections for the next 30 years.

**Table 3.5-1
Population Trends and Projections for the Community of Clairemont and City of San Diego**

	2000	2010	2016	% Change 2000– 2016	2020	2035	2050	% Change 2020– 2050
Community of Clairemont Mesa	78,310	77,922	80,337	2.9%	81,498	86,765	94,965	16.5%
City of San Diego	1,223,400	1,301,617	1,391,676	13.8%	1,453,267	1,665,609	1,777,936	22.3%

Sources: SANDAG 2003a, 2003b, 2010a, 2010b, 2013a, 2013b, 2017a, and 2017b; City of San Diego 2019.

As shown in Table 3.5-1, the community’s population has varied over the years, reflecting a decrease during the economic downturn in the late 2000s (and the job loss that took place throughout the United States and California) and its more recent current increase. The population of the community of Clairemont Mesa increased by 2,295 residents from 2000 to 2016, which represents an increase of approximately 2.9 percent (SANDAG 2003a, 2017a). As of January 1, 2016, the total population in the community of Clairemont Mesa was 80,337 residents, which is forecasted to increase to 81,498 residents by 2020 (SANDAG 2013a, SANDAG 2017a, City of San Diego 2019). SANDAG also forecasts Clairemont Mesa’s population to continue to grow to over the next 30 years to a total population of 94,965 residents, which would equate to an increase of approximately 16.5 percent from 2020 levels (SANDAG 2013a).

Similar to the overall population trends for the community of Clairemont Mesa, the city of San Diego has also experienced population growth within the last 20 years. Since 2000, the city’s population has increased from 1,223,400 residents to 1,391,676 residents in 2016, which represents an increase of approximately 13.8 percent (SANDAG 2003b, 2017b). The city’s population is anticipated to continue to grow substantially over the next 30 years, with the city’s total population anticipated to reach 1,777,936 residents by 2050, which represents an increase of approximately 22.3 percent over 2020 levels (SANDAG 2013b).

3.5.1.2 Housing

According to the City of San Diego 2018 Housing Inventory Annual Report, the City has been identified as one of the least affordable cities in the United States

(City of San Diego 2018). The report states that while the City is actively taking steps to increase housing production, the market is still not keeping up with demand, which is especially true in very-low and low-income housing, and even more so in moderate-income housing. To accommodate the city's growing population and continued economic development, housing production must meet both present and future demands. Housing is a critical component to employment retention, recruitment, and cost.

Table 3.5-2 summarizes housing trends for the community of Clairemont Mesa and the city of San Diego over roughly the last 20 years as well as provides housing projections for the next 30 years. As shown in Table 3.5-2, housing stock in the community of Clairemont Mesa increased by 171 units between 2000 and 2016, or by approximately 0.5 percent (SANDAG 2003a, 2013a). While the housing stock has gradually increased over the last 20 years, SANDAG projects, based on currently adopted plans, that the housing stock in Clairemont Mesa will increase by 5,470 units from 2020 to 2050, which represents an increase of 16.3 percent (SANDAG 2013a).

**Table 3.5-2
Housing Units and Projections for the Community of Clairemont and City of San Diego**

	2000	2010	2016	% Change 2000–2016	2020	2035	2050	% Change 2020–2050
Community of Clairemont	32,759	32,905	32,930	0.5%	33,490	35,234	38,960	16.3%
City of San Diego	469,689	515,412	528,114	12.4%	559,143	640,668	695,703	24.4%

Sources: SANDAG 2003a, 2003b, 2010a, 2010b, 2013a, 2013b, 2017a, and 2017b.

Similar to the housing trends in Clairemont Mesa, the city also experienced growth in the total number of housing units between 2000 and 2016. The city housing stock increased by 58,425 units or approximately 12.4 percent from 2000 to 2016 (SANDAG 2003b, 2013b). SANDAG projects that this growth trend for the city's housing stock will continue with an additional 136,560 units or an increase of approximately 24 percent from 2020 to 2050 (SANDAG 2013b).

3.5.2 Regulatory Setting

3.5.2.1 Federal

There are no applicable federal regulations related to population and housing.

3.5.2.2 State

California Government Code

State law mandates each County and City to plan for enough housing to meet projected growth in California through the preparation of a Housing Element in its General Plan. The purpose of the Housing Element is to identify the community's housing needs; state the community's goals and objectives with regard to housing production, rehabilitation, and conservation to meet those needs; and define the policies and programs that the community will implement to achieve the stated goals and objectives. The City of San Diego General Plan Housing Element 2013–2020 was adopted by the City on March 4, 2013 (City of San Diego 2013). Applicable information from the Housing Element is included below under the discussion of pertinent local regulations.

3.5.2.3 Regional

San Diego Association of Governments Regional Comprehensive Plan

SANDAG's Regional Comprehensive Plan (RCP) serves as the long-term planning framework for the San Diego region. The primary goals of the RCP are to improve the standard of living, enhance the quality of life, promote social and economic equity, and improve the region's sustainability and encourage "smart growth." Issues addressed in the RCP include urban form, transportation, housing, healthy environment, economic prosperity, public facilities, and border issues.

San Diego Association of Governments 2050 Regional Transportation Plan

SANDAG's 2050 Regional Transportation Plan/Sustainable Communities Strategy (2050 RTP/SCS) seeks to guide the San Diego region toward a more sustainable future by integrating land use, housing, and transportation planning to create communities that are more sustainable. The building blocks of the SCS include a land use pattern that accommodates our region's future employment and housing needs, and protects sensitive habitats and resource areas. The primary objective of the 2050 RTP/SCS is to increase mobility for the region's residents by providing a safe and reliable regional transportation system as well as to foster sustainable development throughout the region.

San Diego Association of Governments San Diego Forward: The Regional Plan

SANDAG's Regional Plan serves as a comprehensive planning guide, focusing on growth through the year 2050. It integrates the RCP and RTP/SCS. The RCP, adopted in 2004, provides key principles for managing the region's growth while preserving natural resources and limiting urban sprawl. The plan covers eight policy areas including urban form, transportation, housing, healthy environment,

economic prosperity, public facilities, borders, and social equity. These policy areas are addressed in the 2050 RTP/SCS and are now fully integrated into the Regional Plan. The Regional Plan establishes the importance of providing adequate housing for a growing number of people, from all income levels and at all stages of their lives, as one of the major goals for the region.

San Diego Association of Governments Series 13 Regional Growth Forecast

The SANDAG Series 13: 2050 Regional Growth Forecast serves as the foundation for the San Diego Forward: Regional Plan and other planning documents across the region. The 2050 Regional Growth Forecast includes an overview of the regional demographic, economic, and housing trends expected by 2050.

San Diego Association of Governments Regional Housing Needs Assessment 2010–2020

The California Department of Housing and Community Development (HCD) is mandated to determine the statewide housing need. In cooperation with HCD, local governments and councils of government are charged with determining a city's or region's existing and projected housing need as a share of the statewide housing need. SANDAG is responsible for preparing the Regional Housing Needs Assessment (RHNA) for the San Diego region (18 cities and the County of San Diego). SANDAG adopted the most recent RHNA in October 2011, which is for the fifth Housing Element cycle (January 2013 through December 2020) and covers an eleven-year projection period (2010 through 2020). SANDAG is currently in the process of updating their RHNA for the sixth Housing Element cycle (2021 through 2028), which is anticipated to be adopted by early 2020. The RHNA identifies housing needs for very low income, low income, moderate income, and above moderate income groups in each jurisdiction within the SANDAG region and allocates the amount of housing needed in each jurisdiction for the housing element cycle.

The current RHNA indicates that the San Diego region needs to supply an additional 161,980 housing units in the region to accommodate growth between 2010 to 2020 (SANDAG 2011). Of the total 161,980 additional housing units required in the San Diego region by 2020, the city of San Diego is responsible for providing a total of 88,096 additional housing units by 2020 (SANDAG 2011).

Table 3.5-3 summarizes the breakdown of the RHNA allocations for both the City and San Diego region.

**Table 3.5-3
San Diego Region Regional Housing Needs Assessment Allocation and Progress**

	Total Units	Very Low	Low	Moderate	Above Moderate
RHNA Allocation					
City of San Diego	88,096	21,977	16,703	15,462	33,954
San Diego Region	161,980	36,450	27,700	30,610	67,220
Actual Housing Production (Units) of New Construction (2010-2017)					
City of San Diego	33,159	2,009	2,401	33	28,716
Percent of RHNA Achieved	38 percent	9 percent	14 percent	0.2 percent	85 percent
Total Remaining RHNA	54,937	19,968	14,302	15,429	5,238

Sources: SANDAG 2011, City of San Diego 2018.

As shown in Table 3.5-3, of the City's allocation of 88,096 additional housing units, 21,977 housing units need to be provided for the very low income bracket, 16,703 housing units need to be provided for the low income bracket, 15,462 housing units for the moderate income bracket, and 33,954 housing units for the above moderate bracket (SANDAG 2011).¹ According to the City's 2018 Housing Inventory Annual Report, from 2010 through 2017, the City constructed a total of 33,159 housing units, including 2,009 units at the very low income bracket, 2,401 at the low income bracket, 33 at the moderate income bracket, and 28,716 at the above moderate bracket, totaling approximately 38 percent of the total RHNA allocation (City of San Diego 2018).

3.5.2.4 Local

City of San Diego General Plan

The City of San Diego General Plan Housing Element 2013-2020 was adopted by the City Council in 2013. The Housing Element serves as a policy guide to address the comprehensive housing needs of the city. The following policies related to population and housing are relevant to the proposed project.

Policy HE-B.5: Emphasize the provision of affordable housing in proximity to emerging job opportunities throughout the City of San Diego. Jobs/housing linkages should be considered through the community plan

¹ Very low and low income brackets are defined by Sections 50105 and 50079.5 of the California Health and Safety Code, respectively.

update process. This desired linkage should be reflected through appropriate land use designations and zoning.

Policy HE-I.4: The City's highest housing priority shall be to provide housing for very low- and low-income families and special needs populations.

Clairemont Mesa Community Plan

The Clairemont Mesa Community Plan (CMCP) provides policies and information specific to the community planning area of Clairemont Mesa (City of San Diego 2011). The CMCP outlines various population-based improvements and goals, such as increasing recreation and parks with increased population and providing commercial uses and residential units to accommodate population growth in the community. According to the adopted CMCP, future development of the vacant residential land and redevelopment opportunities within the community could result in an addition of 1,100 dwelling units (not including mixed-use development), totaling 33,000 dwelling units or a three percent increase over the existing housing stock in the 15 years after the existing Community Plan was adopted (City of San Diego 2011). In January 2017, the City of San Diego initiated a comprehensive update to the CMCP, which is currently ongoing, and is expected to allocate more residential housing to the community.

3.5.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in Appendix G of the California Environmental Quality Act (CEQA) Guidelines. Accordingly, a significant population and housing impact would occur if the project would:

Issue 1: Induce substantial unplanned population growth in an area, either directly or indirectly; or

Issue 2: Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

As detailed in Chapter 5.0, Other CEQA Considerations, the project would have no impact regarding Issue 2 as the project site currently does not contain any residential structures and therefore, would not displace existing residents or housing. For a brief discussion on why this issue area was not further evaluated in this section, refer to Chapter 5.0, Other CEQA Considerations, of this EIR.

3.5.3.1 *Unplanned Population Growth*

Issue 1: Would the project induce substantial unplanned population growth in an area, either directly or indirectly?

Impact Analysis

Community Plan Amendment and Rezone

A project has the potential to directly induce unplanned population growth through the construction of additional housing, or indirectly through the creation of new employment opportunities or the extension or expansion of residential-related infrastructure. The project's direct and indirect potential to induce population growth is described below under Issue 1.

The project includes an amendment to the CMCP and a rezone for the project site that would change the underlying land use designation and zone from C0-1-2 to RM-3-9 to allow for a future development at a maximum of 404 multifamily dwelling units (refer to Chapter 1.0, Project Description, for additional details). While a future residential development on the project site could propose less units, for the purposes of CEQA the following analysis evaluates the most conservative scenario of full buildout allowed under the amendment to the Community Plan and rezone.

According to the American Community Survey from SANDAG, the community of Clairemont Mesa had an average multi-family person per household size of 2.05 people (City of San Diego 2019). Assuming an average household size of 2.05 people, maximum buildout of 404 units allowed by the project has the potential to generate an additional 829 people in Clairemont Mesa. As shown in Table 3.5-1 above, population growth in the community of Clairemont Mesa is forecasted to increase by 16.5 percent from 81,498 residents in 2020 to 94,965 residents in 2050 (SANDAG 2013a). Of the increase of 13,467 residents anticipated in Clairemont Mesa, the 829 residents that could be generated by the project would account for approximately 6.2 percent of that projected population increase.

While the proposed project would result in population growth, this growth has already been accounted for in the City's Housing Element and SANDAG's growth projections for the Clairemont Mesa community, where the environmental impacts of such growth were analyzed under those plans' CEQA documents. Thus, the population growth associated with the proposed residential use would be well within the anticipated population growth for the community of Clairemont Mesa and would not exceed the projections on which the City and SANDAG have based plans related to the provision of public services, utilities, and other amenities to maintain the current quality of life it provides to its residents.

In addition, the future residential development that would be allowed by the project is not intended to draw new residents to the area but would rather provide an affordable housing option for residents already residing in the area. The goal of the project is to increase the affordable housing stock within the San Diego region to accommodate the existing population in accordance with the goals established by the RHNA. As shown in Table 3.5-3, as of 2017, the City has only achieved 38 percent of RHNA allocated units, including construction of only 14 percent of low-income units and less than one percent of moderate income units. The proposed project would allow for the development of low to moderate income housing units, providing the City with more housing options for existing residents already residing in the area. Therefore, proposed future residential development allowed under the project would not directly induce substantial unplanned population growth in the community of Clairemont Mesa or the City.

In order to support the proposed 404 residential units proposed for the future development, maintenance personnel and property management staff would be needed during operation of the future development. However, such a use would generate a relatively small number of employees and would not support a large employment staff. In addition, it is anticipated that the majority of the employees would be drawn from within the region's existing employment base and would not require new workers to move to the project area. Therefore, the proposed project would not draw new residents to the area looking for new employment opportunities and as such, would not indirectly induce unplanned population growth.

Site Demolition and Preparation

In conjunction with the amendment to the Community Plan and a rezone to allow for a future residential development, the project would include the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, and mass grading of the site in preparation for future residential construction. Since this aspect of the project would not result in the construction of new housing units, this project component would not directly induce unplanned population growth. However, this project component would require construction workers necessary to implement the demolition and site preparation activities.

However, it is anticipated that construction workers would be drawn from the local and regional work force. As site demolition and preparation would occur for approximately five months, only short-term construction employment would be necessary, and it is assumed construction workers would not be required to relocate from outside the region. The City's existing seasonal and occasional housing stocks would be sufficient to house temporary construction workers, if needed, in addition to local hotel establishments. Therefore, this project component would not indirectly induce unplanned population growth in Clairemont Mesa.

In summary, the increase in residential units that would be allowed for by the project would help to meet regional and local housing demands from projected population growth in the city and the region, specifically the demand for affordable housing units. The project would not result in a substantial direct or indirect increase in population. Therefore, impacts related to unplanned population growth would be less than significant.

3.5.4 Cumulative Impact Analysis

The geographic context for the analysis of cumulative impacts associated with population and housing is the community of Clairemont Mesa. The project has the potential to generate an additional 829 residents and limited new employment opportunities in the project area. Similar to the project, other cumulative projects have the potential to generate population growth either through the construction of new housing units or by providing new employment opportunities in the area. As shown in Table 1-2, there are two cumulative development projects, Jefferson Pacific Beach and The Summit at MB – EOT, which would construct a total of 348 new residential units. Using an average household size of 2.05 persons per household, these projects would increase the population by approximately 714 residents, or 1,543 residents including the proposed project. As shown in Table 3.5-1 above, population growth in the community of Clairemont Mesa is forecast to increase by 16.5 percent from 81,498 residents in 2020 to 94,965 residents in 2050 (SANDAG 2013a). Of the increase of 13,467 residents anticipated in Clairemont Mesa, the 1,543 residents that could be generated by the project plus cumulative projects would account for approximately 11 percent of that increase. While the cumulative projects would result in population growth, this growth within the Clairemont Mesa community has already been accounted for in the City's Housing Element and SANDAG's growth projections, where the environmental impacts of such growth were analyzed under those plans' CEQA documents. Thus, the population growth associated with the cumulative projects would be well within the anticipated population growth for the community of Clairemont Mesa and would not exceed the projections on which the City and SANDAG have based plans related to the provision of public services, utilities, and other amenities to maintain the current quality of life it provides to its residents. Therefore, cumulative impacts related to population and housing would be less than significant.

3.5.5 Significance of Impacts Prior to Mitigation

Impacts related to population and housing would be less than significant.

3.5.6 Mitigation

No mitigation measures are required.

3.5.7 Conclusion

While the proposed project has the potential to increase the residential population by up to 829 residents in the project area, this growth would be well within the anticipated population growth for the community and city. In addition, the population growth would not exceed the projections within the community on which the City has based plans related to the provision of public services, utilities, and other amenities to adequately serve its residents. Furthermore, the proposed project would not induce population growth beyond what is already projected for the city. Therefore, impacts related to substantial unplanned population growth, either directly or indirectly, would be less than significant.

This page intentionally left blank

3.6 Public Services

This section provides an assessment of the potential impacts related to public services that could result from implementation of the proposed project. Potential impacts addressed in this section are associated with fire protection/life safety, police protection, schools, libraries, and maintenance of public facilities, including roads. An assessment of potential impacts related to parks and recreational facilities can be found in Section 3.7, Recreation and Parks, of this EIR.

Comments related to public services received during the public comment period for the Notice of Preparation (NOP) included concerns about addressing current insufficient school capacities and the need for new or expanded schools, maintaining sufficient fire and police services and facilities with the addition of the project, and the lack of sufficient library facilities, where usage would increase with the addition of the project, in the Clairemont Mesa community. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to impact the City of San Diego's (City's) public services. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.6.1 Existing Conditions

3.6.1.1 *Fire Protection/Life Safety*

In the City, the San Diego Fire-Rescue Department (SDFD) provides fire protection and emergency services to approximately 1,419,000 residents (City of San Diego 2019b). Specifically, the SDFD provides fire protection, emergency medical services (life/safety), and lifeguard protection at local beaches across their service area (City of San Diego 2019a). The SDFD employs a total of 1,300 personnel, including 892 fire personnel, 98 permanent uniformed lifeguard personnel, and 246 civilian personnel (City of San Diego 2019b). The SDFD has 52 fire stations and 9 permanent lifeguard stations with up to 31 seasonal lifeguard stations during peak periods. SDFD responded to a total of 159,590 emergency calls in fiscal year 2017, including 113,601 emergency medical responses (71.2 percent of responses), 12,577 urgent medical responses (7.9 percent), 11,385 hazard responses (7.1 percent), and 6,105 fire emergencies (3.8 percent) (City of San Diego 2019b).

The project site is served by Fire Station 36, located at 5855 Chateau Drive, approximately one mile east of the project site. Station 36 serves approximately 5.3 square miles in East Clairemont and its surrounding areas. Station 36 is equipped with a fire engine and paramedic unit. In 2018, Station 36 responded to a total of 2,889 emergency calls, including 1,995 medical emergencies (69 percent), 248 fire emergencies (8.6 percent), 182 hazard emergencies (6.3 percent), and 22 rescue emergencies (0.8 percent) (City of San Diego

2019c). The next closest fire station is Fire Station 37, located approximately 1.5 miles northwest of the project site at 5064 Clairemont Drive, which is equipped with a fire engine.

In addition to the fire protection and life safety services provided by the SDFD, emergency medical services are also provided throughout the City, including the project site, through a public/private partnership between the City's Emergency Medical Services (EMS) and the Rural Metro Corporation (ambulance service). EMS has ambulances, paramedics, and emergency medical technicians who respond to emergency calls. As stated above, Fire Station 36 houses a paramedic unit. All fire department engines and trucks are full Advanced Life Support units and are equipped and capable of managing medical emergencies.

The City's General Plan has a goal for fire protection and life safety first responders to arrive within 7.5 minutes to treat medical patients and control small fires 90 percent of the time. In 2018, the SDFD and EMS were able to meet the 7.5-minute response time standard 74 percent of the time (City of San Diego 2019a). In addition, to provide an effective response force for serious emergencies, a multiple-unit response of at least 17 personnel should arrive within 10.5 minutes from the time of 911-call receipt in fire dispatch 90 percent of the time (City of San Diego 2018a). In 2018, the SDFD and EMS were able to meet the 10.5-minute response time standard 82 percent of the time (City of San Diego 2019a).

3.6.1.2 Police Protection

The San Diego Police Department (SDPD) provides police services throughout the city, where services include patrol, traffic, investigative, records, laboratory, and support services. The SDPD is divided into nine divisions, and of April 2019, included 1,773 sworn police officers (City of San Diego 2019h). The project site is served by the Northern Division located at 4275 Eastgate Mall, approximately 4.8 miles north of the project site (City of San Diego 2019h). The Northern Division serves a 41.3 square mile area with a combined service population of 225,234 people. A total of 139 sworn officers are currently assigned to the Northern Division (City of San Diego 2019h).

The SDPD currently uses a five-level priority dispatch system, which includes in descending order of importance: priority E (Emergency), One, Two, Three, and Four. The calls are prioritized by the phone dispatcher and routed to the radio operator for dispatch to the field units. The priority system is designed as a guide, allowing the phone dispatcher and the radio dispatcher discretion to raise or lower the priority as necessary based on information received. In 2017, the SDPD responded to Priority E calls within 6.9 minutes, which was under the established target of 7.0 minutes; Priority 1 calls within 16.3 minutes, which was over the established target of 14.0 minutes; Priority 2 calls within 43.7 minutes,

which was over the established target of 27.0 minutes; Priority 3 calls within 102.6 minutes, which was over the established target of 80.0 minutes; and Priority 4 calls within 151 minutes, which was over the established target of 90.0 minutes (City of San Diego 2019e). The response times in 2016 for Beat 112, where the project is located within the Northern Division, in minutes were: Priority E calls within 8.1 minutes; Priority 1 calls within 20.6 minutes; Priority 2 calls within 50.3 minutes; Priority 3 calls within 91.1 minutes; and Priority 4 calls within 279.7 minutes (City of San Diego 2019h).

3.6.1.3 Schools

The project site is located within the San Diego Unified School District (SDUSD), which serves over 130,000 students ranging from preschool through grade 12 in 226 educational facilities with approximately 13,560 staff (City of San Diego 2018c). The project site is located within the SDUSD attendance boundaries of Holmes Elementary School, Marston Middle School, and Clairemont High School (SDUSD 2019). **Table 3.6-1** identifies the address, capacity, and enrollment at each of these schools. Other SDUSD schools located in the vicinity include Lafayette, Cadman, Sequoia and Field Elementary Schools, Montgomery and Innovation Middle Schools, Madison High School, Empower and Kavod Charter Schools, and roughly half a dozen other SDUSD facilities.

Table 3.6-1
SDUSD Schools Serving the Project Site

School	Address	Grades	Estimated Program Capacity*	2017-18 Enrollment	2018-19 Enrollment	2019-20 Projected Enrollment
Holmes Elementary	4902 Mount Ararat Dr.	K-5	At capacity	586	560	559
Marston Middle	3799 Clairemont Dr.	6-8	1,184	663	670	693
Clairemont High	4150 Ute Dr.	9-12	1,404	921	920	896

* According to SDUSD, capacities are approximate and calculated using current class size ratios; if class sizes ratios change, additional or less capacity may be available. Homes Elementary is currently operating at full capacity.

SOURCE: SDUSD 2019.

3.6.1.4 Libraries

Library facilities are provided throughout the city by the San Diego Public Library (SDPL) system. The SDPL system serves a population of over 1.3 million residents in the city over an area of 342 square miles (City of San Diego 2019f). The library system consists of the Central Library, 35 branch libraries, and an adult literacy program. The SDPL system receives more than 6 million visitors

per year and has more than 5.0 million items, including e-books and audio visual materials, 3,136 periodical subscriptions, 1.9 million government documents, and more than 250,000 books in 25 languages other than English (City of San Diego 2019f).

There are three SDPL branch libraries in the Clairemont Mesa community. These include: the 5,092 square foot Balboa Branch located on Mount Abernathy Avenue, approximately 1.0 mile east of the project site; the North Clairemont Branch located on Clairemont Drive, approximately 1.4 miles northwest of the project site; and the 4,437 square foot Clairemont Branch located on Burgener Boulevard, approximately 2.3 miles northwest of the project site. The Balboa, North Clairemont and Clairemont Branches have 33,400 volumes, 24,700 volumes, and 28,900 volumes, respectively (City of San Diego 2011).

According to the Clairemont Mesa Community Plan (CMCP), branch libraries are intended to serve about 30,000 residents and should have a maximum service area radius of two miles. In addition to the above standards, branch libraries should have an eventual capacity of 4.4 volumes per square foot of floor area. All three branch libraries currently meet these standards. The CMCP recommends that the Balboa and Clairemont Branches be expanded, based on an increase in the circulation of books from the community (City of San Diego 2011). In 2002, the City Council approved a program to build or improve 24 libraries throughout San Diego, including the Balboa branch, however funding for this project has not yet been identified (City of San Diego 2019k).

3.6.2 Regulatory Setting

3.6.2.1 Federal

There are no applicable federal regulations related to public services.

3.6.2.2 State

California Fire Code

The California Fire Code (Title 24, Part 9 of the California Code of Regulations) establishes regulations to safeguard life and property against hazards of fire, explosion, or dangerous conditions in new and existing buildings, structures, and premises. The Fire Code also establishes requirements intended to provide safety and assistance to firefighters and emergency responders during emergency operations. The provisions of the Fire Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure throughout the State of California. The Fire Code includes regulations regarding fire-resistance-rated construction, fire protection systems such as

alarm and sprinkler systems, fire services features, such as fire apparatus access roads, means of egress, fire safety during construction and demolition, and wildland-urban interface areas. Stairwells associated with parking structures are also required to include fire doors (“Opening Protectives”) (California Fire Code Sections 7703.2, 909.5.2, 1022.2). The California Fire Code has been adopted by the City of San Diego in Municipal Code (SDMC), Chapter 5.

California Health and Safety Code

Additional fire regulations are set forth in Sections 13000 et seq. of the California Health and Safety Code, which include regulations for building standards (including high-rise buildings and childcare facilities), fire protection and notification systems, fire protection devices such as extinguishers and smoke alarms, and fire suppression training.

California Occupational Safety and Health Administration

In accordance with the California Code of Regulations, Title 8 Sections 1270 “Fire Prevention” and 6773 “Fire Protection and Fire Fighting Equipment,” the California Division of Occupational Safety and Health Administration (Cal/OSHA) has established minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire house sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of all firefighting and emergency medical equipment.

California State Assembly Bill 2926: School Facilities Act of 1986

In 1986, Assembly Bill (AB) 2926 was enacted to authorize the levy of statutory fees on new residential and commercial/industrial development to pay for school facilities. AB 2926 was expanded and revised in 1987 through the passage of AB 1600, which added Sections 66000 et seq. to the Government Code. Under this statute, payment of statutory fees by developers serves as California Environmental Quality Act (CEQA) mitigation to satisfy the impact of development on school facilities.

Senate Bill 50

The passage of Senate Bill (SB) 50 in 1998 defined the needs analysis process that is codified in Government Code Sections 65995.5 through 65998. Under the provisions of SB 50, school districts may collect fees to offset the costs associated with increasing school capacity as a result of development. Level I fees are assessed based upon the proposed square footage of residential, commercial/industrial, and/or parking structure uses. Level II fees require the developer to provide one-half of the costs of accommodating students in new

schools, and the state provides the other half. Level III fees require the developer to pay the full cost of accommodating the students in new schools and are implemented at the time the funds available from Proposition 1A (approved by the voters in 1998) are expended. School districts must demonstrate to the State that their long-term facilities needs and costs are based on long-term population growth in order to qualify for this source of funding.

The SDUSD levies the current State Allocation Board Level I fees. The SDUSD requires a developer fee per square foot of assessable space of new residential construction or additions of 500 square feet or more (SDUSD 2019).

Mitigation Fee Act

California Government Code Sections 66000-66025, also known as the Mitigation Fee Act, provides the requirements for development impact fee programs. A development impact fee is a monetary exaction other than a tax or special assessment that is charged by the City to an applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project.

3.6.2.3 Local

City of San Diego General Plan

The Public Facilities, Services, and Safety Element of the General Plan identifies a number of policies intended to ensure adequate public services are available to serve future development.

PF-D.1. Locate, staff, and equip fire stations to meet established response times as follows:

1. To treat medical patients and control small fires, the first-due unit should arrive within 7.5 minutes, 90 percent of the time from the receipt of the 911 call in fire dispatch. This equates to 1-minute dispatch time, 1.5-minute company turnout time, and 5-minute drive time in the most populated areas.
2. To provide an effective response force for serious emergencies, a multiple-unit response of at least 17 personnel should arrive within 10.5 minutes from the time of 911 call receipt in fire dispatch, 90 percent of the time.
 - This response is designed to confine fires near the room of origin, to stop wildland fires to under 3 acres when noticed promptly, and to treat up to 5 medical patients at once.

- This equates to 1-minute dispatch time, 1.5-minute company turnout time, and 8- minute drive time spacing for multiple units in the most populated areas.

PF-E.2. Maintain average response time goals as development and population growth occurs. Average response time guidelines include: Priority E Calls (imminent threat to life) within 7 minutes; Priority 1 Calls (serious crimes in progress) within 12 minutes; Priority 2 Calls (less serious crimes with no threat to life) within 30 minutes; Priority 3 Calls (minor crimes/requests that are not urgent) within 90 minutes; and Priority 4 Calls (minor requests for police service) within 90 minutes.

Clairemont Mesa Community Plan

The CMCP identifies three objectives for population-based parks including:

1. Ensure the use of school playgrounds and other recreational facilities for public use after school hours.
2. Continue to upgrade and modernize park and recreational facilities within the community.
3. Increase recreational opportunities in new residential and commercial development.

The CMCP provides the following recommendation for private recreational facilities:

Residential development projects should be required to provide on-site private recreational facilities in order to prevent overcrowded conditions of park facilities in the future.

- Residential development projects subject to discretionary permit review such as a Planned Residential Development permit, should include recreational facilities, such as lawns, recreation rooms, tennis courts and swimming pools.
- Private or public recreational facilities, such as tennis clubs and health spas and shower facilities should be included in commercial development projects, whenever possible.

City of San Diego Municipal Code

The SDMC contains the ordinances and regulations for the City, including provisions from the 2013 California Fire Code (SDMC Section 5-55.0101), General Rules for Land Development Review (SDMC Section 12), and Fire Permit Procedures (SDMC Section 12-129.0902).

3.6.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant public services impact would occur if the project would:

Issue 1: Have an effect upon, or result in a need for, new or altered governmental services to:

1. Fire protection/Life Safety
2. Police protection
3. Schools
4. Parks/Recreational Facilities
5. Libraries
6. Maintenance of public facilities, including roads.

The above governmental services would be considered to have an impact if there is a physical impact associated with the construction and operation of new or altered governmental facilities. Impacts are not related to changes in service times, response ratios, or performance objectives.

The below analysis only discusses the future development of the project site under the CPA and rezone of the project site. Site demolition and preparation activities (including the demolition of the existing buildings and related facilities) would not result in impacts to governmental services. As discussed in detail in Section 3.5, Population and Housing, this project component does not have the potential to result in permanent population growth, and, as such, does not have the potential to increase the need for governmental services to the extent that would require the construction of new facilities. Therefore, site demolition and preparation activities are not discussed further in this section.

Impacts related to the need for new or altered parks and recreational facilities are discussed in Section 3.7, Recreation and Parks, of this EIR.

3.6.3.1 Fire Protection/Life Safety

Issue 1a: Would the proposed project have an effect upon, or result in a need for new or altered governmental services to fire protection/life safety?

Impact Analysis

Community Plan Amendment and Rezone

Currently, the project site contains the former San Diego County Regional Crime Lab facility, which is non-operational and vacant and as such, generates minimal demand for fire protection and life safety services. The project includes an amendment to the Clairemont Community Plan and a rezone that would allow for a future development on the project site, including a maximum of 404 multifamily residential units. While the future development could propose a reduced number of units, for the purposes of CEQA the following analysis evaluates the worst-case scenario of full buildout allowed under the amendments to the Community Plan and rezone of the project site.

According to the American Community Survey from the San Diego Association of Governments (SANDAG), the community of Clairemont Mesa had an average multi-family person per household size of 2.05 people (City of San Diego 2019). Assuming an average household size of 2.05 people, maximum buildout of 404 units allowed by the project would have the potential to generate an additional 829 residents in the Clairemont Mesa community. These additional residents would create a net increase in demand for fire protection and life safety services from the SDFD Fire Stations 36 and 37, which could result in potentially significant impacts to fire protection and life safety services.

However, while the project would allow for a future residential development that could generate up to an additional 829 residents in the community, implementation of the project would not result in a substantial increase in calls for fire protection and life safety service for several reasons. First, while the project would allow for the conversion of the site from commercial office uses to residential uses, the project site is currently served by SDFD and EMS as the site is contained within their service area. While the SDFD is currently not meeting the City's response time standards, the site is already being served by the SDFD and EMS, and project implementation would not expand the SDFD and EMS service area boundaries or increase the amount of urban land requiring fire protection and life safety services.

Additionally, the future applicant for the residential development would be required to pay the most current City development impact fees related to fire protection service and facilities prior to the issuance of a building permit. Payment of the development impact fees would be based off the total number of

units proposed for the future residential development and would ensure that the future residential project contributes its fair-share contribution to provide funding for the SDFD and associated facilities.

Lastly, the residential development would be required to be designed to comply with all applicable fire safety standards, including those contained in the California Building Code and Fire Code, which require features such as fire suppression sprinklers, fire alarms, onsite fire hydrants, and ensuring adequate emergency access. Compliance with to the latest Fire Code and Building Code fire safety standards would minimize the risk of fire hazards and emergency events at the project site.

Therefore, the proposed project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities in order to maintain acceptable service ratios, response times, or other performance objectives for any fire protection or life safety service agencies. As such, the impacts would be less than significant.

3.6.3.2 Police Protection

Issue 1b: Would the proposed project have an effect upon, or result in a need for new or altered governmental services to police protection?

Impact Analysis

Community Plan Amendment and Rezone

As stated above, the project site is served by SDPD's Northern Division located at 4275 Eastgate Mall, approximately 4.8 miles north of the project site (City of San Diego 2019h). Additional police protection services are provided by the Police Community Relations Office located at 4439 Olney Street, approximately 2.9 miles southwest of the project site.

Similar to the analysis provided above for Issue 1a, the future residential development allowed by the project has the potential to generate up to an additional 829 residents in the Clairemont Mesa community, which would increase demand on the SDPD. However, the project site is contained in the SDPD service area, where police protection services are already being provided to the site. Because the site is already being served by the SDPD, project implementation would not expand the service area boundaries or increase the amount of urban land requiring police protection services. Moreover, while the project would allow for a different type of land use on the project site, the change in land use and higher density of the residential development is not anticipated to substantially increase calls for police protection services to the extent that necessitate the construction of new police facilities.

In addition, the future applicant of the residential development would be required to pay the most current City development impact fees prior to issuance of a building permit. Payment of the development impact fees are to ensure that adequate funding is provided to SDPD to support the project. Furthermore, the residential development would include security features, such as onsite security and sufficient emergency access.

The SDPD would review future development plans as part of their Crime Prevention Through Environmental Design (CPTED) review process to identify potential crime and disorder threats and suggest related design changes prior to project construction. CPTED guidelines include the review and evaluation of common design elements such as streets and sidewalks, building façades and access, public facilities, parking areas, landscaping, fencing and gates, loading and unloading docks, and emergency access. Implementation of CPTED design features would also reduce the project's demands for police services.

Therefore, the proposed project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities in order to maintain acceptable service ratios, response times, or other performance objectives for any police protection services. Impacts would be less than significant.

3.6.3.3 Schools

Issue 1c: Would the proposed project have an effect upon, or result in a need for new or altered governmental services to schools?

Impact Analysis

Community Plan Amendment and Rezone

The proposed project would allow for a future residential development with a maximum of 404 units on the project site, which would have the potential to generate new students and service demand from SDUSD. The future development would include 254 family affordable units and 150 senior residential units. The 150 senior units are excluded from this analysis, as school-age children would not be permitted to live in the units. Student generation rates vary based on the type of project, number of units, bedroom mix, neighborhood, perceived quality of assigned schools, and other factors. There are no district standard student generation rates – student generation rates for the proposed project were based on SDUSD-identified student generation rates from similar residential developments in the vicinity of the proposed project (SDUSD 2019).

Estimated student increases for the proposed project are shown in **Table 3.6-2**. As indicated therein, the project would generate between 167 and 335 students

requiring seats at SDUSD schools, including between 92 and 184 grade K-5 students, between 34 and 69 grades 6-9 students, and between 41 and 82 grades 9-12 students.

**Table 3.6-2
Estimated Project Student Generation**

School Level	Estimated Program Capacity*	2019-20 Projected Enrollment	Generation Rate (Student per Dwelling Unit)	Total Estimated Students Generated by Proposed Project (404 Dwelling Units)
K through 5	At capacity	559	0.363-0.726	92-184
6 through 8	1,184	693	0.135-0.271	34-69
9 through 12	1,404	896	0.161-0.321	41-82
Total	--	--	0.659-1.318	167-335

* According to SDUSD, capacities are approximate and calculated using current class size ratios; if class sizes ratios change, additional or less capacity may be available. Homes Elementary is currently operating at full capacity.

SOURCE: SDUSD 2019.

As shown in Table 3.6-2, there is more than adequate capacity at Marston Middle School and Clairemont High School to accommodate the grades 6 through 8 and grades 9 through 12 students that would be generated by the proposed project. Furthermore, while Table 3.6-1 indicates that Holmes Elementary is currently at capacity, SDUSD has indicated that the students that would be generated by the project can likely be accommodated by existing district facilities at all levels, although elementary school students may need to be redirected to a school other than Holmes Elementary, depending on enrollment and capacity status at the future time when the development is occupied by students (SDUSD 2019). According to SDUSD, other nearby elementary schools in the Clairemont Mesa community would likely have sufficient capacity to house the projected number of K through 5 students, should capacity at Holmes Elementary not be available.

Furthermore, the need for additional school facilities associated with new development is addressed through compliance with school impact fee assessment. SB 50 (Chapter 407 of Statutes of 1998) sets forth a state school facilities construction program that includes restrictions on a local jurisdiction's ability to condition a project on mitigation of a project's impacts on school facilities in excess of fees set forth in the Government Code. These fees are collected at the time of issuance of building permits for commercial, industrial, and residential projects. Pursuant to Government Code Section 65995, the applicant would be required to pay developer fees directly to SDUSD prior to the issuance of a building permit for the future development. SDUSD would be responsible for any potential expansion or development of new facilities, which

would undergo a separate environmental review when specific facilities are planned. Payment of these fees provides full and complete mitigation of school impacts associated with new development.

Therefore, the proposed project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities in order to maintain acceptable service levels for area schools. As such, the impacts would be less than significant.

3.6.3.4 Libraries

Issue 1d: Would the proposed project have an effect upon, or result in a need for new or altered governmental services to libraries?

Impact Analysis

Community Plan Amendment and Rezone

As indicated previously, the project site is served by the SDPL system, which includes the Central Library and 35 branch libraries citywide. Three SDPL branch libraries are located within 2.3 miles of the project site, including the Balboa, North Clairemont, and Clairemont Branches. According to the CMCP, branch libraries are intended to serve about 30,000 residents and should have a maximum service area radius of 2 miles. Branch libraries should have an eventual capacity of 4.4 volumes per square foot of floor area. All three branch libraries in the Clairemont Mesa community currently meet these standards.

The future development allowed by the project has the potential to generate up to an additional 829 residents in the Clairemont Mesa community, which would increase the demand for library services from the SDPL system, especially at the three closest SDPL libraries and at the SDPL Central Library. The future applicant for the residential development would be required to pay the most current City development impact fees related to library facilities prior to issuance of a building permit. Payment of the development impact fees are to ensure that adequate funding is provided to ensure library facilities are provided in the community with the addition of the project. Therefore, with payment of the applicable development impact fees, the project would not significantly impact the SDPL system, especially the library branches located in the Clairemont Mesa community.

In addition, the need to expand a library is based on an increase in the circulation of books from the community. The CMCP recommends that the Balboa and Clairemont Branches be expanded (City of San Diego 2011). In 2002, the City Council approved a program to build or improve 24 libraries throughout San Diego, including the Balboa branch, however funding for this project has not yet been identified (City of San Diego 2019k). The City is responsible for either

expanding existing library facilities or planning and constructing new library facilities, which would be required to undergo a separate environmental review when specific facilities are planned. On a project-by-project basis, payment of the development impact fees provides full and complete mitigation of library impacts associated with new development.

Therefore, the proposed project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities in order to maintain acceptable service levels for area libraries. As such, the impacts would be less than significant.

3.6.3.5 Maintenance of Public Facilities

Issue 1e: Would the proposed project have an effect upon, or result in a need for new or altered governmental services related to maintenance of public facilities, including roads?

Impact Analysis

Community Plan Amendment and Rezone

The design of any future road improvements would be reviewed and approved by the City prior to issuance of a building permit, and the future applicant would be required to pay all applicable fees to the City for maintenance and improvement of public facilities, including roads (City of San Diego 2019j). No other public facility needs or deficiencies have been identified as a result of the project. Therefore, the proposed project would not result in substantial adverse physical impacts associated with the need for new or physically altered governmental facilities related to maintenance of public facilities, including roads. As such, impacts related to the maintenance of public facilities would be less than significant.

3.6.4 Cumulative Impact Analysis

The geographic context for the analysis of cumulative impacts related to public services is the city of San Diego. Implementation of the proposed project in combination with cumulative development in the city could result in an increased demand for public services. However, the City has established a fee structure for all future and cumulative projects to ensure that the City can continue to provide public services and can strive to maintain established service ratios, response times, and other performance objectives for fire and police protection, schools, and other public facilities with future population growth envisioned under the General Plan. These fees allow the City to have a source of funding available to provide new or additional facilities necessary to achieve and maintain adequate public service provisions as development occurs within an area. Therefore, the project's contribution to cumulative impacts associated with fire protection, police

protection, parks and recreational facilities, libraries, and school would be less than significant.

3.6.5 Significance of Impacts Prior to Mitigation

Impacts related to public services would be less than significant.

3.6.6 Mitigation

No mitigation measures are required.

3.6.7 Conclusion

The proposed project would comply with the City's development impact fee structure related to public services, which would mitigate the project's impacts on existing fire protection, life safety, and police services, libraries, schools, and other public facilities. Payment of all applicable fees would ensure that impacts to public services would be less than significant.

This page intentionally left blank

3.7 Recreation and Parks

This section provides an assessment of potential impacts related to recreation and parks and recreational facilities that could result from project implementation. Potential impacts addressed in this section include increased use of existing recreational facilities and the need for the expansion of existing or the construction of new recreational facilities that may be necessary as a result of implementation of the proposed project.

Comments related to recreation and recreational facilities received during the public comment period for the Notice of Preparation (NOP) included concerns regarding ensuring adequate park acreage to accommodate the increase in population and addressing the lack of amenities in the Clairemont Mesa community within the city of San Diego. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to impact recreational facilities. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.7.1 Existing Conditions

The project site is owned by the County of San Diego (County) but is located entirely in the city of San Diego. The project site is currently developed with the former San Diego County Regional Crime Lab facility and associated parking and landscaping. There are no onsite recreational amenities. Recreational facilities in the vicinity of the project site are owned and operated by the city, as described in greater detail below.

3.7.1.1 Existing Parks and Recreational Facilities

The City has over 42,000 acres of park and open space lands that offer a diverse range of recreation opportunities. The community is served by 22 recreational amenities, which include 6 community parks, 7 neighborhood parks, 5 joint use parks at school sites, 3 recreation centers and 1 aquatic complex or swimming pool (City of San Diego 2019). **Table 3.7-1** lists the parks in the Clairemont Mesa community and provides the approximate distance from the project site.

The total acreage of these 22 recreational facilities is approximately 129 acres. The Play All Day Parks Program is a new initiative (2016) between the City and San Diego Unified School District to expand the existing joint-use park program by adding over 45 new joint-use parks throughout the city, including schools located in the Clairemont Mesa community. In the Clairemont Mesa community, a Play All Day joint use park at the Creative Performing and Media Arts Middle school has already been built and is open to the public and an additional 10 new Play All Day joint-use fields are planned (City of San Diego 2019).

**Table 3.7-1
Parks and Recreational Facilities in the Clairemont Mesa Community**

Park	Location	Size (acres)	Distance from Project site (miles)
Non Population-Based Parks			
Regional Parks

Western Hills Neighborhood Park	4810 Kane Street	6.35	2.5
Total Parkland Acres for the City's Parkland Standard (Population- Based Parks)		128.87	

¹ Hickman Field (46.51 acres total) is shared with the Clairemont Mesa community (33.92 acres), Serra Mesa community (9.16 acres) and Kearny Mesa community (3.43 acres)

² Tecolote Community Park (19.67 acres total) is shared with the Clairemont Mesa community (1.26 acres) and Linda Vista community (18.41 acres)

SOURCE: City of San Diego 2011, City of San Diego 2019.

In addition to community, neighborhood, and joint-use parks, there are three regional parks located in the Clairemont Mesa community: Tecolote Canyon Natural Park, Marian Bear Memorial Park, and Mission Bay Park. Tecolote Canyon Natural Park and its associated Nature Center is located approximately three miles southwest of the project site, with a portion of the open-space canyon as close as 500 feet west of the project site. Tecolote Canyon Natural Park consists of approximately 903 acres that bisect the community (City of San Diego 2011). The park has approximately 6.5 miles of trails for jogging, walking and mountain biking and the Tecolote Nature Center with exhibits on animal and plant life of the canyon. Marian Bear Memorial Park is located approximately 1.9 miles north of the project site and consists of approximately 467 acres that spans the northern community boundary from Interstate 5 (I-5) to Interstate 805 (I-805). The park contains a number of trails that are accessible from public roads and the community. Mission Bay Park is located approximately 2.2 miles southwest of the project site and consists of over 4,235 acres in roughly equal parts land and water. Mission Bay Park includes 27 miles of shoreline, offers boat docks and launching facilities, biking and walking paths, basketball courts, and playgrounds.

As shown in Table 3.7-1, the nearest public recreational facility to the project site is Mount Etna Neighborhood Park, which is located approximately 0.45 miles northwest of the project site. This park includes picnic benches, green space, a playground, and three baseball fields. Additionally, Mount Acadia Neighborhood Park is located approximately 0.6 miles south of the project site. This park includes restrooms, green space, picnic benches, a playground, and two baseball fields. In addition, Olive Grove Park is located approximately 0.75 miles northeast of the project site (City of San Diego 2011; City of San Diego 2019).

The City's General Plan guidelines recommend a public park of 2.8 acres for every 1,000 residents, a recreation center for every 25,000 residents, and a community swimming pool for every 50,000 residents (City of San Diego 2008). As of 2017, the Clairemont Mesa community had a reported household population of 80,337 residents, which would require approximately 225 acres of parkland, 3 recreation centers, and 2 swimming pools to meet the City's standard (SANDAG 2017). The community is currently served by 3 recreation centers, meeting this City standard; however, there is currently one swimming pool serving the community, creating a deficiency by one swimming pool. Based on the acreages of the qualifying parks provided in Table 3.7-1, the City is currently providing approximately 129 acres of parkland within the Clairemont Mesa community, which does not satisfy the City's parkland standard, as there is a deficit of approximately 96 acres of parkland in the community.

3.7.2 Regulatory Setting

3.7.2.1 Federal

There are no applicable federal regulations related to recreation.

3.7.2.2 State

Mitigation Fee Act

California Government Code Sections 66000-66025, also known as the Mitigation Fee Act, provides the requirements for development impact fee programs. A development impact fee is a monetary exaction other than a tax or special assessment that is charged by the City to an applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project.

3.7.2.3 Local

City of San Diego General Plan

The City's General Plan provides the long-range planning vision for the city and the Recreation Element provides goals and policies specific to the City's existing and planned recreational resources. The goals and policies of the Recreation Element have been developed to take advantage of the City's natural environment and resources, to build upon existing recreational facilities and services, to help achieve an equitable balance of recreational resources, and to adapt to future recreation needs of residents. The Recreation Element goals and policies applicable to the project include the following:

- RE-A.8. Provide population-based parks at a minimum ratio of 2.8 useable acres per 1,000 residents.
- a. All park types within the Population-based Park Category could satisfy population-based park requirements.
 - b. The allowable amount of useable acres exceeding two percent grade at any given park site would be determined on a case-by-case basis by the City.
 - c. Include military family housing populations when calculating population-based park requirements.
 - d. Ensure that parks are located adjacent to a public right-of-way
 - e. All parks to be designed and constructed consistent with the "Consultant's Guide to Park Design & Development."

RE-A.15. Ensure that adequate funding is identified in public facilities financing plans for the acquisition and development of sufficient land necessary to achieve a minimum ratio of 2.8 useable acres per 1,000 residents or appropriate equivalencies, including any unmet existing/future needs.

RE-A.17. Ensure that all development impact fees and assessments collected for the acquisition and development of population-based parks and recreation facilities be used for appropriate purposes in a timely manner.

Clairemont Mesa Community Plan

The Clairemont Mesa Community Plan (CMCP) provides policies and information specific to the community planning area of Clairemont Mesa within the city. Specific to population-based parks and recreation, the CMCP establishes a goal to provide a system of parks and recreational facilities to meet the recreational needs of the entire community in conformance with the Progress Guide and General Plan standards. Recommendations to achieve this goal, include maintenance, development of a long-term refurbishment program for park facilities, joint use agreements with San Diego Unified School District, as well as the development of turf-ed multi-purpose ball fields on school sites.

3.7.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in Appendix G of the California Environmental Quality Act (CEQA) Guidelines. Accordingly, a significant recreation impact would occur if the project would:

Issue 1: Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated;

Issue 2: Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment; or

Issue 3: Have an effect upon, or result in a need for, new or altered governmental services to parks and recreational facilities.

3.7.3.1 Deterioration of Existing Recreational Facilities

Issue 1: Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Issue 3: Would the project have an effect upon, or result in a need for, new or altered governmental services to parks and recreational facilities?

Impact Analysis

Community Plan Amendment and Rezone

As stated above, the Recreation Element of the City's General Plan establishes a parkland standard of 2.8 acres for every 1,000 residents, a recreation center for every 25,000 residents, and a community swimming pool for every 50,000 residents (City of San Diego 2008). As of 2017, the population in Clairemont Mesa was 80,337 residents, which would require approximately 225 acres of parkland, 3 recreational centers, and two pools to meet the City's standard. As detailed above, the community is currently served by 3 recreation centers, meeting this City standard; however, there is currently one swimming pool serving the community, creating a deficiency by one swimming pool. Based on the acreages of the qualifying parks provided in Table 3.7-1, there are approximately 129 acres of parks located within the Clairemont Mesa community, which is approximately 96 acres below the City's goal of providing 2.8 acres of parkland per 1,000 residents. Thus, the City is currently not meeting its parkland or recreation standard in the Clairemont Mesa community.

The project includes an amendment to the CMCP and a rezone the project site that would allow for a future development on the project site, which would allow for a change in the type of use on the project site (and the rezone and additional units would be incorporated into the current Community Plan Update analysis). The amendment to the CMCP and rezone of the project site would allow for a future development with a maximum of 404 units. While the future proposed development could propose less units, for the purposes of CEQA, the following analysis evaluates the worst-case scenario of full buildout allowed under the amendments to the CMCP and rezone.

According to the San Diego Association of Governments (SANDAG) American Community Survey, the community of Clairemont Mesa had an average number of multi-family persons per household size of 2.05 people in 2017 (City of San Diego 2019). Assuming an average household size of 2.05 people, the maximum buildout of 404 units allowed by the project would have the potential to generate an additional 829 people in the Clairemont Mesa community, as discussed in Section 3.5, Population and Housing, of this EIR. The addition of these 829

residents would result in an increase in the demand on existing recreational amenities within the community, which could result in a potentially significant impact to existing recreational facilities and parks.

With all residential development, the City requires developers to satisfy one of the following three options in order to accommodate recreational needs generated by future development within the city: (1) pay the City's established parks development impact fee; (2) pay a portion of the parks development impact fee and provide dedicated parkland; or (3) provide dedicated parkland and pay the recreation center and aquatic complex portion of the development impact fee. Because the project has the potential to generate an additional 829 residents with development of the future residential building, the future developer would be required to either provide approximately 2.32 acres of parkland to accommodate the new residents or pay the applicable recreation and parks development impact fees to the City prior to issuance of a building permit. The actual amount the future developer would have to pay for the park development impact fee depends on the number of units proposed in the future residential development.

Because the future developer would be providing for the development of additional parklands, either through the payment of development impact fees or by directly constructing or providing the parkland, the increased use of existing parks and recreational facilities would not result in substantial physical deterioration of the existing facilities. Therefore, impacts to existing recreational facilities and parks would be less than significant.

Site Demolition and Preparation

In addition to the amendment to the Community Plan and rezone, the proposed project also includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. Because this component of the project does not include the construction of new residential housing which in turn would induce population growth, this project component has no potential to impact existing recreational facilities or parks. For this reason, no impacts to existing recreational facilities and parks would occur from site demolition and preparation.

3.7.3.2 Expansion or Creation of New Recreational Facilities

Issue 2: Would the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Impact Analysis

Community Plan Amendment and Rezone

As stated above, the project has the potential to generate approximately 829 new residents within the Clairemont Mesa community, which in turn would increase demand on existing parks and recreational facilities in the area. However, the future developer would be required to either (1) pay the City's established parks development impact fee; (2) pay a portion of the parks development impact fee and provide dedicated parkland; or (3) provide dedicated parkland. Through the payment of the parks development impact fee and/or providing new dedicated parkland, the future developer would satisfy the City's requirement to contribute the project's fair share to offset project impacts to the City's existing parks and recreational facilities. Furthermore, even though the City is not currently achieving its parkland standard, it is the City's responsibility to use the parks development impact fees provided from residential development to create new recreational facilities and/or parks. As such, payment of the City's park development impact fees would ensure that the future developer contributes its fair share to the City's park fund, and impacts would be considered less than significant.

Site Demolition and Preparation

In addition to the amendments to the CMCP and rezone of the project site, the proposed project also includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. Because this component of the project does not include the construction or expansion of recreational facilities, no impact to recreation or recreational facilities would occur.

3.7.3 Cumulative Impact Analysis

The geographic context for the analysis of cumulative impacts related to recreational facilities is the community of Clairemont Mesa. The proposed project would allow for the future development of a residential building with a maximum of 404 units, which could generate up to 829 new residents in Clairemont Mesa. Similar to the project, other cumulative development project has the potential to generate population growth. As shown in Table 1-2, there are two cumulative

development projects, Jefferson Pacific Beach and The Summit at MB – EOT, which would construct a total of 348 new residential units. Using an average household size of 2.05 persons per household, these projects would increase the population by approximately 713 residents, or 1,541 residents including the proposed project. The proposed project, in combination with population increases resulting from other cumulative projects in the community, would result in increased demand on park facilities. To meet this demand, new and expanded parks and recreational facilities would be funded by new development within the community via the payment of development impact fees on a project-specific basis. The provision of additional parkland to serve the community could result in a physical impact on the environment which could be significant. However, there are no specific plans for additional parks at this time. The construction of new park facilities would be subject to separate environmental review at the time design plans are available. In addition, cumulative projects would be reviewed by the City during the building permit process to determine acceptable parkland standards. Therefore, with the payment of development impact fees, the proposed project, in combination with other approved and planned developments within the project vicinity, would not result in significant cumulative impacts on parks and recreational facilities.

3.7.4 Significance of Impacts Prior to Mitigation

Impacts related to recreation and recreation facilities would be less than significant.

3.7.5 Mitigation

No mitigation measures are required.

3.7.6 Conclusion

Because the proposed project has the potential to add approximately 829 new residents to the project area, the project would increase demand on existing recreational facilities and parks. However, the future developer of the residential building would be required to either provide approximately 2.32 acres of parkland to accommodate the new residents or pay the applicable recreation and parks development impact fees to the City prior to issuance of a building permit in order to offset project impacts to existing recreational facilities and parks. Furthermore, the project itself does not include new public recreational facilities and would not cause the need for the expansion or creation of recreational facilities. Therefore, impacts to recreational facilities and parks would be less than significant.

This page intentionally left blank

3.8 Utilities and Service Systems

This section discusses potential impacts to utilities and service systems, including water supply, wastewater treatment, and solid waste disposal resulting from implementation of the proposed project.

Comments related to utilities and service systems received during the public comment period for the Notice of Preparation (NOP) included concerns about water supply and infrastructure upgrades. These concerns have been considered and addressed, as applicable, in the following evaluation of the project's potential to impact utilities and service systems. The NOP and all comment letters received in response to the NOP are included in Appendix A of this EIR.

3.8.1 Existing Conditions

The project site is located in the community of Clairemont Mesa in the city of San Diego (city). The project site is currently occupied by the vacant former San Diego County Crime Lab facility. While utilities infrastructure currently serves the project site, to be conservative, this section does not take into account the historic utilities use at the site, but instead assumes there is no current utilities use at the project site due to its vacant status.

3.8.1.1 *Water Supply and Demand*

The proposed project is located within the Miramar service area of the City's Public Utilities Department (PUD) water system (City of San Diego 2016). The PUD stores, treats, and delivers potable water for approximately 1.3 million residents. The water system spans three major water treatment service areas, with three water treatment plants, nine reservoirs, two water reclamation plants, more than 3,000 miles of water transmission and distribution pipelines, and 50 water pump stations (City of San Diego 2016).

The City's PUD relies heavily on imported water as its major water supply and purchases up to 90 percent of its water from the San Diego County Water Authority (SDCWA), which in turn purchases most of its water from the Metropolitan Water District of California (MWD). MWD imports its water from two main supply sources, including the Colorado River Aqueduct (which MWD owns and operates) and the State Water Project (which brings water from the Bay-Delta).

The City's water system is divided into three major service areas: Miramar, which serves the northern portion of the city including the project site; Alvarado, which serves Mission Bay and Mission Valley; and Otay, which serves the southern portion of the city. The Miramar Water Treatment Plant (WTP) is located in Scripps Miramar Ranch and provides drinking water to an estimated 500,000 customers in the northern section of the city, including the project site. The City is

completing an expansion and upgrade of the plant to ensure future customer demand and stringent drinking water standards are met. The Miramar WTP's capacity is 144 million gallons per day (mgd) of treated drinking water and is expected to increase to 215 mgd in 2020 (City of San Diego 2016; City of San Diego 2017).

In addition to imported water, the City has taken multiple actions in recent years to expand its recycled water system. Recycled water contributed to an average of 4 percent of the City's supply portfolio in 2015 (City of San Diego 2016). Recycled water helps reduce demands for potable water by substituting imported potable supplies with non-potable supplies. The City's northern service area provides recycled water distribution to the northern portion of the city. The northern service area receives source water from the North City Water Reclamation Plant (NCWRP). Recycled water does not currently serve the project site (City of San Diego 2011).

The City's existing and planned water supply and demand from 2010 through 2040 was obtained from the City's Urban Water Management Plan, and is shown in **Tables 3.8-1** and **3.8-2**. As shown in Tables 3.8-1 and 3.8-2, the City anticipates have adequate water supplies to meet the future water demand within its service areas.

**Table 3.8-1
City of San Diego Existing and Future Water Supply**

Water Supply Source (Existing and Planned)	Water Supply (AFY)			
	2015	2020	2030	2040
Surface Water	6,279*	22,900	22,700	22,500
Groundwater	500	3,100	3,100	3,100
Recycled Water (non-potable)	8,195	13,650	13,650	13,650
Total Verifiable Local Water Supplies	14,974	39,650	39,450	39,250
SDCWA Water Purchases with Verifiable Regional Water Supplies	173,754	161,334	225,390	234,158
Total Verifiable Water Supplies	198,957	200,984	264,840	273,408

* 2015 represents actual supplies under very dry hydrologic conditions, resulting in very low surface water supplies.

**Table 3.8-2
City of San Diego Historical and Projected Water Demand**

Use	Demand (AFY)			
	2015	2020	2030	2040
Retail Potable Water	167,112	168,340	223,962	230,980
Wholesale Potable Water	10,229	12,200	15,453	15,821
Non-Revenue Water	13,421	15,700	18,020	18,576
Potable Subtotal	190,762	196,240	257,435	265,377
Recycled Water (non-potable)	8,195	13,650	13,650	13,650
Total Demand	198,957	209,890	271,085	279,027
Total Demand with Active Water Conservation Methods	198,957	200,984	264,840	273,408

Source: City of San Diego 2016

3.8.1.2 Wastewater

The City's PUD provides wastewater collection, treatment, and disposal services to the San Diego region, including the project site (City of San Diego 2016). The City collects and treats approximately 160 mgd of wastewater that is generated within its boundaries as well as 12 other agencies that form the Metro Wastewater Joint Powers Authority. Collectively, the wastewater system is known as the Metro System. Facilities in the system include the Point Loma WTP, NCWRP, and South Bay Water Reclamation Plant (WRP), which together collected 190,313 acre-feet of wastewater in 2015 (City of San Diego 2016).

The NCWRP treats wastewater generated by northern San Diego communities, including the project site, and has a total treatment capacity of 30 mgd. In 2015, the NCWRP collected an average daily wastewater inflow of 16 mgd and treated 15 mgd to a secondary treatment level (City of San Diego 2016).

3.8.1.3 Solid Waste

The City of San Diego Environmental Services Department operates the solid waste collection and disposal services to residents throughout the city, including the project site (City of San Diego 2019). Solid waste is collected by one of 21 City-franchised haulers and transported to the Miramar Landfill for disposal. The Miramar Landfill is located at 5180 Convoy Street, approximately two miles northeast of the project site. The Miramar Landfill is the only city-operated active landfill and spans over 1,500 acres. The landfill permits a maximum of 8,000 tons per day, and over 910,000 tons of trash is disposed at this landfill per year (CalRecycle 2019a, City of San Diego 2019). With the addition of the City's Zero

Waste Plan and improved trash compaction methods, the Miramar Landfill's remaining capacity is approximately 11,612,073 tons, and will reach capacity by 2030 (City of San Diego 2015a). The City's waste reduction and recycling programs, aided by innovative engineering, have helped extend the landfill's working life. All cities in California are required to reduce, reuse, or recycle half of their trash. In 2004, the City of San Diego met this requirement with a 52 percent diversion rate, and is currently at a 66 percent diversion rate (City of San Diego 2019).

3.8.2 Regulatory Setting

3.8.2.1 Federal

There are no applicable federal regulations related to utilities and service systems.

3.8.2.2 State

California Administrative Code

The California Administrative Code (CAC) establishes efficiency standards for reducing water usage in new water fixtures. Title 24 CAC, Section 25352, addresses pipe insulation requirements, which reduce the amount of hot water used before reaching equipment and fixtures. Title 20 CAC Section 1604, provides efficiency standards for water fixtures, including lavatory faucets, showerheads, and sink faucets.

California Urban Water Management Planning Act

Adopted in 1983, Section 10610 of the California Water Code established the California Water Management Planning Act (CUWMPA), which requires urban water suppliers to initiate planning strategies to ensure an appropriate level of reliability in its water service. CUWMPA states that every urban water supplier that provides water to 3,000 or more customers, or that annually provides more than 3,000 acre-feet of water service, should make every effort to ensure the appropriate level of reliability in its water service to meet the needs of its various categories of customers during normal, dry, and multi-dry years. The CUWMPA describes the contents of Urban Water Management Plans as well as methods for urban water suppliers to adopt and implement the plans. The City of San Diego adopted its 2015 Urban Water Management Plan in June 2016.

California Senate Bill 7

Senate Bill (SB) 7 (X7-7) was enacted in November 2009 to require all water suppliers to increase water use efficiency. The legislation (California Water Code Section 10608.20) sets an overall goal of reducing per capita urban water use by 20 percent by December 31, 2020. In order to reach this goal, SB X7-7 requires

each urban retail water supplier to report progress in meeting water use targets. The bill also requires wholesale water suppliers to support their retail member agencies efforts to comply with SB X7-7 through a combination of regionally and locally administered active and passive water conservation measures, programs, and policies, as well as the use of recycled water.

California Integrated Waste Management Act of 1989 (Assembly Bill 939)

The California Integrated Waste Management Act of 1989 (AB 939) redefined solid waste management in terms of both objectives and planning responsibilities for local jurisdictions and the state. AB 939 was adopted in an effort to reduce the volume and toxicity of solid waste that is landfilled and incinerated by requiring local governments to prepare and implement plans to improve the management of waste resources. AB 939 required each of the cities and unincorporated portions of the counties throughout California to divert a minimum of 25 percent of the solid waste sent to landfills by 1995 and 50 percent by the year 2000. To attain goals for reductions in disposal, AB 939 established a planning hierarchy using new integrated solid waste management practices. These practices include source reduction, recycling and composting, and environmentally safe landfill disposal and transformation.

California Solid Waste Reuse and Recycling Act of 1991 (Assembly Bill 1327)

The California Solid Waste Reuse and Recycling Act of 1991 (AB 1327) requires adequate areas for collecting and loading recyclable materials within a project site. AB 1327 requires local governments to adopt an ordinance for the transfer, receipt, storage, and loading of recyclable materials in development projects.

California Assembly Bill 341

On October 6, 2011, Assembly Bill (AB) 341 was signed, which establishes a state policy of no less than 75 percent of solid waste generated by source reduced, recycled, or composted by 2020, and required CalRecycle to provide a report to the Legislature that recommends strategies to achieve the policy goal by January 1, 2014. The bill also mandated local jurisdictions to implement commercial recycling by July 1, 2012. The City of San Diego is currently at a 66 percent diversion rate.

California Senate Bill 610

California SB 610 went into effect January 2002 with the intention of linking water supply availability to land use decisions made by cities and counties. SB 610 requires water suppliers to prepare a water supply assessment report for inclusion by land use agencies within the CEQA process for new developments. As defined in SB 610, large-scale projects include residential development projects of more than 500 residential units and/or shopping centers or

businesses employing more than 1,000 people or having more than 500,000 square feet (SF) of floor space.

3.8.2.3 Local

County of San Diego Construction and Demolition Debris Deposit Ordinance

The County Board of Supervisor's requires all County construction and demolition projects comply with the Construction and Demolition Recycling Ordinance (Sections 68.508 through 65.518 to the County Code of Regulatory Ordinances), otherwise known as the Construction and Demolition Ordinance. This program is intended to increase diversion of construction and demolition materials from landfills, conserve landfill capacity, extend the useful life of local landfills and avoid potential consequences to the County if it fails to comply with State waste diversion requirements. The ordinance requires contractors to submit a Construction and Demolition Debris Management Plan, where the contractor shall divert 90 percent of inert materials and 70 percent of all other materials of the project. In order to comply with the ordinance, applicants must submit a Construction and Demolition Debris Management Plan to identify the types and quantities of materials that will be generated by the project and show how materials will be diverted away from landfill disposal using recycling, reduction, and onsite reuse. This ordinance would apply to the proposed project's demolition and site preparation phase of the project, as this phase would occur under the jurisdiction of the County. Construction and operation of the future development would occur under the City's jurisdiction, and would comply with the City's ordinances, as detailed further below.

City of San Diego General Plan

The Public Facilities, Services, and Safety Element of the City of San Diego General Plan addresses facilities and services that are publicly managed and have a direct influence on the location of land uses, including wastewater and water infrastructure. The following policies are relevant to the proposed project:

- Policy PF-H.2: Provide and maintain essential water storage, treatment, supply facilities and infrastructure to serve existing and future development.
- Policy PF-I.1: Provide efficient and effective waste collection services.
 - d. Provide space for recycling containers and efficient collection.
- Policy PF-1.2: Maximize waste reduction and diversion.
 - a. Conveniently located facilities and informational guidelines to encourage waste reduction, diversion, and recycling practices.

- b. Operate public and private facilities that collect and transport waste and recyclable materials in accordance with the highest environmental standards.
- f. Reduce and recycle Construction and Demolition debris. Strive for recycling of 100 percent of inert Construction and Demolition materials and a minimum of 50 percent by weight of all other material.

Clairemont Mesa Community Plan

The Clairemont Mesa Community Plan (CMCP) provides policies and information specific to the community planning area of Clairemont Mesa within the city. The CMCP states that water mains and sewer lines are considered generally adequate throughout the community. The replacement of water mains and sewer lines have been occasionally needed due to aging infrastructure. According to the CMCP, the City of San Diego has a sewer and water main replacement program that is funded on an annual basis. The following CMCP policies related to utilities and service systems are relevant to the proposed project.

Primary Goal for Community Facilities: Establish and maintain a high level of public facilities and services to meet the needs of the community.

Objective 3: Maintain water and sewer facilities to adequately serve the community.

City of San Diego Zero Waste Plan

The City's Zero Waste Plan was approved and adopted by City Council on July 13, 2015. The Zero Waste Plan lays out strategies to divert 75 percent of all trash by 2020, 90 percent diversion by 2035, and an ultimate goal of zero waste by 2040. The City of San Diego is currently at a 66 percent diversion rate.

City of San Diego Recycling Ordinance

The City's Recycling Ordinance requires on-site recyclable collection for all single-family residences; City-serviced multi-family residences; and privately-serviced businesses, commercial/institutional facilities, apartments, condominiums, and special events requiring a City permit. The ordinance requires recycling of plastic and glass bottles and jars, paper, newspaper, metal containers and cardboard. City-serviced residences and privately-serviced commercial and institutional properties must also recycle rigid plastics including clean food waste containers, jugs, tubs, trays, pots, buckets, and toys. To monitor compliance with the ordinance, annual reports must be submitted to the City's Environmental Services Division from those providing recyclable material collection services.

City of San Diego Refuse and Recyclable Materials Storage Regulations

The City's Refuse and Recyclable Materials Storage Regulations indicate the minimum exterior refuse and recyclable material storage areas required at residential and commercial properties. These are intended to provide permanent, adequate, and convenient space for the storage and collection of refuse and recyclable materials; encourage recycling of solid waste to reduce the amount of waste material entering landfills; and meet the recycling goals established by the City Council and mandated by the State of California. The regulations provide minimum requirements for the size and location of material storage areas.

City of San Diego Ordinance 0-17327 (Mandatory Reuse Ordinance)

This ordinance, adopted by the City Council in 1989, requires that "recycled water shall be used within the City where feasible and consistent with the legal requirements, preservation of public health, safety, and welfare, and the environment." Compliance with this ordinance for new development is made a condition of tentative maps, land use permits, etc., based on the project's location within an existing or proposed recycled water service area.

City of San Diego Construction and Demolition Debris Deposit Ordinance

San Diego Municipal Code (SDMC) Section 66.0701 et seq., the 2008 Construction and Demolition (C&D) Debris Deposit Ordinance, requires that the majority of construction, demolition and remodeling projects pay a refundable C&D Debris Recycling Deposit and divert their debris by recycling, reusing or donating usable materials. The ordinance is designed to keep C&D materials out of local landfills. The Ordinance requires project applicants to submit a Waste Management Form with the building permit or demolition/removal permit, to provide a general estimate of the total waste generated by the project including how much will be recycled. The code requires a minimum diversion rate of 50 percent for building permits or demolition/removal permits issued within 180 calendar days of the effective date of the ordinance, and a minimum diversion rate of 75 percent for building permits or demolition/removal permits issued after 180 calendar days from the effective date of the ordinance, provided that a certified recycling facility which accepts mixed construction and demolition debris is operating within 25 miles of the City Administrative Building.

3.8.3 Analysis of Project Effects and Determination as to Significance

For purposes of this EIR, the identified significance thresholds are based on criteria provided in the City of San Diego's CEQA Significance Determination Thresholds (City of San Diego 2016). Accordingly, a significant utilities and service systems impact would occur if the project would:

Issue 1: Result in a need for new systems, or require substantial alterations to existing utilities, the construction of which would create physical impacts (natural gas, water, sewer, communications systems, solid waste disposal);

Issue 2: Result in the use of excessive amounts of fuel or energy (e.g. natural gas);

Issue 3: Result in the use of excessive amounts of power;

Issue 4: Use of excessive amounts of water;

Issue 5: Landscaping which is predominantly non-drought resistant vegetation;

Issue 6: Would the proposed project have an effect upon, or result in a need for new or altered solid waste facilities.

For a discussion on Issue 2 and 3, refer to Section 3.2, Energy, of this EIR.

3.8.3.1 New or Altered Utilities

Issue 1: Would the project result in the need for new systems or require substantial alterations to existing utilities, the construction of which would create physical impacts (water, sewer, natural gas, communications systems, and solid waste disposal)?

Issue 5: Would the project have an effect upon, or result in a need for new or altered solid waste facilities?

Impact Analysis

Water

Community Plan Amendment and Rezone

Similar to existing conditions, the City's PUD would continue to serve the project site. As previously detailed, SB 610 require a discussion regarding the availability of water to meet projected water demands of large-scale projects. As defined in SB 610, large-scale projects include residential development projects of more than 500 residential units. The project includes an amendment to the CMCP and rezone that would allow for a residential development with a maximum of 404 units. As the proposed project includes less than 500 units, the project does not meet the CEQA significance threshold of SB 610, and therefore, a water supply assessment and verification is not required for the project. Thus, the proposed project would not require the construction of new water treatment facilities or an expansion of existing facilities, and impacts would be less than significant.

Site Demolition and Preparation

In addition to the amendment to the Community Plan and rezone, the proposed project also includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. Demolition would require some water for dust control, which would be provided by water trucks and would not affect the City's water supply. No other water would be required for demolition or site preparation activities. Therefore, no impact would occur.

*Wastewater**Community Plan Amendment and Rezone*

As previously detailed, the proposed amendment to the CMCP and rezone would allow for a future development with a maximum of 404 units, which could generate up to approximately 829 residents. Based on the City of San Diego PUD Sewer Design Guide, the future development would result in an increased generation of approximately 67,154 gpd (or 0.06 mgd) of wastewater, as shown in **Table 3.8-3**. This estimate is conservative, as it does not take into account the historical wastewater generation that has occurred at the project site.

**Table 3.8-3
Proposed Wastewater Generation**

Land Use Category	Area (units or SF)	Average Daily Wastewater Generation	Total Average Wastewater Generation
Residential	404 units (829 people)	166 gpd per unit	67,064 gpd
Commercial (Community Accessible Ground Floor Space)	1,500 SF	0.06 gpd per SF	90 gpd
Total			67,154 gpd

SOURCE: Wastewater demand factors from the City of San Diego Sewer Design Guide (City of San Diego 2015b)

Similar to existing conditions, the City's PUD would continue to serve the project site. The NCWRP has a maximum treatment capacity of 30 mgd, and is currently operating at approximately 16 mgd (City of San Diego 2016). Thus, the NCWRP has a remaining treatment capacity of 14 mgd. The future development's wastewater generation of 0.06 mgd would be less than one percent of this remaining capacity. This remaining treatment capacity of the NCWRP is considered adequate to serve the future development's wastewater demands. The proposed project would not require the construction of a new or expanded wastewater facilities, and impacts would be less than significant.

Site Demolition and Preparation

In addition to the amendment to the Community Plan and rezone, the proposed project also includes the demolition of the existing unoccupied buildings and related facilities on-site, disposal of the demolition debris, mass grading of the site, and existing utilities stubbed out to the project site boundary. Demolition would require a minimal amount of wastewater generated by construction workers. Wastewater generated during demolition would be collected within portable toilet facilities. All wastewater generated in portable toilets would be collected by a permitted portable toilet waste hauler and appropriately disposed of at an identified liquid-disposal station, which would not affect the City's existing wastewater system. Therefore, construction or expansion of wastewater facilities would not be required for demolition of the project site, and no impact would occur.

Natural Gas

Community Plan Amendment and Rezone

Refer to Section 3.2, Energy, for a discussion on the demand of natural gas at the project site. Any construction of natural gas lines associated with the future development would occur in accordance with the City and SDG&E's permitting processes and construction standards to avoid or minimize impacts on environmentally sensitive habitat areas and landforms through siting, grading or excavation, and erosion. Therefore, impacts associated with natural gas facilities from buildout of the future development would be less than significant.

Site Demolition and Preparation

Demolition of the project site would not require new or expanded natural gas lines. Any temporary need for on-site power would be obtained through mobile generators. Thus, no impact would occur.

Communications Systems

Community Plan Amendment and Rezone

Communication systems for telephone, internet, and cable television are serviced throughout the city by utility providers such as Cox, Spectrum Time Warner, AT&T, and other private utility companies. Future siting of communications infrastructure would be in accordance with the Land Development Code, including Section 141.0420 regulating wireless communications facilities, as well as the City's Wireless Communications Facilities Guidelines, which seek to minimize visual impacts. Any construction of communications systems associated with future development would occur in accordance with the City's permitting processes and construction standards to avoid or minimize impacts on environmentally sensitive habitat areas and landforms through siting, grading or excavation, and erosion. Therefore, impacts associated with communications facilities from buildout of the future development would be less than significant.

Site Demolition and Preparation

Demolition of the project site would not require new or expanded telephone, internet, or cable television service, as construction workers would use their current cell phone company provider to make necessary calls. Thus, no impact would occur.

*Solid Waste**Community Plan Amendment and Rezone*

The City's threshold for direct impacts on solid waste facilities are projects that include the construction, demolition, or renovation of 1,000,000 SF or more of building space, as they may generate approximately 1,500 tons of waste or more, creating a direct impact. Construction of the future development would generate a variety of solid waste consisting of metals, concrete, asphalt, wood, plastics, and other building materials, some of which can be recycled. Multi-family residential construction is expected to generate approximately 1.2 tons of waste per unit per year (City of San Diego 2012). Nonresidential construction (the proposed future community use) is expected to generate approximately 0.00028 tons of waste per square foot per year (City of San Diego 2012). As shown in **Table 3.8-4**, operation of the future proposed development would generate a total of approximately 486 tons of solid waste per year. While the design and exact SF of the future development is currently unknown at the time of this analysis, the construction of the future development would be expected to generate 486 tons of solid waste per year, which is under the City's direct impact threshold of 1,500 tons of waste or more. Therefore, a less than significant impact would occur related to need for new or altered solid waste facilities.

**Table 3.8-4
Solid Waste Generation Estimates for Project Construction**

Land Use Category	Area (units or SF)	Total Solid Waste Generation Rate	Total Solid Waste Generation (tons per year)
Residential	404 units	1.2 tons per unit	484.8 tons per year
Community Accessible Ground Floor Space ¹	1,500 SF	0.00028 tons per SF	0.42 tons per year
Total			485.22 tons per year

¹ The commercial land use category generation rates were used for the ground floor space.

SOURCE: City of San Diego 2012

Similar to construction, the City's threshold for direct operational impacts on solid waste facilities are projects that include the construction, demolition, or renovation of 1,000,000 SF or more of building space, as they may generate

approximately 1,500 tons of waste or more, creating a direct impact. Operation of the future development would continue to be serviced by the City of San Diego Environmental Services Department, which operates the solid waste collection and disposal services to residents throughout the city. The estimated annual waste to be generated during occupancy of the future development is based on findings from the State of California’s Department of Resources Recycling and Recovery (CalRecycle) Residential and Commercial Sector Generation Rates (CalRecycle 2019b). The generation rate is based on the average of five case studies for multi-family projects and three case studies for commercial retail projects. The studies found that the estimated solid waste generation rate for multi-family units is an average of 5.1 pounds per dwelling unit per day, and for commercial projects is an average of 0.02 pounds per SF per day. Once buildout is complete, the future development could generate approximately 382 tons of solid waste per year, as shown in **Table 3.8-5**. Based on the site capacity established by the CPA, the operation of the future development would likely generate approximately 382 tons of solid waste per year, which is under the City’s direct impact threshold of 1,500 tons of waste or more.

**Table 3.8-5
Operational Solid Waste Generation**

Land Use Category	Area (units or SF)	Total Solid Waste Generation Rate	Total Solid Waste Generation
Residential	404 units	5.1 pounds per unit per day	376 tons per year
Commercial (Community Accessible Ground Floor Space)	1,500 SF	0.02 pounds per SF per day	6 tons per year
Total			382 tons per year

SOURCE: CalRecycle 2019b

Further, the proposed project would comply with all state and local regulations pertaining to solid waste management and diversion, including state’s goals established in AB 939, AB 1327, and AB 341. In addition, per the City’s Recycling Ordinance, solid waste would be recycled during operation to the maximum extent possible. The City’s Recycling Ordinance requires on-site recyclable collection, including the recycling of plastic and glass bottles, paper, newspaper, metal containers, and cardboard. With implementation of the City’s Recycling Ordinance, the proposed project would not result in the need for new or altered solid waste facilities, and a less than significant impact would occur related to solid waste associated with the operation of the future development.

Site Demolition and Preparation

As previously detailed, the City's threshold for direct impacts on solid waste facilities are projects that include the construction, demolition, or renovation of 1,000,000 SF or more of building space, as they may generate approximately 1,500 tons of waste or more. The proposed project would include demolition of the existing onsite structures, parking areas, and landscaping. The project site is currently developed with a 66,000 SF building, 36,000 SF warehouse building, and a 1,500 SF garage, for a total of 103,500 SF. Demolition of the existing buildings and site improvements would be under the City's threshold of 1,000,000 SF. The demolition portion of the proposed project would not result in a need for new or altered solid waste disposal facilities, and impacts would be less than significant.

3.8.3.2 Water Conservation and Landscaping

Issue 4: Would the project use excessive amounts of water?

Issue 5: Would the project include landscaping which is predominantly non-drought resistant vegetation?

Impact Analysis

Community Plan Amendments and Rezone

As detailed in the CPIOZ Type A (CPIOZ-A) design standards of the Community Plan Amendment (CPA) (Appendix B), a minimum of 15 percent of the project site would be required to be landscaped under the future development. In addition, street trees would be required to be planted and maintained along public street frontages. At the time of this analysis, it is unknown the type of plants that would be planted. However, the future development allowed by the project would be built as a Leadership in Energy and Environmental Design (LEED) Silver or equivalent. While the LEED checklist has not been completed at the time of this analysis and exact measures and credits are unknown, the LEED checklist includes requirements for indoor and outdoor water use reductions (USGBC 2019). By adhering to LEED Silver or equivalent standards, the future development would be required to include water conservation features, including but not limited to using drought resistant landscaping and low flow plumbing fixtures.

By adhering to LEED Silver or equivalent standards, the future development would be required to reduce its water use, and would not use excessive amounts of water. Therefore, impacts related to indoor and outdoor high water use and landscaping would be less than significant.

Site Demolition and Preparation

The proposed project would include demolition of the existing onsite structures, parking areas, and landscaping. As previously detailed in Section 3.8.3.1 above, demolition would require some water for dust control, which would be provided by imported water trucks. No other water would be required for demolition of the existing structure, and no landscaping would be part of this phase. Demolition would not use excessive amounts of water, and no impact would occur.

3.8.4 Cumulative Impact Analysis

3.8.4.1 Water and Wastewater

The geographic scope for cumulative impacts on water and wastewater resources is the City's PUD service system. Cumulative impacts associated with water and wastewater could occur if the proposed project, in combination with cumulative projects, resulted in a need for new systems which would create physical impacts. Construction and operation of the proposed project, in combination with cumulative projects, would result in an increased demand for water and wastewater services. The City, as the provider of water and wastewater facilities, would confirm availability of adequate water supply, water treatment capacity, and wastewater treatment capacity prior to future project approval. In addition, the City has established a capacity fee structure for all projects to ensure that the City can continue to maintain water and sewer connections and water flow new and altered developments (City of San Diego 2014). These fees would apply to both the proposed project and future cumulative projects, and would provide for the development of additional facilities to service new development and population, as needed. In addition, the City anticipates growth within its boundaries, which is consistent with the projections of the City's 2015 Urban Water Management Plan. The City's water supply projections anticipate an increase through 2040, despite drought and environmental restrictions, due to water conservation. The City's projected supply of water will meet demand through 2040 (as shown on Tables 3.8-1 and 3.8-2). The City would continue to monitor population growth and update water and sewer facility planning to adjust changes in growth and economic conditions. With these factors, it can be reasonably assumed that the City would continue to keep pace with the population growth within the City such that demand and performance objectives of water supply and wastewater systems are met. As a result, cumulative impacts related to water and wastewater facilities would be less than significant, and no mitigation measures would be required.

3.8.4.2 Solid Waste

The geographic scope for the analysis of cumulative impacts in regards to landfill capacity is the Miramar Landfill. The Miramar Landfill has a remaining capacity of 11,612,073 tons, and is estimated to reach capacity by 2030. Although there is limited landfill capacity, cumulative projects would be required to comply with City ordinances regarding recycling and the required diversion rate of solid waste to ensure solid waste generation is minimal.

In addition, per City policy, cumulative projects (including the proposed project) that include construction, demolition, and/or renovation of 40,000 SF or more of building space are required to prepare waste management plans to show waste diversion measures. As detailed above, the proposed project would demolish 103,500 SF of existing buildings, which would be above the City's threshold of 40,000 SF. However, the demolition and site preparation phase of the project would occur under the jurisdiction of the County, and would be required to implement the County Construction and Demolition Debris Deposit Ordinance. The ordinance requires contractors to submit a Construction and Demolition Debris Management Plan, where the contractor shall divert 90 percent of inert materials and 70 percent of all other materials of the project. Therefore, the demolition and site preparation phase of the proposed project would not contribute to a cumulatively considerable impact.

Construction and operation of the future development would occur under the jurisdiction of the City. While the design and exact SF of the future development is currently unknown at the time of this analysis, it is likely that the future development would be greater than 40,000 SF, resulting in a potentially significant cumulative impact. However, the proposed project would be required to prepare a project-specific waste management plan as a condition of the building permit (as detailed in Appendix B). According to the City's CEQA Significance Determination Thresholds, implementation of a project-specific waste management plan would reduce cumulative solid waste impacts to below a level of significance. Therefore, in combination with cumulative projects, the future development would not contribute to a cumulatively considerable impact on landfill capacity.

3.8.5 Significance of Impacts Prior to Mitigation

Impacts related to utilities and service systems would be less than significant.

3.8.6 Mitigation

No mitigation measures are required.

3.8.7 Conclusion

The proposed project would not result in the need for new systems or require substantial alterations to existing utilities, the construction of which would create physical impacts, including water, sewer, and solid waste disposal. In addition, the proposed project would not use excessive amounts of water or include landscaping that is non-drought resistant. Impacts related to utilities and service systems would be less than significant, and no mitigation would be required.

CHAPTER 4.0 PROJECT ALTERNATIVES

4.1 Scope and Purpose

CEQA Guidelines Section 15126.6(a) of the State CEQA Guidelines requires that an EIR compare the effects of a “reasonable range of alternatives” to the effects of a project. Section 15126.6(a) also provides that an EIR need not consider every conceivable alternative to a project. Instead, the EIR must consider a reasonable range of potentially feasible alternatives that will foster informed decision-making and public participation. However, an EIR need not consider alternatives that are infeasible. There also is no ironclad rule governing the nature or scope of the alternatives to be discussed in an EIR, other than the “rule of reason.” The “rule of reason” governing the range of alternatives specifies that an EIR should only discuss those alternatives necessary to foster meaningful public participation and informed decision-making.

Because an EIR must identify ways to mitigate or avoid significant effects that a project may have on the environment (Public Resources Code Section 21002.1), the purpose of an EIR’s alternatives discussion is to focus on alternatives to the project or its location that are capable of avoiding or substantially lessening any significant effects of the project, even if the alternatives would impede to some degree the attainment of the project’s objectives or be more costly. Further, CEQA requires that an EIR identify the environmentally superior alternative from among the alternatives.

The proposed project would result in potential impacts to the following categories: (1) those impacts determined not to be significant, including aesthetics, biological resources, agriculture and forestry resources, cultural resources, energy, geology/soils/seismicity, greenhouse gas emissions, hydrology, mineral resources, population and housing, recreation, public services, utilities, tribal cultural resources, land use and planning and wildfire, and (2) those impacts reduced to less than significant with implementation of mitigation measures, including air quality, hazards and hazardous materials, and noise and vibration. The proposed project would also result in impacts that would be partially mitigated but remain significant and unavoidable on a direct and cumulative level for transportation/traffic because improvements were either infeasible or not assured such that all of the impacts would be reduced to a less-than-significant level.

The focus of this alternatives analysis is on their ability to reduce or substantially lessen the significant impacts of the proposed project described above; however, a brief discussion is provided on whether or not the alternatives would change any of the impacts that were determined to not be significant (i.e., other resources areas). Collectively, this information allows for the project to be compared against the merits of each alternative.

For each of the alternatives identified, the EIR conducted the following assessment:

- Described the alternative;
- Identified the impacts of the alternative and evaluated the significance of those impacts; and
- Evaluated each alternative relative to the proposed project, specifically addressing project objectives, avoidance or reduction of significant impacts, and comparative merits.

The EIR has specifically evaluated three (3) alternatives to the proposed project as follows:

1. No Project / No Redevelopment Alternative
2. No Project / Existing Community Plan and Zoning Alternative
3. Reduced Intensity Project Alternative – 312 Units

4.2 Criteria for Selection and Analysis of Alternatives

The criteria for the selection and analysis of alternatives are provided in CEQA Guidelines Section 15126.6(c). In order to be considered feasible, the alternatives must (1) meet most of the project objectives and (2) avoid or substantially lessen the significant impacts resulting from the proposed project (specifically, air quality, hazards and hazardous materials, noise and vibration and transportation and traffic).

4.2.1 Project Objectives

The following project objectives have been established by the County of San Diego (County) for the proposed project:

1. Establish the ability for residential developers to construct affordable homes on surplus County property, consistent with San Diego regional housing policies.
2. Deliver a development-ready site, including demolition and removal of existing onsite structures and related facilities, and provision of stubbed-out utilities.
3. Encourage an increase in the supply and variety of housing types – affordable for people of all ages and income levels – in an area with existing or planned frequent transit service (i.e., transit priority area) and with access to a variety of public and commercial services.

4. Ensure high quality development occurs on the site through the development of architectural and landscape supplemental development regulations.

4.2.2 Feasibility

CEQA Guidelines Section 15126.6(f)(1) identifies the factors to be taken into account to determine the feasibility of alternatives. The factors include site suitability; economic viability; availability of infrastructure; general plan consistency; other plans or regulatory limitations; jurisdictional boundaries; and whether the applicant can reasonably acquire, control, or otherwise have access to the alternative site. Not one of these factors establishes a fixed limit on the scope of reasonable alternatives. An alternative does not need to be considered if its environmental effects cannot be reasonably ascertained and if implementation of such an alternative is remote or speculative.

4.2.3 Evaluation of Significant Impacts

According to CEQA Guidelines Section 15126.6(b), the alternatives discussion should focus on those alternatives that, if implemented, could eliminate or reduce any of the significant environmental impacts of the project. The alternatives will be evaluated to determine if, as anticipated when selected as alternatives, they eliminate any significant adverse environmental effects or reduce them to a less-than-significant level. The project-related impacts addressed in this analysis are those that are identified as potentially significant prior to the incorporation or implementation of any mitigation measures.

The performance of the alternatives relative to the proposed project will be evaluated to determine the “comparative merits of the alternatives.” (CEQA Guidelines Section 15126.6(a)) This analysis will be based, in part, on a comparison to the proposed project’s impacts. It also will include a discussion of the relative feasibility of each alternative.

4.3 Rationale for the Selection of Alternatives

4.3.1 Alternatives Considered but Rejected

The following alternatives were considered but rejected due to either being infeasible, the County not controlling the property or not meeting most of the basic project objectives:

- **Alternative Site (Surplus County Owned Property) – San Diego County**

Eleven other County owned properties within the County were identified as “surplus” and proposed for affordable housing redevelopment (AECOM

2017a). The majority of the 11 sites are located within the City of San Diego, while one each are in the City of Escondido, City of El Cajon, and the County. A screening process was used to determine whether each site was conducive to affordable housing, including a land use and zoning analysis, environmental due diligence, screening criteria determination, and development opportunity identification. The development opportunity assessment took into consideration such factors as commercial/retail and public transit proximity and land use compatibility. The County's goal in evaluating its surplus properties for affordable housing redevelopment potential was to identify as many sites as possible that would be viable given the existing and projected regional housing shortfall for lower income individuals.

Of the 11 screened sites, only 5 of the sites were deemed viable for affordable housing, including the proposed project site (AECOM 2017b). None of the viable sites were determined to be an alternative location for the proposed project because they were less conducive than the Mount Etna site for near-term redevelopment, already planned for other land uses, were not currently available for lease, and/or were not located near commercial retail/office uses and within an existing or planned transit priority area (TPA) to serve the needs of future residents.

- **Alternative Site (Surplus County Owned Property) - Community Plan Area**

There were no other County owned surplus properties in the Clairemont Mesa Community Plan (CMCP) area that were evaluated as an alternative site for the proposed project. Of the 11 sites screened for their potential for redevelopment and the 5 sites that were recommended as viable, the only site in the Clairemont Mesa Community Plan area was the Mount Etna property. The other sites are located in the Midway District of the City of San Diego, downtown San Diego, City of El Cajon, and City of Escondido. Therefore, no other surplus County-owned property exists in the Community Plan area that could serve as a viable alternative location for the proposed project and such an alternative was not further evaluated in this analysis.

- **Proposed Clairemont Mesa Community Plan Update Land Use Designation**

The project site is located within Focus Area 6, Subarea 6C of the draft CMCP Update (City of San Diego 2019). The CMCP Update is a work in progress. The initial land use scenarios were released for public comment on February 13, 2019 as part of a broad online community engagement effort to solicit feedback on future development. The existing CMCP land use designation for the project site is Commercial-Community Center and there a limited number of residential units allowed. There are currently three potential land use designation options being studied in Subarea 6C

(13.1 total acres including the 4.09-acre project site): (1) Community Commercial (0-44 dwelling units per acre [du/ac]) – mixed use with 183 residential units, (2) Community Commercial (0-54 du/ac) – mixed use with 283 residential units, and (3) Community Commercial (0-73 du/ac) – mixed use with 347 residential units. These optional residential unit densities and unit counts apply to the entire 13.1-acre Subarea 6C, and as such it is difficult to determine the actual unit count that would be allowed on the 4.09-acre project site portion of the subarea. Using a straight percentage approach, 38 percent of the potential units could be allocated to the project site, under this alternative, resulting in either 70, 108 or 132 affordable residential units. In addition, a mix of uses besides residential would be allowed under the draft CMCP Update land use designations. As the CMCP Update is in work in progress with an undetermined final land use designation for the project site, and a substantially reduced number of possible residential units than the proposed project, the alternative is not further evaluated in the EIR because of its speculative nature.

- **Alternative Land Use**

During the NOP review period and public scoping process, a number of community members and interested parties suggested that the County entitle and permit development of the site for non-residential uses or specific types of residential development. For instance, suggestions were made to consider developing the site with a medical facility (i.e., County Health Department), community library, Department of Motor Vehicles facility, commercial business use, community park, recreation center, and dog park, among other uses. Suggestions were also made to consider senior-only housing or units for military members. Because of its commercial designation under the General Plan and CMCP, all of the suggested non-commercial alternative land uses or residential types would require an amendment of the CMCP and rezone of the site. Further, the suggested non-residential uses would likely not reduce any impacts of the proposed project. In addition, none of these suggested uses would meet the basic project objectives of amending the CMCP to allow for the future redevelopment of the site for affordable housing. In addition, uses such as a dog park would not benefit from being implemented in a TPA because they are not high-trip generating uses nor would they increase the supply and variety of housing types in the County and City. Thus, an alternative land use scenario is not further evaluated in the EIR.

4.4 No Project / No Redevelopment Alternative

4.4.1 No Project / No Redevelopment Alternative Description and Setting

The No Project/No Redevelopment Alternative would not require a Community Plan Amendment (CPA) and rezone from the City of San Diego and the existing vacated San Diego County Regional Crime Lab (Crime Lab) facility would remain

on the project site. None of the proposed building demolition (i.e., 103,500 square feet [SF]) would occur and the project site would not be graded to prepare a developable pad. Affordable housing would not ultimately be constructed under this alternative, further exacerbating the lack of affordable housing in the San Diego County region. The existing structures would remain unoccupied. Alternatively, implementation of the existing land use and underlying zoning is addressed under Section 4.3.

4.4.2 Relationship to Project Objectives

The No Project / No Redevelopment Alternative does not meet any of the project objectives. Specifically, this alternative would not amend the land use or change the zoning to allow for the future development of affordable housing units; would not expand the range of housing available within the San Diego County region in a TPA; would not deliver a graded and improved site for future development; would not ensure high quality development occurs on the site through site-specific development regulations; and would not increase mobility for pedestrians or improve site access.

4.4.3 Comparison of Effects of Alternative to the Proposed Project

4.4.3.1 Air Quality

Under the No Project / No Redevelopment Alternative, none of the construction phase or operational pollutant emissions attributable to approving and implementing the proposed project would be generated. Elimination of these emissions would not avoid or lessen a significant impact since none were identified for the proposed project, as described in Section 2.2, Air Quality, of this EIR. However, construction-related health risk impacts (i.e., maximum incremental increase in risk) for residential receptors in the project area would be avoided by the No Project / No Redevelopment Alternative. Significant air quality impacts of the project would not occur and no air quality mitigation would be required under this alternative.

4.4.3.2 Hazards and Hazardous Materials

Because site demolition and preparation would not occur under this alternative, project impacts related to the handling of hazardous materials, such as asbestos and lead materials, within a quarter-mile of a school would be avoided and there would be no need for mitigation. In addition, project impacts to public health due to the proposed removal of the underground storage tank (UST) and potential to encounter contaminated media would not occur. The No Project / No Redevelopment Alternative would avoid potentially significant impacts related to being located on a site which is included on a list of hazardous materials site compiled pursuant to Government Code Section 65962.5. Significant impacts

would not occur and no hazards or hazardous materials mitigation would be required under this alternative.

4.4.3.3 Noise and Vibration

Project construction would result in potentially significant impacts to nearby sensitive receptors, the impacts of which would be avoided by this alternative. No construction equipment noise would be produced because no redevelopment of the project site would occur. The buildings would continue to be vacant and no operational noise would be produced under this alternative. Significant impacts would not occur, and no noise mitigation would be required under this alternative.

4.4.3.4 Transportation and Traffic

Under the No Project / No Redevelopment Alternative, operational traffic associated with the proposed project would not be produced and Existing, Near-term or Long-term traffic conditions on the roadway network surrounding the project site. No additional traffic would be generated by this site in the future since the existing facility would remain vacant. Therefore, significant and unavoidable project impacts to roadway segments and intersections in the Clairemont Mesa community would be avoided and no mitigation would be required under this alternative. No impacts related to traffic hazards and vehicle miles travelled (VMT) would occur under this alternative.

4.4.3.5 Other Less than Significant Resource Topics

Because the No Project / No Redevelopment Alternative would not result in any changes to the project site and the existing vacant Crime Lab facility would remain, even the project impacts that would be less than significant would not occur. Thus, no impacts to aesthetics, biological resources, agriculture and forestry resources, cultural resources, energy, geology/soils/seismicity, greenhouse gas emissions, hydrology, mineral resources, population and housing, recreation, public services, utilities, tribal cultural resources, land use and planning and wildfire would be expected under this alternative.

4.5 No Project / Existing Community Plan and Zoning Alternative

4.5.1 No Project / Existing Community Plan and Zoning Description and Setting

The No Project / Existing Community Plan and Zoning alternative would not require a CPA and rezone and the existing vacated Crime Lab facility would be demolished and the site sheet graded to prepare for future commercial development. Land uses permitted under the Commercial-Community Center designation include shopping areas with retail, service, civic, and offices uses for the community at large. Specifically, the project site is currently zoned

Commercial Office (CO-1-2) which is to provide employment uses with limited, complementary retail uses and residential uses as specified, and is intended to apply in large-scale activity centers or in specialized areas where a full range of commercial activities is not desirable (SDMC Section 131.0504). Under this alternative, the project site would be available for sale to a developer for the construction of a commercial office development. This alternative would allow for the future construction of up to 70,000 SF of commercial office development, specifically as medical office use, with supporting retail space, as permitted by the development regulations for the CO-1-2 zone. Any future redevelopment of the project site would undergo review by City staff for compliance with the CMCP Community Core CPIOZ B requirements related to architectural/site design, parking design, landscaping, signage and pedestrian/bicycle circulation. Buildings would be limited to 30 feet in height in accordance with the overlay zone in the CMCP.

4.5.2 Relationship to Project Objectives

The No Project / Existing Community Plan and Zoning Alternative would not meet the basic project objectives. Specifically, this alternative would not amend the site's land use or change the zone to allow for the future development of affordable housing units and would not expand the range of housing available within the San Diego County region in a TPA. The project site could be made development-ready, including demolition and removal of existing onsite structures and related facilities; however, commercial office use would not fulfill the regional housing goals to construct more affordable residential housing, which would be non-existent under this alternative.

4.5.3 Comparison of Effects of Alternative to the Proposed Project

4.5.3.1 Air Quality

Under the No Project / Existing Community Plan and Zoning Alternative, similar construction phase or operational pollutant emissions attributable to approving and implementing the proposed project would be generated. While implementation of this alternative would not require changes to land use or zoning, redevelopment of the site with commercial office uses (with limited retail and residential), as permitted under the CMCP and SDMC, would still require site demolition and preparation activities using heavy construction equipment. Even if the existing structures were reused, there would be a need to improve the site to current architectural, landscaping, parking and lighting standards in compliance with the requirements of the Land Development Code. Emissions associated with those construction activities would, however, be less than those anticipated for the proposed project since a lower-stature structure would likely be constructed due to the 30-foot height limit that exists throughout most of the CMCP area. Because the impacts of the project would not exceed stated thresholds and less

construction would be involved with this alternative, less than significant impacts similar to the proposed project would be expected. Construction-related health risk impacts (i.e., maximum incremental increase in risk) for residential receptors in the project area would not be avoided by the No Project / Existing Community Plan and Zoning Alternative because of the need for heavy equipment to redevelop the site with a commercial office uses. As such, significant air quality impacts would still occur and air quality mitigation (Mitigation Measure AIR-1) would be required under this alternative.

4.5.3.2 Hazards and Hazardous Materials

Project impacts related to the handling of hazardous materials, such as asbestos and lead materials, within a quarter-mile of a school would not be avoided because implementation of the existing land use and zoning would lead to redevelopment of the project site with commercial office uses. In addition, project impacts to public health would not be avoided due to the proposed removal of the UST and potential to encounter contaminated media because the site is included on a list of hazardous materials site compiled pursuant to Government Code Section 65962.5. The same significant impacts associated with the project would occur and hazards or hazardous materials mitigation (Mitigation Measure HAZ-1) would be required under this alternative.

4.5.3.3 Noise and Vibration

Project construction would result in potentially significant impacts to nearby sensitive receptors, the impacts of which would not be avoided by this alternative due to the site preparation, demolition and building construction that would occur. Construction equipment noise would be produced during redevelopment of the project site. Operational noise would also be produced by this alternative related to stationary equipment and traffic activity, although less than significant impacts would be similar to the proposed project. Therefore, significant impacts would occur and noise mitigation (Mitigation Measure NOI-1) would be required under this alternative.

4.5.3.4 Transportation and Traffic

Under the No Project / Existing Community Plan and Zoning Alternative, operational traffic associated with the proposed project would still be produced which would cause impacts to Existing, Near-term or long-term traffic conditions on the roadway network surrounding the project site. Assuming up to 70,000 SF of medical office space would be developed on site, this alternative would generate 3,395 daily trips (including a 3 percent transit reduction). **Table 4-1** shows of the trip generation associated with the No Project/Existing Community Plan and Zoning Alternative based on the City's trip generation manual. This alternative would increase the project's total ADT by 1,377 and increase AM

peak hour trips by 60, while PM peak hour trips would increase by 174, as compared to the proposed project. Therefore, significant and unavoidable project impacts to roadway segments and intersections in the Clairemont Mesa community would increase and mitigation (Mitigation Measures TRA-1 through TRA-3) would still be required under this alternative to mitigate for the project’s direct impacts. Less than significant impacts related to traffic hazards and vehicle miles travelled (VMT) would occur under this alternative because access points would be constructed in accordance with the City’s Street Design Manual and the project would still be located in a TPA.

**Table 4-1
Trip Generation – No Project/Existing Community Plan and Zoning Alternative**

Land Use	Units	Trip Rate	% Daily	ADT	AM Peak Hour				PM Peak Hour					
					%	Trips	Split	In	Out	%	Trips	Split	In	Out
Office- Medical Office	70 ksf	50/ ksf	-	3,500	6%	210	(8:2)	168	42	10%	350	(7:3)	105	245
Office Reduction due to Transit Stations*	-	-	3%	-105	5.5%	-12		-9	-3	2%	-7		-2	-5
Total				3,395		198		159	39		343		103	240

Source: Chen-Ryan 2019

Notes:

* Trip reductions applied per the City of San Diego Traffic Impact Study Manual (July 1998)

** Trip generation developed using methods in City of San Diego Land Use Code – Trip Generation Manual (May 2003)

4.5.3.5 Other Less than Significant Resource Topics

Because the No Project / Existing Community Plan and Zoning Alternative would not result in any changes to the planned land use for the project site and the existing vacant Crime Lab facility would be redeveloped with commercial office uses, project impacts would occur and continue to be less than significant. Thus, less than significant impacts to aesthetics, biological resources, agriculture and forestry resources, cultural resources, energy, geology/soils/seismicity, greenhouse gas emissions, hydrology, mineral resources, population and housing, recreation, public services, utilities, tribal cultural resources, land use and planning and wildfire would be expected under this alternative.

4.6 Reduced Intensity Project Alternative

4.6.1 Reduced Intensity Project Alternative Description and Setting

The Reduced Intensity Project Alternative would result in the same CPA and zone change as the proposed project and the existing vacated Crime Lab facility

would be demolished. Under this alternative, the project site would be entitled for the construction of a 312-unit affordable housing project, which would house approximately 633 people. This alternative was developed to reduce the proposed project's direct traffic impacts on roadway segments or intersections by decreasing the unit count to a point where at least one traffic impact would be reduced to less than significant. Reducing units would reduce both the volume of daily trips generated by the site and the number of peak hour trips occurring during the most impacted periods of the day. Under this alternative the permitted unit count would be reduced from 404 units to 312 units. All other aspects of the project would remain the same as the proposed, except that the required amount of parking would be reduced to reflect the lower number of residents.

4.6.2 Relationship to Project Objectives

The Reduced Intensity Project Alternative would meet many of the basic project objectives. Specifically, this alternative would amend the land use or change the zone to allow for the future development of affordable housing units; would expand the range of housing available within the region in a TPA; and would ensure high quality development occurs on the site through site-specific development regulations. The project site could be made development-ready, including demolition and removal of existing onsite structures and related facilities; however, this alternative would not provide as much housing supply (i.e., 92 less affordable units) as the proposed project, effectively conflicting with County and City policies maximize affordable housing supply in response to the regional housing crisis.

4.6.3 Comparison of Effects of Alternative with the Proposed Project

4.6.3.1 Air Quality

Under the Reduced Intensity Project Alternative, similar construction phase or operational pollutant emissions attributable to approving and implementing the proposed project would be generated. Redevelopment of the site with residential development, as permitted under the amended CMCP and SDMC, would require site demolition and preparation activities using heavy construction equipment similar to those associated with the proposed project. Emissions associated with those construction activities could, however, be less than those anticipated for the proposed project since a lower-stature structure would likely be constructed due to the unit reduction. Because the impacts of the project would not exceed stated thresholds and less construction would be involved, this alternative would also have less than significant impacts similar to the proposed project. Construction-related health risk impacts (i.e., maximum incremental increase in risk) for residential receptors in the project area would not be avoided by the Reduced Intensity Project Alternative because of the need for heavy equipment to redevelop the site with residences. As such, significant air quality impacts of

the project would still occur and air quality mitigation (Mitigation Measure AIR-1) would be required under this alternative.

4.6.3.2 Hazards and Hazardous Materials

Project impacts related to the handling of hazardous materials, such as asbestos and lead materials, within a quarter-mile of a school would not be avoided because implementation of the alternative would lead to redevelopment of the project site with residential use. In addition, project impacts to public health due to the proposed removal of the UST and potential to encounter contaminated media because the site is included on a list of hazardous materials site compiled pursuant to Government Code Section 65962.5. The same significant impacts associated with the project would occur and hazards or hazardous materials mitigation (Mitigation Measure HAZ-1) would be required under this alternative.

4.6.3.3 Noise and Vibration

Project construction would result in potentially significant impacts to nearby sensitive receptors, the impacts of which would not be avoided by this alternative due to the site preparation, demolition and building construction that would occur. Construction equipment noise would be produced during redevelopment of the project site and would have the potential to expose nearby sensitive receptors to noise in excess of the City's thresholds. Operational noise would also be produced by this alternative related to stationary equipment and traffic activity. The reduction in trips under this alternative would not appreciably reduce traffic-related noise. Therefore, significant impacts would occur and noise mitigation (Mitigation Measure NOI-1) would be required under this alternative.

4.6.3.4 Transportation and Traffic

Under the Reduced Intensity Project Alternative, operational traffic associated with the proposed project would still be produced which would cause significant impacts to Existing, Near-term or Cumulative plus Project traffic conditions on the roadway network surrounding the project site. However, the reduced trip generation and peak hour traffic would lessen project impacts on area intersections and would avoid a cumulatively significant roadway segment impact along Balboa Avenue between its intersections with Charger Boulevard and the Interstate 805 (I-805) southbound ramps. **Table 4-2** shows a comparison of the project impacts with those of the Reduced Intensity Project Alternative along the Balboa Avenue roadway segment significantly impacted by the proposed project.

**Table 4-2
Roadway Segment Impact – Reduced Project Intensity Alternative**

Roadway	Segment	Roadway Classification	LOS E Threshold	Project Trip Assignment										
				Total Project Trip Generation ADT	Project Trip Distribution	Project Trip Assessment ADT	Existing Conditions			Existing Plus Project				
Balboa Avenue	Charger Blvd & I-805 South-bound Ramps	6-Lane Major Arterial	50,000	1,558	32%	499	Existing Conditions			Existing Plus Project				
							Base ADT	V/C	LOS	Ex + P ADT	V/C	LOS	Δ	S?
							61,846	1.237	F	62,345	1.247	F	0.010	No
							Near Term			Near Term Plus Project				
							Base ADT	V/C	LOS	NT + P ADT	V/C	LOS	Δ	S?
							63,430	1.269	F	63,929	1.279	F	0.010	No
							Cumulative			Cumulative Plus Project				
							Base ADT	V/C	LOS	Hz + P ADT	V/C	LOS	Δ	S?
							65,200	1.304	F	65,699	1.314	F	0.010	No

Notes:

S? = Significant impact?

* Connecting intersections (i.e. Balboa Ave/Charger Blvd and Balboa Ave/I-805 SB Ramps) operate at LOS D or better; therefore, the roadway segment is not considered to have a significant impact

Source: Chen Ryan 2019

As shown in the table, significant and unavoidable project impacts to one segment of Balboa Avenue in the Clairemont Mesa community in the Near-term plus Project and Cumulative plus Project scenarios (i.e., under all three access options) would be avoided by this alternative. However, significant and unavoidable direct impacts to another segment of Balboa Avenue, between Cannington and Charger, and cumulative impacts to the Mount Etna Drive roadway segment, between Mount Everest Boulevard and Genesee Avenue, would be reduced but not eliminated by this alternative. In addition, direct impacts to intersections would be lessened but not avoided and mitigation (Mitigation Measures TRA-1 through TRA-3) would still be required under this alternative, while cumulative impacts to intersections would remain significant and unavoidable because the mitigation cannot be assured (Mitigation Measures TRA-4 and TRA-5). Less than significant impacts related to traffic hazards, VMT and other circulation topics would still occur under this alternative because access points would be constructed in accordance with the City's Street Design Manual and the project would still be located in a TPA.

4.6.3.5 Other Less than Significant Resource Topics

Because the Reduced Intensity Project Alternative would result in changes to the planned land use for the project site to allow for future residential development and the existing vacant Crime Lab facility would be redeveloped, project impacts would occur. Thus, less than significant impacts to aesthetics, biological resources, agriculture and forestry resources, cultural resources, energy, geology/soils/seismicity, greenhouse gas emissions, hydrology, mineral resources, population and housing, recreation, public services, utilities, tribal cultural resources, land use and planning and wildfire would be expected under this alternative.

4.7 Summary of Alternatives

A summary of impacts of the alternatives compared to the proposed project is included in **Table 4-3**, pursuant to CEQA Guidelines Section 15126.6(d).

**Table 4-3
Comparison of Alternatives to the Proposed Project**

Issue Area	Proposed Project Impacts	No Project / No Redevelopment Alternative	No Project/ Existing Community Plan and Zoning Alternative	Reduced Intensity Project Alternative
2.1 Air Quality	SM	LTS	SM(-)	SM
2.2 Hazards and Hazardous Materials	SM	LTS	SM	SM
2.3 Noise and Vibration	SM	LTS	SM	SM
2.4 Transportation and Traffic	SU	LTS	SU(+)	SU(-)

LTS = Less than significant
SM = Significant and mitigated
SU = Significant and unavoidable
(-) Impacts would be less than those of the proposed project
(+) Impacts would be greater than those of the proposed project

4.8 Environmentally Superior Alternative

CEQA Guidelines Section 15126.6(a) states that an EIR shall describe a range of reasonable alternatives. As evaluated in Chapter 2.0 of this EIR, the significant impacts of the proposed project would affect air quality (construction air toxic emissions); hazards and hazardous materials (USTs and asbestos/lead materials); noise (construction equipment noise); and transportation and traffic (roadway segment and intersection operations). As it would substantially lessen impacts to each of these issue topics to a less than significant level, the No Project Alternative / No Redevelopment Alternative would be the environmentally superior alternative.

However, CEQA Guidelines Section 15126.6(e)(2) also states that if the environmentally superior alternative is the “no project” alternative, the EIR shall also identify an environmentally superior alternative from among the other alternatives. The Reduced Intensity Project Alternative would be the environmentally superior alternative from the remaining alternatives, as it would reduce vehicle trips and avoid significant and unavoidable traffic impacts associated with the proposed project at one roadway segment location in the study area, and it would meet many of the basic project objectives.

This page intentionally left blank

CHAPTER 5.0 OTHER CEQA CONSIDERATIONS

This chapter presents the evaluation of other types of environmental impacts required by the California Environmental Quality Act (CEQA) that are not covered within the other chapters of this Environmental Impact Report (EIR). The other CEQA considerations include growth-inducing impacts, environmental effects that were found not to be significant, significant irreversible environmental changes that would be caused by the proposed project, and significant and unavoidable adverse impacts.

5.1 Growth-Inducing Impacts

Pursuant to Section 15126.2(e) of the CEQA Guidelines, an EIR must address whether a project will directly or indirectly foster growth. Section 15126.2(e) reads as follows:

[An EIR shall] discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects which would remove obstacles to population growth (a major expansion of a wastewater treatment plant might, for example, allow for more construction in service areas). Increases in population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. Also discuss the characteristic of some projects which may encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

A project's potential to induce growth does not automatically mean that it will result in growth. The potential for growth is affected by local government regulations including land use plans and policies and zoning ordinances. Growth occurs through capital investment in new economic opportunities from both public and private entities. The nature of the resulting growth (i.e., the location, size and type of the development) is also typically the result of numerous factors including local government planning, availability of public services, natural resources, economic conditions as well as local political and environmental concerns. Consequently, these factors can have an important role in determining the extent of a project's potential growth-inducing impacts.

Typically, the growth-inducing potential of a project would be considered significant if it stimulates human population growth or a population concentration above what is assumed in local and regional land use plans, or in projections

made by regional planning authorities. Significant growth potential could also occur if the project provides infrastructure or service capacity to accommodate growth levels beyond those permitted by local or regional plans and policies. As discussed below, this analysis evaluates whether the proposed project would directly or indirectly induce economic, population, or housing growth in the surrounding environment.

5.1.1 Direct Growth Inducing Impacts to the Surrounding Environment

The proposed project would amend the Clairemont Mesa Community Plan and rezone the project site to allow for a future residential development on the project site, with a maximum of 404 units. While the future development could propose a reduced number of units, for the purposes of CEQA the following analysis evaluates the conservative scenario of full buildout allowed under the proposed amendments to the Community Plan and zone change.

The potential for growth inducement can be measured through the evaluation of the proposed project's consistency with regional growth projections. As described in Section 3.4, Land Use, and Section 3.5, Population and Housing, of this EIR, San Diego Association of Governments (SANDAG) policies concerning regional growth inducement anticipate growth in the Clairemont Mesa community. As analyzed in Section 3.5, Population and Housing, the population growth in the community of Clairemont Mesa is forecasted to increase by 16.5 percent from 81,498 residents in 2020 to 94,965 residents in 2050 (SANDAG 2013). Using the Clairemont Mesa community's average multi-family person per household of 2.05 people, and a maximum buildout of 404 units, the project has the potential to generate an additional 829 people in the Clairemont Mesa community, which would represent 6.2 percent of 13,467 future residents anticipated in Clairemont Mesa. Therefore, the community planned for and could accommodate the anticipated increases in population and housing associated with the proposed project.

Further, a project could directly induce growth if it would remove barriers to population growth, such as a change to a jurisdiction's general plan and/or zoning ordinance that allows new residential development to occur. The proposed project seeks to amend the Clairemont Mesa Community Plan as well as rezone the project site to allow for the development of up to 404 new residential units. The existing land use designation for the project site, as detailed in Chapter 1.0, Project Description, of this EIR, is Commercial Office (CO-1-2). The CO zone permits employment uses, with limited complementary retail uses and residential uses as specified and is intended to apply in large-scale activity centers or in specialized areas where a full range of commercial activities is not desirable (San Diego Municipal Code [SDMC] Section 131.0504). The CO-1-2 zone is intended to accommodate a mix of office and residential uses that serve

as an employment center and permits a maximum density of one dwelling unit for each 1,500 square feet (SF) of lot area. Under the proposed project, the site would be re-designated to Residential-High (45-73 du/ac) and rezoned as Residential – Multiple Units (RM-3-9). The Community Plan Implementation Overlay Zone (CPIOZ) Type A (CPIOZ-A) supplemental development regulations would be consistent with the general intent of the RM-3-9 zone as modified by the regulations contained in Appendix B.

In order to support the proposed 404 residential units proposed for the future development, maintenance personnel and property management staff would be needed during operation of the future development. However, such use would generate a relatively small number of employees and would not support a large employment staff. In addition, it is anticipated that the majority of the employees would be drawn from within the region's existing employment base and would not require new workers to move to the project area. Therefore, the proposed project would not draw new residents to the area looking for new employment opportunities and as such, would not induce unplanned population growth.

Other employment opportunities resulting from the proposed project would include employment of temporary construction workers during demolition and site preparation and during construction of the future development. In addition, maintenance personnel and property management staff would be needed during project operation. Many of these employees are already present in the region and living in San Diego, and the proposed project would not need to recruit substantial numbers of new employees living elsewhere to the region. Demolition and construction of the proposed project would not cause unplanned population growth as the workforce already exists in the region. In addition, the proposed project is located in an urbanized area and is adequately served by the existing infrastructure.

5.1.2 Indirect Growth Inducing Impacts to the Surrounding Environment

A project would indirectly induce growth if it would increase the capacity of infrastructure in an area in which the public service currently meets demand. Examples include increasing the capacity of local utilities or proposing roadway improvements beyond those needed to meet existing demand.

The proposed project could potentially induce indirect population growth through the creation of jobs and increased residential opportunities. However, as described above and in Section 3.5, Population and Housing, this growth is consistent with SANDAG's projections for local and regional growth. As described within Section 2.4, Traffic and Transportation, and Section 3.8, Utilities and Service Systems, the proposed project would not increase the city's infrastructure to service the proposed project nor would it include roadway improvements. Furthermore, the proposed project would not result in a need for

new public facilities or utilities, as discussed in Section 3.6, Public Services and Section 3.8, Utilities and Service Systems. Police and fire protection services, parks, water infrastructure, and wastewater systems are all sufficient to serve the project site and would not necessitate expansions or improvements that would remove barriers to additional future growth. Therefore, the proposed project would not result in substantial indirect growth inducement.

5.2 Environmental Effects Found Not to Be Significant

CEQA Guidelines Section 15128 requires an EIR to “contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and therefore were not discussed in detail in the EIR.” This section discusses those issue areas that were determined not to be significant.

5.2.1 Agricultural and Forestry Resources

According to the California Department of Conservation’s San Diego County Important Farmland map, the project site is classified as “Urban and Built-Up Land,” which does not contain any agricultural uses or areas designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (California Department of Conservation 2016). Additionally, according to the City of San Diego’s General Plan and SDMC, the project site is not designated as forest land (City of San Diego 2015, City of San Diego 2019). Therefore, the proposed project would not convert farmland to a non-agricultural use, and no impact to agricultural resources would occur.

5.2.2 Biological Resources

The project site is fully developed and located in the urbanized community of Clairemont Mesa. The project site contains the former San Diego County Regional Crime Lab (Crime Lab) buildings, associated parking, and minimal ornamental landscaping. Due to the developed nature of the project site, it does not support any candidate, sensitive, or special species. The surrounding area is also void of any native habitats, with the closest open space and recreational areas being Tecolote Canyon, approximately one mile east of the project site, and Marian Bear Memorial Park, approximately 1.75 miles north of the project site. Therefore, implementation of the proposed project would not have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species or any riparian habitat or other sensitive natural community in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

Additionally, there are no state or federally protected wetlands within the project vicinity. Therefore, the proposed project would not have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

The project site does not contain any waterways or state and/or federally protected habitats, and, due to the project site and vicinity's developed nature, does not serve as a wildlife movement corridor. Therefore, the proposed project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

The project site is not located in an area subject to an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other such plans. Additionally, the proposed project would comply with all applicable policies or ordinance aimed at protecting biological resources. Therefore, the proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and would not conflict with an applicable biological resources conservation plan.

5.2.3 Cultural Resources

The project site is currently developed with the former Crime Lab buildings, associated parking, and minimal ornamental landscaping. Prior to being used as the Crime Lab, the existing buildings were constructed as the Clairemont General Hospital in 1961 (Ninyo & Moore 2019). Since the existing buildings are over 50 years old, the structures on the project site have the potential to be considered a historical resource if they meet any of the criteria listed in section 15064.5 of the CEQA Guidelines. In accordance with Section 15064.5 of the CEQA Guidelines, a resource generally shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code Section 5024.1, Title 14 CCR, Section 4852) including the following:

- A. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- B. Is associated with the lives of persons important in our past;
- C. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- D. Has yielded, or may be likely to yield, information important in prehistory or history.

While the buildings were used as the Clairemont General Hospital and the Crime Lab, the buildings are not associated with events that significantly contributed to the history of California or the local area. Furthermore, the buildings themselves do not provide context or information for a particular time period as the buildings have an architecture style of a generic office building, which lacks artistic value and is consistent with surrounding office buildings. Therefore, the existing buildings would not meet Criterion A or D. The buildings are currently one- to two-story structures with limited architectural design features and have a visual character that is similar to other office buildings in the area. Furthermore, the buildings do not portray a specific design aesthetic that is of a particular time period and is not associated with the lives of historically important persons, such as a prominent architecture. Therefore, the existing buildings do not meet Criterion B or C. Because the existing buildings would not meet any of the criteria listed above, the buildings would not be eligible for designation as a historical resource. Therefore, demolition of the existing buildings would not cause an adverse effect to a historical resource.

Additionally, implementation of the proposed project would allow for the development of a future development, through the CPA and rezone, and the demolition of the existing unoccupied buildings and related facilities on-site. Site preparation activities would involve ground-disturbing activities, which have the potential to encounter unknown buried historic and archaeological resources. The project area is underlain by Chesterton-Urban land complex soil type, which is primarily composed of sandy loam and artificial fill materials (USDA 2019). Because of the underlying soil type and the previous disturbance conducted on the site during prior development activities, the likelihood of encountering archaeological resources or human remains during project implementation is considered to be very low. However, there is a possibility, though extremely slight, that human remains could be encountered during ground-disturbing activities. Regardless, if human remains were identified, provisions of PRC Section 5097.98 would apply, whereby the San Diego County Coroner would be contacted, as well as provisions of Health and Safety Code Section 7050.5, which require that, if the remains are determined to be Native American, the County Coroner would notify the Native American Heritage Commission (NAHC) in accordance with Health and Safety Code Section 7050.5, subdivision (c), and PRC Section 5097.98 (as amended by Assembly Bill 2641). The NAHC would designate a Most Likely Descendant for the remains per PRC Section 5097.98. Because the likelihood of encountering human remains is extremely low, and because any such discovery would be covered under existing state law, the potential impact to human remains would be less than significant.

5.2.4 Geology, Soils, and Seismicity

Similar to all of southern California, the project site is in a known seismically active region where the potential of seismic hazards exists. According to the California Department of Conservation's Map Data Viewer, the project site is not located on an Alquist-Priolo Earthquake Fault Zone (California Department of Conservation 2019). The nearest Alquist-Priolo Fault is the Rose Canyon Fault, which is located approximately 2.3 miles west of the project site. Therefore, there is not a risk of fault rupture of a known Alquist-Priolo fault on the project site.

Additionally, all of San Diego County, including the project site, is located within Seismic Zone 4 (Section 1629.4.1 of the California Building Code [CBC]), which is the highest seismic zone, and is subject to ground shaking. A seismic event on the Rose Canyon Fault could cause significant ground shaking on the project site. Construction of the future development would be required to comply with all applicable seismic-safety development requirements. Therefore, conformance with development standards during construction of the future development would minimize seismic ground shaking effects in the event of a major earthquake and ensure that the potential seismic or geologic hazard impacts are not significant.

The entire project site has been previously graded and disturbed during construction of the existing buildings. The project site is underlain by Chesterton-Urban land complex soil type, which is primarily composed of sandy loam and fill materials (USDA 2019). Construction activities would include ground disturbance, however, given the shallow depth of earthwork required and the site's relatively level topography, rapid storm water runoff would be limited, and would not exacerbate erosion potential. Furthermore, all construction activities, including site demolition and preparation and construction of the future development, would comply with applicable erosion-control regulations, such as the National Pollution Discharge Elimination System, which would require site-specific measures to minimize erosion off-site. Therefore, impacts related to soil erosion would be less than significant.

According to the City's General Plan, the project site is designated as having a nominal to low risk for geologic hazards, including liquefaction (City of San Diego 2008a). Additionally, the project site is relatively flat with no surrounding slopes and as such, there is no potential for landslides onsite. As such, the proposed project would not cause potentially substantial adverse effects related to liquefaction or landslides, and impacts would be less than significant.

Expansive soils are fine-grained soils (generally high-plasticity clays) that can undergo a significant increase in volume with an increase in water content and a significant decrease in volume with a decrease in water content. Changes in the water content of an expansive soil can result in severe distress to structures constructed upon the soil. As mentioned above, the project site is underlain by

Chesterton-Urban land complex soil type, which is primarily composed of sandy loam and fill materials (USDA 2019). Based on the underlying soil types, the project site generally has a very low to low expansion potential, and liquefaction is unlikely to occur on site. Therefore, impacts associated with expansive soils would be less than significant.

Paleontological resources (fossils) are the remains and/or traces of prehistoric plant and animal life exclusive to human remains or artifacts. Fossil remains such as bones, teeth, shells, and wood are found in the geologic deposits (rock formations) in which they were originally buried. According to the City's General Plan EIR, the Clairemont Mesa community is located on the Scripps Formation and Ardath Shale Formation, both which have high paleontological resource sensitivity (City of San Diego 2007). Construction activities would involve ground-disturbing activities, however, the depth of grading is anticipated to be relatively limited as only sheet grading for drainage purposes would be required. In addition, because of the previous disturbance conducted on the site during prior development activities, the likelihood of encountering fossils during project implementation is considered to be low. Therefore, impacts related to paleontological resources would be considered less than significant.

5.2.5 Hydrology

Implementation of the proposed project would include the demolition of the existing unoccupied buildings and related facilities on-site, and allow for the construction of a future development. Other site preparation activities would include the disposal of the demolition debris, and limited grading of the site in preparation for future development. During demolition and site preparation activities and during construction of the future development, exposed soil could temporarily increase the amount of sediment in runoff, which would enter the existing storm drain system. The proposed project would be required to obtain and comply with the Construction General Permit from the State Water Resources Control Board (SWRCB). Stormwater best management practices (BMPs) would be required to limit erosion, minimize sedimentation, and control stormwater runoff water quality during construction activities. It is assumed that the limits of disturbance for the proposed project would require a Stormwater Pollution Prevention Plan (SWPPP). Compliance under the Construction General Permit and SWPPP would ensure that construction activities would not degrade the surface water quality of receiving waters to levels that would be below the standards that are considered acceptable by the San Diego Regional Water Quality Control Board (RWQCB) or other regulatory agencies.

Upon completion of construction of the future development, the project site would be developed and landscaped, where any additional BMPs would be incorporated to minimize discharge of pollutants into the existing municipal storm

drain system. The amount of stormwater runoff, and surface or ground water quality from the project site would not change substantially from existing conditions after construction of the future development. Therefore, the proposed project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Impacts would be less than significant.

The proposed project would allow for the construction of a future development within an existing site that is currently developed. After the completion of construction of the future development, the amount of impervious surfaces onsite would remain similar to the existing conditions, and ground surface would be restored similar to existing conditions. Drainage within the project site would continue to be serviced by the existing storm drain system. Additionally, no stream or river courses exist within the site vicinity that could be affected by the proposed project. Therefore, impacts on the existing drainage pattern regarding siltation or erosion and surface runoff on- or off-site would be less than significant.

5.2.6 Land Use and Planning

The project's potential for significant land use impacts related to Issues 1 through 6 (consistency with adopted land use designations, conflict with local plans, and construction in a flood hazard area) are addressed in Section 3.4, Land Use and Planning. The following discussion is focused on those land use effects of the proposed project that have no potential for a significant impact.

The proposed project would allow for the construction of a future development on the project site. The project site is surrounded by existing residential and commercial land uses and currently developed with existing buildings. Development enabled by the project would be built on a parcel where urban land development is already allowed and would connect with the surrounding parcels and land uses. Furthermore, no additional roadways or other linear features would be constructed as part of the project. Therefore, the development enabled by the project would not physically divide an established community and no impact would occur.

5.2.7 Mineral Resources

According to the Conservation Element of the City's General Plan, the project site is located in an area designated as a mineral resource zone (MRZ-) 3 (City of San Diego 2008b). MRZ-3 areas are considered areas containing mineral deposits, the significance of which cannot be evaluated from available data. While the site is classified MRZ-3, the project site is not currently designated for mineral extraction or for future mineral extraction activities and is not suitable for mineral extraction as it is located in an urban, developed setting. Therefore,

implementation of the project would not result in the loss of available mineral resources or a locally-important mineral resource recovery site, and no impact would occur.

5.2.8 Population and Housing

The project's potential for significant population and housing impacts related to Issue 1 (substantial unplanned population growth) is addressed in Section 3.5, Population and Housing. The following discussion is focused on those population and housing effects of the proposed project that have no potential for a significant impact.

The project site is currently developed with existing buildings that were formerly used as the Crime Lab, which did not support residential use. Therefore, the proposed project would not displace people or require replacement housing elsewhere. Furthermore, the project would allow for the development of up to 404 additional residential units in the City. Therefore, no impact would occur regarding the displacement of existing people or housing, necessitating the construction of replacement housing elsewhere.

5.2.9 Tribal Cultural Resources

The County, as lead agency, initiated tribal consultation in accordance with Assembly Bill (AB) 52 and Senate Bill (SB) 18 for the proposed project (Appendix J). Consultation was initiated on September 28, 2018 and concluded on December 28, 2018. No tribes have requested consultation with the County for the project. Implementation of the proposed project would include the demolition of the existing unoccupied buildings and related facilities on-site, and allow for construction a future development. Other site preparation activities would include the disposal of the demolition debris, and mass grading of the site in preparation for residential construction. Site preparation activities would involve ground-disturbing activities, which have the potential to encounter unknown buried archaeological resources. However, since the project site has been previously graded, ground-disturbing activities associated with the project is expected to encounter artificial fill and is not anticipated to reach native soils. Furthermore, the depth of grading is anticipated to be relatively limited as only sheet grading for drainage purposes would be required. As such, the project area would have an extremely low potential for the presence of archaeological resources, which could be considered tribal cultural resources. Therefore, the proposed project would have no impact on tribal cultural resources.

5.2.10 Wildfire

The project site is located in an urban, developed setting where the majority of vegetation in the area consists of ornamental landscaping. The project site is

relatively flat with no surrounding slopes and is bounded by residential and commercial land uses and roadways. While the nearest wildland area is located approximately 0.75-miles to the west of the project site, the area between the project site and the wildland area is fully developed with no substantial vegetation areas which could aid in the spread of wildfire. Therefore, the potential for a wildland fire to occur at the project site is considered to be very low. In addition, the project would be designed to comply with all development standards regarding fire prevention, protection, and management features established by the City to further minimize the risk of wildland fire. For these reasons, the project would not expose people to an increase risk of wildfire, would not impair an adopted wildfire emergency response plan, and would not require any additional fire protection features above those required by law. Therefore, the project would have no impact on wildfire.

5.3 Significant Irreversible Environmental Changes

Section 21100(b)(2)(B) of the CEQA Statutes and Section 15126.2(c) of the CEQA Guidelines require that an EIR analyze the extent to which the proposed project's primary and secondary effects would impact the environment and commit nonrenewable resources to uses that future generations would not be able to reverse. "Significant irreversible environmental changes" include the use of nonrenewable natural resources during the initial and continued phases of the project, should this use result in the unavailability of these resources in the future. Primary impacts and, particularly, secondary impacts generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with projects. Irretrievable commitments of these resources are required to be evaluated in an EIR to ensure that such consumption is justified.

Approval of the proposed project would cause irreversible environmental changes consisting of the following:

- Commitment of land that will involve a large commitment of nonrenewable resources: The relatively small commitment of land to these uses, which is already developed with the Crime Lab buildings, is considered less than significant when compared to other development in a local and regional context and the surrounding urban built environment.
- Increased requirements of public services and utilities which represent a permanent commitment of these resources: There would be an adequate supply of water and wastewater resources to supply the proposed project and the ability to provide fire protection, police protection, and solid waste services (see Section 3.6, Public Services, and 3.8, Utilities and Service Systems).

- Use of various nonrenewable natural resources such as diesel, gasoline, or oil for construction equipment and natural gas or other fossil fuels used to provide power and heating sources: The energy consumed in development and maintaining the project site may be considered a permanent investment. The proposed project would not use nonrenewable fossil fuels at a greater rate than other typical construction projects. If the proposed project were not to occur, similar resources would likely be used per the project site's existing land use. The proposed project would not increase the overall rate of any nonrenewable natural resource or result in the substantial depletion of any nonrenewable resource.
- Use of various renewable natural resources, such as water, lumber, and soil, for construction and operations: The proposed project is a relatively minor consumer of these supplies when compared to other local and regional users. The proposed project would not increase the overall rate of use of any renewable natural resource or result in the substantial depletion of any renewable resource.

5.4 Significant and Unavoidable Impacts

CEQA Guidelines Section 15126.2(c) requires that an EIR describe any significant impacts that cannot be avoided, including those impacts that can be mitigated but not reduced to a less-than-significant level. Chapter 2.0 of this EIR describes the potential environmental impacts of the proposed project and recommends mitigation measures to reduce impacts, where feasible. Potentially significant impacts are identified in the areas of air quality, hazards and hazardous materials, noise, and transportation. However, except for transportation, these potentially significant impacts would be mitigated to below a level of significance with implementation of mitigation measures identified in this EIR. As discussed in detail in Section 2.4, Transportation and Traffic, the project would result in significant and unavoidable impacts.

CHAPTER 6.0 LIST OF EIR PREPARERS AND PERSONS AND ORGANIZATIONS CONTACTED

6.1 CEQA Lead Agency

County of San Diego, Department of General Services
5560 Overland Avenue, Suite 410
San Diego, CA 92123

- Marc Cass – Project Manager
- Omar Passons – Director of Integrated Services
- Jody Mays – Deputy Director
- Steven Moreno – Real Property Agent
- Dawna Morse – Housing Program Analyst

6.2 EIR Authors and Consultants

Environmental Science Associates
550 West C Street, Suite 750
San Diego, CA 92101

- Bobbette Biddulph – Project Director
- Kim Baranek – Project Manager
- Janelle Firoozi – Deputy Project Manager
- Lisa Maier – Environmental Analyst
- Jeff Goodson – Noise Specialist
- Heather Dubois – Air Quality and Greenhouse Gas Specialist
- Tim Witwer – Air Quality and Greenhouse Gas Specialist
- Shadde Rosenblum – Transportation Specialist
- Jason Nielsen – GIS Manager
- Jaclyn Anderson – GIS Analyst

Community Plan Amendment

AECOM
401 West A Street, Suite 1200
San Diego, CA 92101

- Yara Fisher – Principal Planner
- Erin Phillips – Planner

Transportation Impact Study

Chen Ryan
3900 Fifth Avenue, Suite 310
San Diego, CA 92103

- Dale Domingo – Transportation Engineer
- Monique Chen – Transportation Engineer

Phase I Environmental Site Assessment

Ninyo & Moore
5710 Ruffin Road
San Diego, CA 92123

- Adrian Olivares – Senior Project Environmental Scientist

6.3 Federal, State, and Local Agencies Consulted during the Preparation of the EIR

City of San Diego, Planning Department
9485 Aero Drive
San Diego, CA 92123

- Marlon Pangilinan – Senior Planner
- Shannon Scoggins – Park Designer

City of San Diego, Development Services Department
1222 1st Avenue
San Diego, CA 92101

- Martha Blake – Development Project Manager
- Jeff Szymanski – Senior Planner
- Anna McPherson – Deputy Director
- Ann Gonsalves – Senior Traffic Engineer
- Leo Alo – Associate Traffic Engineer

San Diego Unified School District
4860 Ruffner Street
San Diego CA 92111

- Sarah Hudson – Demographer, Instructional Facilities Planning Department

CHAPTER 7.0 LIST OF MITIGATION MEASURES

This section consists of **Table 7-1**, which is a comprehensive listing of all mitigation measures proposed for the project and all project design considerations that were relied upon to reduce impacts. This list is divided into sections according to the subchapter and impact number.

**Table 7-1
Mitigation Measures**

Impact Number	Mitigation Measure	Mitigation Measure Description
Air Quality		
AIR-1	AIR-1	<p>Construction Equipment: The project shall require all off-road diesel equipment greater than 50 horsepower (hp) used during construction activities to meet USEPA Tier 4 final off-road emission standards or equivalent. Such equipment shall be outfitted with Best Available Control Technology (BACT) devices including a CARB-certified Level 3 Diesel Particulate Filter or equivalent.</p>
Hazards and Hazardous Materials		
HAZ-1	HAZ-1	<p>Soil Contamination, Lead, and Asbestos Recommendations: Demolition of the existing building and construction of the future development shall follow the findings and recommendations of the Phase I ESA, including:</p> <ul style="list-style-type: none"> • In future development of the project site, preparation and implementation of a soil management plan shall be used during construction activities near areas of known contamination. Where contamination is known or suspected, and where grading or other soil disturbance activities could encounter contaminated media, undocumented USTs, or other unknown contamination or hazards, implementation of a soil management plan provides protocols to address hazardous conditions, if encountered, in accordance with local, state, and federal regulations. • Soil sampling shall be performed at the time of the UST removal to evaluate whether an unauthorized release has occurred. • A worker health and safety plan shall be prepared and implemented. • Asbestos-containing materials and lead-based paint shall be evaluated prior to razing of the site building.

Impact Number	Mitigation Measure	Mitigation Measure Description
HAZ-2	HAZ-2	<p>Traffic Control Plan: Prior to the start of construction of the future development, the construction contractor shall prepare a Traffic Control Plan satisfactory to the City Engineer. The Traffic Control Plan shall show all signage, striping, delineated detours, flagging operations, and any other devices that will be used during construction to guide motorists, pedestrians, and bicyclists through the construction area and allow for adequate access and circulation to the satisfaction of the City Engineer. The Traffic Control Plan shall be prepared in accordance with the City’s traffic control guidelines and shall be prepared to ensure that emergency access will be continuously provided.</p>
HAZ-3	HAZ-1	Refer to Mitigation Measures HAZ-1 and HAZ-2 above.
Noise and Vibration		
NOI-1	NOI-1	<p>Construction Noise. The following construction noise abatement techniques shall be implemented by the construction contractor to reduce construction-related noise to less than a 10 dBA increase in existing ambient noise levels at nearby noise-sensitive receivers:</p> <ul style="list-style-type: none"> • Temporary noise barriers shall be placed to block the line-of-sight between construction equipment operation and the residential land uses in proximity to the proposed project’s property line to the north and west. One of the following two options shall be implemented by the construction contractor: <ol style="list-style-type: none"> a. A temporary noise barrier shall be placed along the entire western property line of the project site and approximately 50 feet to the north from the northwestern corner at a height of 14 feet with noise blankets capable of achieving sound level reductions of at least 8 dBA to block the line-of-sight between construction equipment operations and the offsite noise-sensitive receivers to the south and southwest; <u>or</u> b. A temporary 50-by-50-foot “L-shaped” noise barrier shall be constructed for each small construction area at a height of 14 feet with noise blankets capable of achieving sound level reductions of at least 8 dBA to block the line-of-sight between construction equipment operations and the offsite noise-sensitive receivers.

Impact Number	Mitigation Measure	Mitigation Measure Description
Transportation and Traffic		
TRA-1	TRA-1	<p>Mount Everest Boulevard & Balboa Avenue Intersection Modifications (Access Options 1 and 3)</p> <p>Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the restriping of the northbound and southbound approaches on Mount Everest Boulevard to provide an exclusive left-turn lane and a shared through-right turn lane, then convert the northbound and southbound approaches from split phasing to protected left-turn phasing, satisfactory to the City Engineer. Improvements shall be completed and operational prior to first occupancy.</p>
	TRA-2	<p>Genesee Avenue & Balboa Avenue Intersection Modifications (Access Option 3)</p> <p>Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the optimization of signal timing or installation of traffic systems management (TSM) strategies (e.g., adaptive signal technology) to maximize efficiency of the existing roadway through improved signal communications and operations satisfactory to the City Engineer. Improvements shall be completed and operational prior to first occupancy.</p>
TRA-2	TRA-1 through TRA-2	Refer to Mitigation Measures TRA-1 and TRA-2 above.
	TRA-3	<p>Charger Boulevard & Balboa Avenue Intersection Modifications (all access options)</p> <p>Prior to issuance of the first building permit, Owner/Permittee shall assure by permit and bond the restriping of the northbound shared through-left turn lane into an exclusive through lane and convert the northbound and southbound signal from split phasing to protective phasing satisfactory to the City Engineer. Improvements shall be completed and operational prior to first occupancy.</p>
TRA-3	TRA-1 through TRA-3	Refer to Mitigation Measures TRA-1 and TRA-3 above.
	TRA-4	<p>Genesee Avenue & Clairemont Mesa Boulevard Adaptive Signal Control System (All Access Options)</p> <p>Prior to issuance of the first building permit, Owner/Permittee shall pay the fair share toward optimizing signal timing or installing traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway through improved signal communications and operations, satisfactory to the City Engineer.</p>

7. List of Mitigation Measures

Impact Number	Mitigation Measure	Mitigation Measure Description
TRA-5	Clairemont Drive & Balboa Avenue Adaptive Signal Control System (All Access Options)	<p>Prior to issuance of the first building permit, Owner/Permittee shall pay its fair share toward optimizing signal timing or installing traffic systems management (TSM) strategies (e.g. adaptive signal technology) to maximize efficiency of the existing roadway through improved signal communications and operations , satisfactory to the City Engineer.</p>

Subject: 5255 mt. Etna. Remodel

Sent from my iPad. To whom it may concern: I have lived one block away from 5255 mt etna for over 40 yrs. I have seen and heard of the give away to the welfare and homeless classes. You have made us a magnet to them ,world wide. Send them back to their home if they can't afford it here. People have been leaving here forever for that reason,or stop the rich foreigners from moving here and buying up the country. I think you just want to waste money and make back room deals with the labor unions.I pray,pray,pray that you could use the old hospital for some medical use. We have epidemics of diabetics, altizers,heart disease ,mental health,stroke, alcohol and drug abuse. Why not use the building for that. Also since you have used all the parking lots for food joints and banks, how about a green space for the kids and people. We would like a dog park p. B. And Ute have them why not Clairemont? We would like to see an assisted living and or a retirement home.

Mental people should be locked up or moved close to your house . Remember Jon David Guerrero, he lived in one of your places downtown. He killed 3 and injured 4 more in 2016. The pollution, noise, and traffic is bad now, we don't need a traffic study.

We want to maintain lower height limit,and our parking in front of Our Houses!

We have sorry to towers on Crowley way, with many vacant, the. Scranton's on mt. Alifan .probably 80% of your ski.Folks are fake , just look at the ads on tv. Some are using many l d 's and collecting many s.s.i. Checks.

Why have a crime lab anyway ,look at the way they treated Rebecca Zahau.

We make money, We Print It. !

We don't want to be a dumping ground for the world, not another L A Please put this in lajolla or Del Mar or Mira Mesa or north county.

Remember a lot of this homeless is a lifestyle choice. They are having fun swapping drugs, and staying high. I saw one guy at intersection of balboa & genesee, I know him He has a great union pension and still works, but he was there telling people to go To the beach and have a good time, he was way intoxicated.

Some people are truly in need and I am all for helping them.

A lot of them are pure lazy scammers , We all know we can not afford the military as is, So maybe use military housing for the low income housing. We have a lot of military housing in dago. They won the war, because you never hear Don't AskDon't Tell Anymore.

One half of border patrol work for the cartels and the cartels control the border.

thank God somebody does it. we got it going on !!!

Subject: Mt. Etna Project Support Letter

Hello Mr. Cass,

I am a resident down the street from the proposed project on Mt. Etna in Clairmont. My husband and I recieved a letter from Karen (not sure who she is) about the project and we would just like to say that we are in SUPPORT for this project.

We fully support the height limit being raised , increased density and the need for affordable housing in San Diego.

We were unable to make it to the meeting last night because I am due with our 3rd child. We will try and make it to the next meeting but with a new born it is very unlikely. Please feel fre to share this letter of support for the project with who ever may be interested.

Thank you,

WRITTEN COMMENT FORM

I am opposed to the County of San Diego's plan for 5255 MT. ETNA. Clairemont has enough housing for low income/senior living. Please find some where else like Del Mar or La Jolla would be nice. which most likely have little or none of these projects.

I would rather see a County sub site for local residence to get help with minor matters. A second idea would be a County Health Dept.

In ~~closing~~ closing, thank you for your time

Subject: 5255 Mt Enta Rezoning: EIR scoping comments

Mr. Cass,

Please review and include these comments in the scope of the EIR for the Mt. Etna Rezoning project at 5255 Mt. Etna Drive at the old Crime Lab site.

Project Impacts:

- 1) Increased traffic:** traffic is already an issue in the area. During the evening commute, the intersection of Genesee and Mt. Etna gets backed up with cars travelling south, making the turn into Mt. Etna sometimes impossible because cars are blocking the intersection.
- 2) Safety:** Vehicles speeding through the Mt. Etna neighborhood is already an issue, because it is more convenient than taking the major streets like Balboa and Genesee. The following streets are used as short-cuts, and will be used as short-cuts more frequently with an increase in population/vehicles: Mount Etna, Mount Castle, Mount Everest, Mount Culebra, Mount Davis, Mount Elbrus, Mount Foraker, Mount Herbert, Mount Frissell, Mount Gaywas, Mount Hay, and Mount Harris.
- 3) Negative impact on existing recreation facilities:** The existing "Mount Etna Neighborhood Park" is the only public park within walking distance of the Crime Lab. It has many issues including it is not maintained, it is too small for the sudden increase in population. The closest swimming pool has limited hours and is small. The existing public recreation facilities cannot accommodate a swell of population.
- 4) Public services:** The local schools cannot accommodate an increase in population. There is little quality child-care available.
- 5) Population:** Over 1,000 people may be added to the Mt. Etna neighborhood.

Potential mitigation measures:

- 1) Use traffic solutions to prevent 5255 Mt. Etna residents/visitors from driving through the Mt. Etna neighborhood.
- 2) Provide quality public-recreation services on site.
- 3) Provide quality affordable child-care on site.
- 4) Decrease planned density to limit environmental effects.

Project alternatives:

- 1) Consider keeping the current zoning.** Using the CA Density Bonus law, a developer could build enough housing to make the project feasible while minimizing the environmental effects on the existing neighborhood.
- 2) Consider a slow-growth strategy.** Increase the base zoning to RM-3-7 maximum.
- 3) Consider a mixed-use project.** Smaller commercial spaces are much needed in Clairemont to provide services and jobs to current and new residents.

Subject: 5255 Mt. Etna Dr.

Oct 17th 2018

To Whom it may concern,

We were asked to send in our concerns for this project.

- 1.) No many units, no more than 150/200.
- 2.) We don't need more drug addicts/ mentally ill persons in our neighborhood. Open hospitals to take care of these people instead of letting them live on the streets.
- 3.) Traffic is already a issue, Surely someone in the city offices are aware of this problem.
- 4.) The plan shown at the meeting shows only one exit/entrance to these units, another issue overlooked by the planning committee.
- 5.) Clairemont is the place to live right now. (close to freeways, beaches, shopping etc) Sales in our area are going to decrease and people will be moving out before it is to late to get a good price for their home.

Thanks,

Subject: Clairmont Mesa Community Plan WT-4224097

Hi Marc,

I'm writing in protest of the plan for the 494 Affordable housing units to be built at 5255 Mount Aetna Drive. Not only is there no parking associated with this plan, the influx increasing the population in my neighborhood with low income housing is not something that I would like to see happen at all. Not only will this put a massive strain on the intersections that are used by the "mount street communities" this will also lower our property values significantly by bringing some less than desirable residents into the neighborhood.

If you have any further questions please feel free to reply via email.

Thank you,

Subject: Clairemont Mesa Community Plan Amendment and Rezone Project Case No. WT-4224097

Dear Mr. Cass,

My concerns for the Affordable Housing Units for 5255 Mount Etna Drive:

Far too many units for that small area. I do not want Clairemont to become "dense" living. Two schools in close proximity will be expanding and causing more congestion to this small area. I'm all for Affordable Housing, but please limit the amount of units put in the Crime Lab location. This area is already becoming congested.

I also feel that the people with serious mental illness and substance abuse problems should have 24 hours supervision.

Sincerely,

Alison Garrity

To: Cass, Marc
Subject: Public input on Mt Etna Project

To: Marc Cass

We would like to voice our opposition to the project on Mt Etna. The county and the city should be coordinated in their efforts to provide low income housing. Low income housing should be distributed throughout the city and county. Was any consideration given by the county that within a half mile there are two other projects? The Stratton Apartments at 3884 1/2 Camino Aguliar, provides 312 units of low income housing. Directly across the street at 5858 Mt Alifan, there will be a new facility for “formerly homeless seniors”. Adding 400 more units at Mt Etna will be way too much for the immediate area. It has never been a good idea to have a lot of low income housing in a small area. It would still be a problem even if the proposed 400 units were at market rate due to traffic congestion becoming worse. Certain residential streets in our neighborhoods are already experiencing traffic from cars cutting through between Clairemont Mesa, Balboa and Genesee.

Most people in Clairemont are not aware of this proposal on Mt Etna. The height limit should not be changed. 400 units is unacceptable and is at least twice as many as should be allowed. The SDG&E right of way goes right through the current parking lot. In addition to several high power electrical lines, there is the Regional high pressure natural gas pipeline. How can a 5 story residential building be built next to that? The project is too big, and altering the height limit will change the character of Clairemont. I hope that you will consider our comments and those of many others.

To: Cass, Marc
Subject: Mt Etna Low Income Housing Project

Mr. Cass –

I would like to echo my husband’s statement below.

I am writing, like many others, to express my opposition to the proposed Low Income housing project being planned for the former San Diego Crime Lab site at Mt. Etna and Genesee. I am a resident of Clairemont West (I live on Mt. Culebra) and have seen by personal observation that this housing development is not the right fit for our community, for the following reasons:

1. Traffic – This area of Clairemont is already overburdened with traffic, especially during rush hour in the mornings and afternoons. I often have to wait through more than one cycles of stoplights at the Balboa/Genesee intersection and this housing project will add more cars to an area that is already over-capacity for traffic.
2. Parking – Similar to the traffic concern, parking is already at a premium in this area. Many streets and local business don’t have enough parking as it is, and 400+ additional residents in high-density housing will only make the problem worse.
3. Crime – Crime has become an increasing problem in this area with several residents reporting car break-ins and property theft in recent months. The intent of this housing project is house low and extremely low-income residents; statistically a large percentage of crimes are committed by low-income individuals. It stands to reason that the inject of 400+ low-income residents to this area will have a negative impact on crime.
4. Schools/Children’s Safety – Similar to the concern with crime, myself and several other Clairemont residents have small children that routinely play outside. We are already experiencing times where we have to quarantine the kids inside due to helicopters circling looking for at-large criminals; these occurrences are likely to increase with the addition of 400+ low-income residents to the area.
5. Property values – I can appreciate the need for low-income housing and the opportunity for everyone to establish a residence; however, West Clairemont is not the place to do so. Clairemont West is a relatively low-density, family neighborhood primarily comprised of single-family homes. The addition of a massive, high-density housing unit will negatively affect the value of mine and other residents’ homes. We bought these homes partially as investments and for San Diego County to devalue them by changing zoning restrictions is simply unacceptable.

I appreciate your taking the time to read and understand my concerns and sincerely hope that this project be reconsidered.

Respectfully,

Amanda Vanasse

To: Cass, Marc; Jackson-Llamas, Angela; HHS, HCDS; msokolowski@sandiego.gov; bbohrer@chelseainvestco.com; planningcommission@sandiego.gov
Subject: Mt. Etna Crime Lab project - CPA and EIR input

Dear Mr. Cass, Ms. Jackson-Llamas, Ms. Sokolowski, and Mr. Bohrer,

I am writing to provide input on the Mount Etna Crime Lab (the "Property") and the proposed project to develop affordable housing at that location (the "Project"). I thank you in advance for considering my input as you evaluate the proposed Community Plan Amendment ("CPA") and determine the scope of the Project's Environmental Impact Report ("EIR").

By way of introduction, my name is Andrew Cronauer. I live at 4982 Mount Etna Drive, about a thousand feet (or about a dozen houses) from the Property. My wife Daisy and I sold our Mission Valley condominium to move to Clairemont's "mount streets" in order to start and raise our family in this close-knit family community comprised of single-family homes.

The Project's goals are admirable--I am sympathetic to the need for affordable, accessible housing for all San Diegans, including the most vulnerable among us. Our city's housing market becomes more competitive and more expensive each day, and we have a duty to ensure our residents don't get left behind. I disagree with some of my neighbors who believe our neighborhood is incompatible with any affordable housing project.

We moved into our new home during the spring, when the Project would have been in its earliest stages. Since moving in, however, I have read and heard much more about the possible scope of the Project. I read Mr. Cass's letter to the City Development Services Department dated August 24, 2018 (the "Letter") and General Application on Form DS-3032 and associated forms of the same date (collectively, the "DS-3032"). In the Letter and the DS-3032, Mr. Cass requests an amendment to the Property's land use designation to Residential High, allowing for up to 454 dwelling units in excess of the 30-foot height limit. This scope and density is extremely concerning to me and has prompted me to contact you.

In evaluating the CPA and preparing the EIR, I urge you to consider, among other things, the following items:

- !A Aesthetics (including, for example, the aesthetic impact of a building of the size considered for the Property, especially as seen from throughout a community composed mostly of single-story, single-family homes);
- !A Air quality (including, for example, the impact of at least hundreds of additional motor vehicles in the neighborhood);
- !A Safety and crime (including the impact of introducing a substantial at-risk population--for example, I am a recovering alcoholic and addict and I have seen firsthand the damage that addiction can cause to the addicted individual as well as to his or her community);
- !A Education (including, for example, the capacity of local schools to absorb a sudden and substantial increase in population, and the impact of placing a substantial at-risk population within an existing school zone);
- !A Geology and soils;
- !A Greenhouse gas emissions (including, for example, the impact of at least hundreds of additional motor vehicles in the neighborhood);

- !Ã Energy (including, for example, the additional strain on local energy infrastructure);
- !Ã Health (including, for example, the impact on community healthcare facilities and the health impacts of the other items in this list)
- !Ã Hazards and hazardous materials;
- !Ã Hydrology and water quality;
- !Ã Land use and planning;
- !Ã Noise (especially given the proposed scale of the project and its proximity to [directly bordering] single-family housing);
- !Ã Population and housing (including the suitability of the Property for the type of development proposed as well as the impact of such development on existing housing in the neighborhood);
- !Ã Public services (including, for example, the availability of public services such as emergency responders to serve the additional population, especially any particular services that may be especially needed by a lower-income or at-risk population);
- !Ã Recreation (including, for example, the impact that such a drastic population increase would have on the relatively small [and relatively few] local parks such as Mount Etna Neighborhood Park--and considering that residents of high-density condominiums may have even more need for open recreation space than those in lower-density housing);
- !Ã Sunlight access (especially for those neighbors in single-story homes that would suddenly be overshadowed by any building exceeding 30 feet in height);
- !Ã Transportation and traffic (including, but not limited to, the impact of hundreds of additional cars each day on traffic, the impact on traffic noise, the impact on road, sidewalk, and other infrastructure, the impact on pedestrian safety [especially in a school zone], the impact on bus capacity, the ease or difficulty of trolley access from the Property, and the ease or difficulty of access to employment centers from the Property);
- !Ã Hazards and hazardous materials;
- !Ã Hydrology and water quality;
- !Ã Land use and planning;
- !Ã Wildland fire (including the risk to the Project and the risk posed to the surrounding neighborhood);
- !Ã Utilities and service systems;
- !Ã Project alternatives; and
- !Ã Cumulative effects of the above and all other factors.

I sincerely hope that you will consider the above factors and that the final development plan for the Project addresses the clear need for additional--and affordable--housing in our city without undue impact on our cohesive, well-established single-family-home neighborhood.

Thank you for your time. Please feel free to contact me for further discussion or clarification on the above. I look forward to engaging with you over the coming months as the Project progresses.

Thanks and best regards,

Andrew Cronauer

To: Cass, Marc
Subject: Mt Etna Project

Mr Cass

I am writing in regards to the proposed project for a 450 plus housing development at Mt Etna and Genesee. I moved to this quite neighborhood three years ago from Eastlake due to increased traffic and congestion that were occurring in my old neighborhood.

I have some major concerns with the proposal. First, the number of units seems to be high for such a small residential area. I do not think having this many units in small area is beneficial for the current homeowner or potential residents. The side streets have been recently impacted with higher volume of cars using Genesee to bypass the 5 or 805. The addition of 1000 more people will only increase an already overuse section of town. I fear those that use this cut through area will only become more frustrated with traffic and continue to run lights or race through side streets where children are walking from one of the three schools within a mile radius.

Second, transportation in the region is not adequate for the low housing complex. There is a bus line in the area but will be harder to navigate for those that may benefit to new trolley line down Balboa at Morena. I think more suitable site would allow access to more transit options for families or seniors.

I would ask you to take action and listen to the concerns of those neighbors in the area. I would hope that the plans could be modified to allow less units and thus putting less strain on a busy intersection already and less impact on the neighboring streets.

Thank you for your consideration.

Sincerely
Angela Tognoni

Subject: Clairemont Mesa Community Plan Amendment and Rezone Project Case No. WT-4224097

To: Mark Cass, County of San Diego – Department of General Services

I am submitting formal comments in opposition to the proposed Clairemont Mesa Community Plan Amendment and Rezone Project Case No. WT-4224097. I respectfully ask for no zoning change on the site located at 5255 Mount Etna Drive (Former Crime Lab).

As a healthcare professional in a management position, I realize that you may receive all kinds of public comment – ranging from constructive feedback to emotional responses. I am a lay resident of Clairemont Mesa, and admittedly, not a professional with expertise in this area and subject matter of land use and community development. However, the proposed Amendment and Rezone Project seems to propose changes to the Clairemont Mesa Community Plan that seem in striking contrast to the Plan's original and thoughtfully-designed intent and purpose. The issues of concern to the community that would be impacted, as outlined in the Plan include:

- 1) The desire to preserve the low-density, single-family character of the community [Growth is reasonably expected and naturally inevitable. However, the "slow growth" alternative was selected for future development].
- 2) The loss of commercial services due to residential development on commercially zoned sites.
- 3) The need to reduce traffic congestion along Balboa Avenue.

Environmental Factors that are Potentially Affected would include the following:

- Population/Housing
- Land Use/Planning
- Aesthetics
- Transportation/Traffic

For the following reasons:

- 1) Land Use/Planning: The Community Goals/Objectives were determined by the Clairemont Mesa Community Plan to maintain commercial uses in neighborhood commercial centers and ensure that new development is compatible with the existing neighborhood and does not overburden community or neighborhood facilities. The low-density single-family character of the community has created a distinctive image of Clairemont as a desirable and pleasant place to work, live and play in San Diego. A 454-multi family unit facility seems a vast digression from this plan.
- 2) Population/Housing: The deficiency of off-street parking resulting in a lack of on-street parking and alleys congested with parked cars has been identified as a problem in the Clairemont Mesa Community Plan. The areas identified in the plan as lacking parking efficiency were areas adjacent to the multifamily neighborhoods along Clairemont Mesa Boulevard, Clairemont Drive and Balboa Arms Drive. Adding another large multi-family structure would potentially confound the problem, extending the radius of decreased parking efficiency to the areas adjacent to Balboa Ave.
- 3) Aesthetics: One of Clairemont Mesa's attributes are the well-established low-density single-family neighborhoods. The City Council adopted a 30-foot height limit for almost all of Clairemont Mesa to maintain the low-scale character of development in the community.
- 4) Transportation/Traffic: Traffic along Balboa Avenue and Genesee Avenue has increased creating some congestion during the early morning and late afternoon periods and would be substantially and negatively impacted. In Clairemont Mesa, these two streets are well traveled because they serve as the primary east-west, north-south major thoroughfares other than the freeways which are located at the north, east and west boundaries of the community. Although traffic volumes exceeding the desirable maximum generally accepted by motorists can potentially be accommodated, users may consider these higher volumes undesirable, due to high congestion, backups, delays, low speeds, high noise levels, and safety issues.

For the reasons outlined above, I am strongly opposed to the rezoning and sincerely hope you will consider the impacts to the surrounding community, including thoroughfare to adjacent communities. The proposed rezoning is not in accordance with our Community Plan and any amendment would be a great redefining of the Plan – a far digression from its original objectives. The requests for Community Plan Amendment and Rezoning are vastly inconsistent with the entire body of the Clairemont Mesa Community Plan, which indicate consistently that development and rezoning needs to carefully consider the surrounding character, environment, and approved uses.

Respectfully,Ã

Anna KimÃ

4443 Mount Castle Ave, San Diego, 92117Ã

Subject: Clairemont Low Income Housing Project

Marc,

How was the site assessed for the low income housing project in Clairemont. The site is zoned for 30 ft high limits with only 114 units. The project now proposed is 400 units of low income housing, six stories high, nominal parking, no infrastructure upgrades, and numerous zoning exceptions. The streets are already congested due to the added retail shops in the adjacent shopping center. The traffic has increased five fold since we moved to Clairemont 18 years ago. This project provides zero benefit to our community. The only thing I can see is more traffic, an increased burden on our infrastructure and schools, and more crime.

How is that acceptable.

COUNTY OF SAN DIEGO

DEPARTMENT OF GENERAL SERVICES

5560 OVERLAND AVE

SAN DIEGO, CA 92123

WRITTEN COMMENT FORM

The current proposal to build a high-rise building on the site of the Crime Lab is a bad one. Up to ~450 apartments means up to 900 additional cars in the area. With ~225 parking spots allocated for the parking lot, ~675 cars will flood the local streets, resulting in all available sites along the nearby roads to be filled. Others have mentioned this at Tuesday's Scoping meeting. No one thought to ask this question: Where do we put our garbage and recycling cans each week for pick-up? You can be sure all spaces will be filled by cars when residents bring out their trash + recycling...

Subject: Mt Etna Project

Dear Mr. Cass,

Regarding the Mt. Etna Project, its current proposal of making this project all low-income house, building 400 to 450 units on 3-acres including 0.5 parking spaces per bedroom, and raising the Clairemont building from its set 30 feet, is a BAD IDEA. Modify the numbers of units or change the location.

Firstly, don't make the project all low-income, include other socioeconomic income levels. Councilman Scott Sherman of Allied Gardens commented on housing where 100% of the residents are low-income in The San Diego Union-Tribune dated Sunday, August 19, 2018:

He supports inclusionary housing, calling it the antidote to housing projects that become riddled with crime partly because 100 percent of the residents are low-income.

“You want to have people of all socioeconomic groups working together and living together and getting to understand one another,” Sherman said.

Secondly, lower the number of units significantly. If you put 400 to 450 units on the Mt. Etna property, you will create high-density problems in these areas. The Genesee/Balboa/Mt. Etna areas already have traffic flow problems in the morning, at noontime, and after work. They already experience parking problems on neighboring surface streets and on neighboring shopping malls. If you consider 2 to 4 people in 400 to 450 units, you are adding at a minimum of 800 people to a maximum of 1800 people assuming no more than 4 people per unit in 450 units. Adding that many people and their cars to the areas will exacerbate the already existing traffic flow and parking problems.

Lower the number of units significantly or move this project near a freeway. In Mira Mesa, spacious, luxury Casa Mira View apartments house thousands of people. The apartment development offers many amenities to encourage its residents to remain on the premises. And when they need to commute, their location next to the freeway makes it easy for them to take the freeway minimizing inundation of surface streets.

Do not assume putting the Mt. Etna Project along a bus route means its residents will take the bus. For the most part, like most residents in Clairemont, they will take their own car to commute. It is best to locate the Mt. Etna Project next to a freeway.

Lastly, keep the Clairemont 30-foot height restriction. Let's not re-interpret what 30-foot means. It is a literal measurement meant to limit the height of buildings. Keep the 30-foot height limitation. If a builder wants to exceed that limitation, he/she can request for a variance. The variance application provides the county planning and development department time to examine whether this is good or not good for the Clairemont community.

To reiterate, modify the Mt. Etna Project by including other socioeconomic income levels, not just low-income. Lower the number of units significantly to not exacerbate the already existing traffic flow and parking problems. Relocate the Mt. Etna Project near a freeway so commuters from this project do not inundate surface street flow. And keep the Clairemont 30-foot height restriction. Builders can still request a variance.

On a different, yet related topic, revisit whether builders can have an option to buy their way out of having to provide 10% housing for low-income residents to help address the affordable housing need. Are the funds received from builders taking up this option sufficient to build affordable housing for residents of varying socioeconomic levels? It would be interesting for you to look into.

Thank you. I wish I could attend tomorrow's meeting, but I have a previous engagement. I will, however, be emailing this to Marlon Pangilinan and Councilman Chris Cate.

I am sending this email to oppose the above-referenced project to take place in the Clairemont community of San Diego. I have lived in this area for 61 years and have never found Clairemont rentals to be suitable for low income. The area real estate predominantly runs well above the San Diego county average. I, for one, strongly oppose anything that will reduce the hard earned equity in my home, and this project would adversely affect the area real estate values. I believe I speak for all Clairemont property owners; not to mention all other above average real estate locations, ie., university city, pacific beach, La Jolla to name a few areas surrounding Clairemont. I encourage you to seek another location for your project; an area that would fall more in line with low income rentals would be much more suitable. Please advise.

PS, if you want to rezone anything in Clairemont, think about rezoning Clairemont Mesa Blvd between Diane and Dubois. Currently they are R2 zoned with duplexes. I see value in rezoning to C so we could have a small downtown so to speak. This could generate lots of money for the City as it would allow Clairemont to have street fares, Octoberfests, etc., in addition to the City collecting more property tax on rezoned C property.

Subject: Mount Etna low income housing

Mark I would like to express my concerns with the Mt. Etna low income housing project Located at Mount Etna and Genesee Avenue. In no way does this belong here in Claremont. The list of issues with this project is almost too many to number but I'm going to give it a shot. Traffic, our children safety, crime, property values lowered, shall I go on? My question to you is why are they allowing to exceed the local height limit? Why are they building it here when The low income people don't even live here? How would you feel if they built up 450 unit low income housing project next-door to you? Why don't we re-focus this project to a better location and suit these people needs, like closer to downtown San Diego? Feel free to give me a call to discuss this manner at any time.

Barry Kenny

Subject: Mt Etna

As a home owner in the Mt area where these so called "affordable housing units " are to be developed on Mt. Etna is a MAJOR CONCERN for all the residents residing in the MT. Area.. Many of us have lived in the area 40+ years.. it would bring horrible congestion to the area ALL AROUND US.. which by the way is ALREADY A MESS .. TOO MANY PEOPLE IN TOO SMALL OF AN AREA... it is already zoned for commercial & that's the way it should stay... Everyone knows how great the Mt area is in Clairemont... let's keep it that way!!

Subject: proposed redevelopment project for the Mt. Etna Crime Lab property

Dear Mr. Cate, Mr. Cass and Ms. Waney,

I am a resident of the Clairemont Mount Streets and I am writing to express my concern about the large high-density project planned for our neighborhood that I just this week learned about.

I understand that the parcel of land that was zoned for our neighborhood may be rezoned to allow such an extremely high-density project. I would like to attend the next meetings to express my concern and learn about options for thoughtful development. I am a supporter of special programs to help those in need and would like to know my city officials are taking the time to adopt a plan that will be beneficial to new and existing residents.

My concerns include: More than **doubling** the number of residents in our Mt Etna community on a 4- acre parcel!!....unbelievable! The questionable process in the way this project is being pushed through. A huge, dangerous and messy increase in traffic to an already congested area.

Thank you for considering my concerns.

Subject: Do NOT allow this re-zoning to take place!

Oct. 19, 2018

Hello,

We have become aware of a proposal to amend our Clairemont Community Plan to allow the construction of a 5 story building containing 450 "low-income" housing units at 5255 Mt. Etna drive.

We moved to our quiet street in Clairemont in 1984, and our son was born that same year. We appreciated the safe 'feel' of the neighborhood, a place where one didn't need to lock their doors during the day, a place where young people were beginning to move in and raise their kids.

For the over 30 years we have lived here, this precious community atmosphere has been maintained through responsible parties being careful, open and timely in communicating any proposals for change. This process involves listening to the people who will be affected, soliciting their input in an organized and democratic way, finding out how people feel, the residents who care so much about their homes and the quality of life they have worked so hard to maintain.

We have seen changes in our neighborhood, but NOTHING comparable to this proposed project that would require changing the very zoning that is meant to protect us from such things!

Our entire neighborhood has approximately 300 single-family homes. This proposed project is completely out of step with its surroundings and would instantly cause a drastic rise in our population without regard to the history and flavor of the neighborhood. The traffic in the area has already become problematic. The mess that adding 450 units is obvious.

We understand that half of the project would be set aside for "seniors, persons with disabilities, persons with serious mental illness or substance abuse problems, persons with HIV/Aids, military personnel and veterans, at risk youth, survivors of domestic violence, persons who are homeless or at risk of homelessness, transition age youth, and families in need".

We have schools very near the site proposed for this project. Our children walk to school and play in the neighborhood. I'm sure I needn't point out the drastic loss of safety that would result from such a project.

Also, it is sad to say, but the way in which this proposal has been handled is troublesome.

I have learned that the RFP sent to possible developers gave them to understand that they could make an assumption that the changes to the current zoning would take place or already had! That was a bad idea. It brings to mind attempts to ramrod a project through, to hope that people don't notice until it's too late. That is of course as dangerous as it is irresponsible.

It is time to do what is necessary to nip this ill-conceived project in the bud.

Thank you.

Bill Steel, 4251 Mt. Foster Ave. San Diego, CA 92117 (858-472-6940)

Subject: Concerned Resident on Mount Etna

Hi Marc,

I hope you are having a good Friday. My name is Brandon Dillon and my wife, Kelly, and I bought our house at 5032 Mount Etna Drive in December 2017. We recently heard about the plan to build 450+ housing units on the corner of Genesee and Mt. Etna. We originally bought our house under the impression that the property in that area would remain commercial and are upset about the effect the new development would have on the community. We are concerned that the development will increase traffic in the area and will not be able to accommodate for the increased need for parking. Kelly and I are expecting our first child in February. We know that this increase in traffic will cause the street of Mount Etna to become a lot more dangerous for the kids in the neighborhood who live/play in the street, including eventually our own. Additionally, one of the biggest selling point about the area is the highly rated Holmes Elementary school. We are concerned the increase in the community could have a negative effect on their rating and the school district boundaries could be changed to no longer accept our children.

We are concerned about the lack of communication from the city/county on these changes to the zoning requirements. It seems very unethical that these major changes are being considered without any input from the community. Can you please provide me with more information about the following:

- Ã The date and location of any city council meeting that would have an effect on the project moving forward.
- Ã What the funding source is for this development.
- Ã When and where the TEFRA hearing is.

Thank you for your time.

Subject: Mt. Etna Crime Lab project - CPA and EIR input

Dear Mr. Cass, Ms. Jackson-Llamas, Ms. Sokolowski, and Mr. Bohrer,

I am writing to provide input on the Mount Etna Crime Lab (the "Property") and the proposed project to develop affordable housing at that location (the "Project"). I thank you in advance for considering my input as you evaluate the proposed Community Plan Amendment ("CPA") and determine the scope of the Project's Environmental Impact Report ("EIR").

By way of introduction, my name is Andrew Cronauer. I live at 4982 Mount Etna Drive, about a thousand feet (or about a dozen houses) from the Property. My wife Daisy and I sold our Mission Valley condominium to move to Clairemont's "mount streets" in order to start and raise our family in this close-knit family community comprised of single-family homes.

The Project's goals are admirable--I am sympathetic to the need for affordable, accessible housing for all San Diegans, including the most vulnerable among us. Our city's housing market becomes more competitive and more expensive each day, and we have a duty to ensure our residents don't get left behind. I disagree with some of my neighbors who believe our neighborhood is incompatible with any affordable housing project.

We moved into our new home during the spring, when the Project would have been in its earliest stages. Since moving in, however, I have read and heard much more about the possible scope of the Project. I read Mr. Cass's letter to the City Development Services Department dated August 24, 2018 (the "Letter") and General Application on Form DS-3032 and associated forms of the same date (collectively, the "DS-3032"). In the Letter and the DS-3032, Mr. Cass requests an amendment to the Property's land use designation to Residential High, allowing for up to 454 dwelling units in excess of the 30-foot height limit. This scope and density is extremely concerning to me and has prompted me to contact you.

In evaluating the CPA and preparing the EIR, I urge you to consider, among other things, the following items:

- !Ä Aesthetics (including, for example, the aesthetic impact of a building of the size considered for the Property, especially as seen from throughout a community composed mostly of single-story, single-family homes);
- !Ä Air quality (including, for example, the impact of at least hundreds of additional motor vehicles in the neighborhood);
- !Ä Safety and crime (including the impact of introducing a substantial at-risk population--for example, I am a recovering alcoholic and addict and I have seen firsthand the damage that addiction can cause to the addicted individual as well as to his or her community);
- !Ä Education (including, for example, the capacity of local schools to absorb a sudden and substantial increase in population, and the impact of placing a substantial at-risk population within an existing school zone);
- !Ä Geology and soils;
- !Ä Greenhouse gas emissions (including, for example, the impact of at least hundreds of additional motor vehicles in the neighborhood);
- !Ä Energy (including, for example, the additional strain on local energy infrastructure);
- !Ä Health (including, for example, the impact on community healthcare facilities and the health impacts of the other items in this list)
- !Ä Hazards and hazardous materials;
- !Ä Hydrology and water quality;
- !Ä Land use and planning;
- !Ä Noise (especially given the proposed scale of the project and its proximity to [directly bordering] single-family housing);
- !Ä Population and housing (including the suitability of the Property for the type of development proposed as well as the impact of such development on existing housing in the neighborhood);
- !Ä Public services (including, for example, the availability of public services such as emergency responders to serve the additional population, especially any particular services that may be especially needed by a lower-income or at-risk population);
- !Ä Recreation (including, for example, the impact that such a drastic population increase would have on the relatively small [and relatively few] local parks such as Mount Etna Neighborhood Park--and considering that residents of high-density condominiums may have even more need for open recreation space than those in lower-density housing);
- !Ä Sunlight access (especially for those neighbors in single-story homes that would suddenly be overshadowed by any building exceeding 30 feet in height);
- !Ä Transportation and traffic (including, but not limited to, the impact of hundreds of additional cars each day on traffic, the impact on traffic noise, the impact on road, sidewalk, and other infrastructure, the impact on pedestrian safety [especially in a school zone], the impact on bus capacity, the ease or difficulty of trolley access from the Property, and the ease or difficulty of access to employment centers from the Property);
- !Ä Hazards and hazardous materials;
- !Ä Hydrology and water quality;
- !Ä Land use and planning;
- !Ä Wildland fire (including the risk to the Project and the risk posed to the surrounding neighborhood);
- !Ä Utilities and service systems;
- !Ä Project alternatives; and
- !Ä Cumulative effects of the above and all other factors.

I sincerely hope that you will consider the above factors and that the final development plan for the Project addresses the clear need for additional--and affordable--housing in our city without undue impact on our cohesive, well-established single-family-home neighborhood.

Thank you for your time. Please feel free to contact me for further discussion or clarification on the above. I look forward to engaging with you over the coming months as the Project progresses.

Thanks and best regards,

Andrew Cronauer

Clairemont Mesa Community Plan Amendment and Rezone Project
SCH#2018091016

Mr. Marc Cass
County of San Diego, Department of General Services
5560 Overland Avenue, Suite 410
San Diego, CA 92123

Dear Mr. Cass:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Notice of Preparation of an Environmental Impact Report for the Clairemont Mesa Community Plan Amendment and Rezone Project located near Interstate 805 (I-805). The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review (LD-IGR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities.

Caltrans has the following comments:

Traffic Impact Study

A traffic impact study (TIS) is necessary to determine this proposed project's near-term and long-term impacts to the State facilities – existing and proposed – and to propose appropriate mitigation measures.

- The geographic area examined in the TIS should also include, at a minimum, all regionally significant arterial system segments and intersections, including State highway facilities where the project will add over 100 peak hour trips. State highway facilities that are experiencing noticeable delays should be analyzed in the scope of the traffic study for projects that add 50 to 100 peak hour trips.
- A focused analysis may be required for project trips assigned to a State highway facility that is experiencing significant delay, such as where traffic queues exceed ramp storage capacity.
- The data used in the TIS should not be more than 2 years old.

- Please provide Synchro Version 10 files.
- Early coordination is recommended.

Complete Streets and Mobility Network

Caltrans views all transportation improvements as opportunities to improve safety, access and mobility for all travelers in California and recognizes bicycle, pedestrian and transit modes as integral elements of the transportation system. Caltrans supports improved transit accommodation through the provision of Park and Ride facilities, improved bicycle and pedestrian access and safety improvements, signal prioritization for transit, bus on shoulders, ramp improvements, or other enhancements that promotes a complete and integrated transportation system. Early coordination with Caltrans, in locations that may affect both Caltrans and the City of San Diego, is encouraged.

To reduce greenhouse gas emissions and achieve California's Climate Change target, Caltrans is implementing Complete Streets and Climate Change policies into State Highway Operations and Protection Program (SHOPP) projects to meet multi-modal mobility needs. Caltrans looks forward to working with the City to evaluate potential Complete Streets projects.

Land Use and Smart Growth

Caltrans recognizes there is a strong link between transportation and land use. Development can have a significant impact on traffic and congestion on State transportation facilities. In particular, the pattern of land use can affect both local vehicle miles traveled and the number of trips. Caltrans supports collaboration with local agencies to work towards a safe, functional, interconnected, multi-modal transportation system integrated through applicable "smart growth" type land use planning and policies.

Mitigation

Caltrans endeavors that any direct and cumulative impacts to the State Highway System be eliminated or reduced to a level of insignificance pursuant to the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) standards.

Right-of-Way

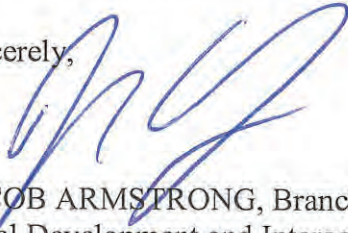

Any work performed within Caltrans right-of-way (R/W) will require discretionary review and approval by Caltrans and an encroachment permit will be required for any work within the Caltrans R/W prior to construction. As part of the encroachment permit process, the applicant must provide an approved final environmental document including the California Environmental

Subject: Mt. Etna Rezone

Hello Mr. Cass,

I am writing you with concern regarding the low-cost housing proposal on Mount Etna. While I do support adding low income housing to our Clairemont community (as I believe every community should do), this is NOT the correct solution. The building should follow current code. Five stories? Too massive for our small neighborhood. There are two schools nearby and a park used by many families and children. The congestion this would create could lead to an unsafe environment for our children. Please stand up for this community and help keep our streets safe.

Building a smaller unit to house a smaller number of low-income residents is a more equitable solution, for the city, for its current residents, and for those in need of affordable housing (I don't believe Clairemont has adequate social services in place to meet the needs of such a high-number of low-income individuals). I want these residents to feel integrated into our community and supported by its infrastructure. Adding a huge building to house a large number of in-need individuals will only create isolation for the new tenants and division among residents, while adding congestion and loitering...leading to unsafe streets and neighborhoods. This is not the answer to our city's problem of affordable housing.

Please reconsider the details of this proposal and adjust it accordingly.

Sincerely,

Camden Flores

Subject: Mt Etna

Dear Mr. Cass,

As a resident of Clairemont and being only 4 blocks from the proposed low income housing project on Mt. Etna, I have strong concerns regarding the size of the proposed project. I feel that having over 300 units in such a small area is detrimental to our neighborhood. The impact on traffic, parking and overall aesthetics of our neighborhood will be negatively impacted. An example of this is the current Stratton low income apartments which is only a few blocks from the proposed Mt. Etna site. Parking around that area is horrendous and problems with the residents of the Stratton has been an on going issue. Having another large low income housing project so close to the existing low income apartments changes the demographics of our neighborhood. Homeowners who've paid a lot of money to live in this part of Clairemont and have maintained their homes are now faced with changes to the neighborhood that we have no say on. If we have no choice in allowing this type of housing in our neighborhood, then please listen to our concerns and suggestions. Please consider reducing the scope of this project, don't make it 100% low income. Have half the units be market value and the other half low income. Our neighborhood is taking a big hit. We already have a chronically homeless apartment scheduled to be built .5 mile from Mt. Etna, we have the Stratton low income apartment complex one block from the homeless apartments and now 300 units of low income housing being proposed. We love our neighborhood and have invested a lot to live here. Our neighborhood is banding together to put up a fight against such a big change. We urge you to consider other options.

Sincerely,
Catherine Cebulski

Subject: Mt. Etna multifamily proposal, (former crime lab)

Importance: High

Greetings~

We own and occupy our SFR property located on the 4200 block of Mount Castle Avenue, the first street west of the proposed multi-family project for low income, homeless and at risk, drug and recovering individuals. I and my husband along with multitudes of neighbors are vehemently against the proposed project and of the plan to waive current height restrictions for new construction. This area cannot afford such developments which will more than double the amount of SFR's and population in the area and increase what is locally already a significant problem with drug addicted transients and mentally ill individuals.

Furthermore, we understand the current plan does not provide appropriate numbers of parking spaces to accommodate the influx of new residents. Mount Castle Avenue, a quiet family, owner occupied street will be the nearest option for overflow parking which takes away from our own on-street parking in front of our homes. Expanding population in this already dense area is not the right solution and punishes owners who pay VERY HIGH taxes to own and live in this area!

Our home was purchased in 2003 and at that time, city improvement plans focused on the undergrounding of power lines with a then published ETA of work in or around 2017 for our area. We looked forward to this upgrade to beautify our neighborhood and increase property values. We are painfully aware this hasn't happened and now the current proposal will bring more blight to the area and negatively impact our property values...not OK! As a matter of fact, on the east side of our street, several houses have recently been put up for sale, a certain indication residents are bailing out before the situation worsens.

Our quality of life and safety is at risk! Stop the planned multi-family development.

Subject: Mt Edna

Marc,

I am sure you have received several emails per the Mt Edna project and as I suspect most are opposed to the project.

As someone that has lived in claremont/pb my entire life and home owner in claremont since 2001, this project is not welcome. 400 units is simply to big for the community. We as a community feel, for lack of a better word, screwed over in this process.

If the project stayed within the existing height limits and adhered to the existing parking spaces per unit (or is it per bed room ... but you get the point) then the community would be more welcoming. Dont dont screw us over because it can be done ... but is exactly how it feels.

Subject: Rezone project #WT-4224097

My comments are at this time will be in Question Form.

Have you considered our met with the city about the traffic plan for the new Hi-Tec school to be located at Mt Acadia and Mt. Alifan dr? My understanding is that over 1,000 new students are going to be enrolled there. The traffic pattern includes drop off at Acadia. Where is the traffic going to be routed from that point? Off of Mt. Everest or Genesee Ave.?Bus and car traffic should be horrible between 7-9 and 3-4.

What impacts how you looked at for the DMV property at Derrick Dr and Genesee? The traffic is bad between 7-9 and 3-4 for people using the office .

How are you factoring the Traffic pattern at Balboa and Genesee for Mesa College? At times in the morning and afternoon the traffic backs up to Boyd.

You can forget about sending traffic North on Genesee. Clairemont Mesa Blvd is already a mess at 7-9 or 3-5. Balboa Ave is already fully packed during commute hours. When the new Charter school opens it will get worse (drop offs and buses). Forget about Friday when services are going on at the Mosque. Get out of your office on a Friday afternoon and look at it.

Last tell me how an EMT vehicle is going to service Balboa when a accident happens at the Rose Canyon Dip? Will just call it blood alley. With the size of the project it is going to happen.

cannot support the size 474 units at this time until ? until answered. Charles Depagter 3964 Mt. Ainsworth Ave

Subject: Mount Etna Project

Hi Marc

My name is Chris Bagalini my family and I live at 4818 Mount Gaywas dr.

I thought it was important you understand what an impact the proposed 400 units will have in our neighborhood.

I can speak for our block there are no less then 13 children under the age of 12 that play outside on a regular basis.

Our street already serves as a pass through from balboa to Genesee which as it stands is very dangerous for the kids.

Now imagine how you would feel knowing 400 units are being built 3 blocks from your home , now imagine the increased traffic flow and danger to your children on your street.

In addition it is inconceivable that there are NO proposed infrastructure upgrades to mount Etna / Genesee intersection.

I work all over San Diego and have been around low and extremely low income housing

On a regular basis and the one thing I notice is the constant flow of drug dealers and other individuals looking to take advantage of the less fortunate not to mention the amount of trash that tends to accumulate at these housing projects.

I believe this is a project that needs a more detailed review process concerning the impact on the surrounding

neighborhood with respect to the safety of the children and the impact to traffic which is already at its breaking point.

I understand the housing crisis and trying to help others but at what cost ?

My kids safety ? The safety of the community ?

Thank you

Chris Bagalini

Subject: Mt. Etna EIR

Good afternoon sir,

I want to write to tell that the proposed rezoning of the Mt. Etna property must be stopped.

This area is already highly congested due to Genesee Ave. being a major thoroughfare for the Clairemont community all the way from University City to Linda Vista. There isn't anywhere to increase road size at this main intersection either so there's no ability for infrastructure change. The neighborhood elementary school for this area is already at capacity and this project would likely cause the school district to rezone forcing families out of the school. Sorry to say, but yes, families that are paying an exorbitant amount of money to live in this area only so their kids can attend this school. Further, this amount of low income will undoubtedly bring with it a crime increase. Any amount of mass influx would yes, but it's proven that forcing low income into higher income causes more. Look at crime statistics for every school that buses from lower income to upper income.

Sir, this project must be stopped or at a minimum drastically reduced and the zoning change stopped. It's against the best interests of the many residents already living in this area. There are undoubtedly more suitable areas for projects of this nature. There is no primarily residential area that had a five story complex shoved into it. The only place I can think of that currently does is downtown and soon La Jolla near the mall, but neither of these are primarily residential.

Respectfully,

Chris Clark

Subject: Clairemont Mt Etna crime lab site

Mr. Cass,

I am writing as a very concerned and disappointed citizen of the Clairemont community. I feel that this project is being steam rolled over our community with little regard for those of us who call Clairemont home. My husband and I chose Clairemont to buy and home and raise our children 20 years ago. We did so because we loved the feel of the area and the community. Over the years we have watched our community grow and prosper. Our schools have improved substantially and there has been an influx of new young families that now call Clairemont home. This is NOT the home they bought in to. This project is to large and does not belong in Clairemont.

There have been so many great locations suggested, why havent these been considered.

Please take the citizens of Clairemont into consideration. This is our home!

Subject: Mount Etna Homeless Housing Project

Good afternoon, Marc,

I have owned a home in Clairemont for several years and have been astounded by how much the neighborhoods have turned around. When we first moved it was very run down, and the shopping center needed a lot of work. Slowly, but surely the neighborhood surrounding Genessee and Balboa is no longer one that I'd be afraid to have my kids play in.

Now, in order to gain political points the County of San Diego is going to attempt to ruin this up and coming neighborhood before it gets a chance to blossom. There is no room for 1,000 more cars, and people. The current height restriction is necessary to keep the community's hard earned luster and feel. There is insufficient public transportation, and this plan clearly has no plan to make this plan work for anyone but the politicians.

Do not change the current zoning, and do not ruin our neighborhood.

Thank you.

Subject: Land Use Entitlement for the County of San Diego...
Importance: High

Dear Mr. Cass & Mayor Faulconer:

Ref: Land Use Entitlement for the County of San Diego – Project Mt. Etna 92117 Clairemont

I recently just purchased a home in the Clairemont area (2-blocks away from the propose land development) and utter great apprehension of the proposal to develop the current Crime Lab for Low Income Housing and most especially for MENTALLY ILL residence. As it is, there are several Low Income Housing developed already in the area and building another will bring more stressful accolades into the community. Accolades such as: Vandalism-tagging and theft, traffic congestion, parking, garbage dumping on Public and Private property and surely other unforeseen effects that these kinds of issues to be welcomed. Currently, the area is already condense and cannot support additional impacts. I am also aghast of the poor communication on the County's part regarding this plan....has the County already decided and/or hiding the intent to build such unwelcome land use to my neighborhood/community. I only knew about it when a volunteer neighbor appeared on my door summarizing the said Plan for the vacant property. No mail notifications whatsoever!!

In some frequency, occasions of Police Helicopter hovering in the periphery of the shopping center and adjacent Apartment Buildings in the evenings and/or A.M. time (ALL developed low income housings). Your proposal of the Mt. Etna will surely bring even more frequency to these disturbing kind of law enforcement in the area. As a new residence, I am already alarmed as it is. My observation from living here, ALREADY--the Clairemont Residence have supported the Housing development for Low Incomes – **it cannot absorb another. It is abhorrently ridiculous that it seems like it is being forced on us once again!** There are other areas that the County/City can utilize for such urban development, and those areas need to be more equitable to support such plan. I moved from the 92037-La Jolla area and I know for a fact that there is no such housing development nor even the County/City dare to propose such plan in that location. I think the 92117-Clairemont area already have done their part and much more – ENOUGH ALREADY!

I also noticed that there's abundance of young people in the neighborhood with young families, as well as remodeling of homes to improve the look and property values within a 2-miles radius of where I am. I too invested in such enterprise to bring value to my home as well as to benefit the neighborhood. Your land proposal will crush the House Value of my home and my neighbors. The county yearly appraises the value of homes and for a fact, that the County Tax Assessor would never assess lower value via "actual true home value" that reflects secured Tax Bill. Thus, a conflict of interest and poor ethical paradigm from the County for the City.

I work very hard, invested to put care into my surroundings and so as my neighbors. Surely, if it was both of you in our position, **would you even consider such development to be in the immediate next door to you – honestly for certain, surely NOT. This plan is highly corrosive to the Clairemont residence and the negative impact to us mitigates the safety/wellbeing and quality of life -- US HERE – MY NEIGHBORHOOD/COMMUNITY! We have done a lot already for Low Income development and it is only fair to have other communities do their part instead of the 92117 neighborhood being constantly looked at as a landfill for another housing plan for low incomes.**

File Number 3300300

Mr. Marc Cass
 County of San Diego Department of General Services
 5560 Overland Avenue, Suite 410
 San Diego, CA 92123

Dear Mr. Cass:

Subject: Clairemont Mesa Community Plan Amendment and Rezone Project
 Notice of Preparation

Thank you for the opportunity to comment on the County of San Diego Clairemont Mesa Community Plan Amendment (CPA) and Rezone Project Notice of Preparation (NOP). The San Diego Association of Governments (SANDAG) is submitting comments based on the policies included in San Diego Forward: The Regional Plan (Regional Plan). These policies will help provide people with more travel and housing choices, protect the environment, create healthy communities, and stimulate economic growth. SANDAG comments are submitted from a regional perspective, emphasizing the need for better land use and transportation coordination.

Smart Growth

SANDAG supports the goals and objectives in the 2011 County of San Diego General Plan that encourage smart, sustainable growth and reinforce the principles set forth in the Regional Plan. A key goal of the Regional Plan is to focus growth in Smart Growth Opportunity Areas (SGOAs). This project is located within two SGOAs identified on the Smart Growth Concept Map: an Existing/Planned Community Center (SD CM-4) and an Existing/Planned Mixed Use Transit Corridor (SD CM-5). Development in these areas supports a sustainable and healthy region, a vibrant economy, and an outstanding quality of life for all. Please continue facilitating smart growth with access to planned transit routes and services within the project area.

Transportation Demand Management

Please consider incorporating transportation demand management (TDM) strategies into the Clairemont Mesa CPA and Rezone Project Draft Environmental Impact Report to mitigate transportation impacts associated with the proposed land use changes. Examples of TDM measures to consider include:

- Unbundling parking and implementing reduced parking requirements given the opportunity for shared parking with the proximate commercial uses. Additional parking management strategies could include priced parking and unbundled parking.

- Pursuing partnerships with shared mobility service providers that can provide connections to major employment sites and regional transit services, such as the forthcoming Balboa Avenue Trolley Station, in support of the Mid-Coast Mobility Hub planning work being conducted by SANDAG. Ensure that shared mobility services have dedicated curb space to help facilitate safe and convenient pick-up and drop-off.
- Encourage the use of transit to residents by providing subsidized transit passes and transit pass sales on-site given the proximity to regional transit services.
- Promote carpooling and vanpooling to residents and employees. The SANDAG Regional Vanpool Program provides a subsidy of up to \$400 per month for eligible vans.
- Providing enhanced bicycle and pedestrian facilities that connect residents to nearby commercial areas, bikeways, and available transit services.
- Providing secure bike parking (bike lockers or a bike station) and bike repair stands to encourage biking to tenants.

The iCommute Program can assist with promoting regional TDM programs that encourage the use of transportation alternatives and reduce traffic congestion. More information on regional TDM programs is available at iCommuteSD.com. Additional information on the Mid-Coast Mobility Hub Implementation Strategy is available at sdforward.com/mcMobilityHub.

Other Considerations

SANDAG has a number of resources that can be used for additional information or clarification on topics discussed in this letter. These can be found on our website at sandag.org:

Subject: Comments on the Notice and Preparation Document "Clairemont Mesa Community Plan Amendment and Rezone Project WT-4224097"

1. The proposed development is too large for the site and neighborhood. The corner of Mt Etna and Genesee is highly congested due to the surrounding shopping centers and the fact that Genesee is a thoroughfare connecting 163 and University City. Adding the proposed number of units will greatly impact the area in a negative way.
2. The mount streets have been used as a shortcut from Balboa to Genesee for decades. An influx of residents and cars will result in more traffic using Mt Everest and Mt Castle as shortcuts. My children attend Mt Everest Academy and the speeding traffic along Mt Everest and Mt Etna is already a problem at both school start and end times.
3. The limited amount of parking being proposed at this site for the number of units will result in cars parking all over the neighborhood.
4. The proposed low income tenancy of at least 50% is too high. The Stratton is already a low income complex in the neighborhood and an additional homeless project is being built on Mt Alifan. This is creating a low income hub in the center of Clairemont. Other neighborhoods and zip codes need to absorb some of the low rent units. Who will spend the market rate (expensive) on a brand new rental unit when over half the other residents will be on Section 8, disability etc?
5. The height limit needs to be maintained in the neighborhood. Clairemont is not Hillcrest or North Park or even University City. We are not a high rise community.

Subject: Mt. Etna Project Scoping

Dear Mr. Cass, Mayor Faulconer, Supervisor Roberts, and Councilmember Cate,

The size and scope in a limited space of the Mt. Etna project is the most disconcerting to me. While many have voiced a quick “Not in my neighborhood” protest, that is not my contention.

I simply cannot see how this project can be a success when so many people are going to live in a five-story building, nor can I see how the residents of Clairemont will not be impacted in very negative ways.

In addition to the concerns that have been expressed on numerous occasions, such as egress, safety, parking, traffic, etc., has anyone taken into account that John Muir School is growing, and High Tech High Mesa has opened and will be filled in the next four to five years? With the increased traffic from residents of the Mt. Etna project as well as additional traffic from those taking shortcuts through the neighborhood to avoid the traffic from the project, our school children will be at increased risk. Finally, I have heard that traffic on Genesee will be negatively impacted by the Pure Water Pipeline.

I ask that you work to scale down this project (perhaps to a third or fourth of what is currently being proposed) so that the residents of Clairemont can continue to enjoy the community we love, and the residents of this development can experience the best that Clairemont has to offer. Wouldn't a smaller success be far better than a colossal failure?

Thank you,
Connie Wagner

Subject: Proposed increase in building and density in Clairemont

NO, this makes no sense. Think about it....

The traffic is already crazy, we already don't have enough water, and when it was really hot this past Summer we were told to not use electricity during peak hours due to possible brown outs.

What do you think will happen when many more people are added?

It is completely illogical.

Thank you.

Subject: 400 units Claremont site

Marc

I'm writing you to tell you that everyone in the surrounding neighborhoods around this project site doesn't want this to go up. We have worked hard to make a living out here and survive in San Diego to just put site on the corner that's going to bring a lot of unwanted problems around here. This area is finally from up and coming to a nice hard working neighborhood. Now with this we are worried it will revert back to what it was. This isn't downtown!! PLEASE DON'T DO THIS PROJECT. We will look up who is backing this project and not vote for them in the next election.

Subject: Mt Etna housing development

Mr. Cass,

I am a resident of the Mt Etna neighborhood. I currently live in a house there with my family. I also grew up in the neighborhood. I understand and support the need for more housing as potentially provided in the planned housing. However I am very concerned with the density of the housing and the sheer magnitude of cars and number of potential new residents. I also think that a multi story building higher than 2 stories will greatly affect the quality of life for the homeowners that back this potential development. This neighborhood still maintains many residents that have lived in their homes for decades and are now themselves elderly. Please be respectful and not build a massive development that will tower over their homes. I am not against the concept I believe more research needs to be done in the form of traffic studies and for the potential number of children to live there- the zoned elementary for the neighborhood- Holmes elementary is already at its carrying capacity. Has anyone with the city or county researched this issue with the school district? Will the neighborhood have to be rezoned for it's school if this development is approved for its current massive size? This will anger many residents who love their neighborhood school. Please take this into consideration.

Thank you,

Danielle Bossen

Subject: Mount Etna Project

The biggest problem I see with the high-density housing project is the massive neglect of planning to improve INFRASTRUCTURE first:

1. TRAFFIC. The current vehicular traffic is fully taxed as is. Even if you put an entrance on Genesee Avenue, it would only slightly reduce the bottleneck that would be Mount Etna's problem. Putting an access on Genesee would require condemning private parking for eminent domain. Even if the County already owns the property between Genesee and the planned housing complex, parking for local business would be sacrificed. On Mount Etna multiple driveways would need to be placed, and the street would have to be widened to accommodate increased traffic, the most likely candidate property being on the south side of Mount Etna, thereby sacrificing parking for the businesses located in the building at the southwest corner of Mount Etna and Genesee.

Worse, residents of the new complex coming from Genesee west on Mount Etna to go home would be backing up west-bound traffic on Mount Etna all the way into Genesee, waiting for east-bound Mount Etna traffic to clear so that they can turn left to go home. You'll either need a left-turn lane in the middle of Mount Etna at that area, or stanchions blocking a left turn to keep Mount Etna traffic flowing westward. In the extra-lane scenario, Mount Etna may have to be widened by as much as two lanes, thereby cutting into business properties north and south of Mount Etna. In the stanchions-blocking-left-turns scenario, residents of the new complex would be (a) making U-turns at Mount Castle and/or Mount Everest and/or (b) pulling into business parking lots north of Mount Etna so as to come back out to make a left turn to go east on to Mount Etna so as to be able to turn right into their apartment complex. The term "accidents waiting to happen" comes to mind. Both east- and west-bound traffic on Mount Etna at Genesee already backs up without the burden of accommodating up to 450 new cars. The specter of even doubling (let alone tripling, quadrupling?) the problem boggles the mind.

2. PARKING. That is a huge problem. There appears to be inadequate provision for off-street parking. The City of San Diego has been remiss in the last 30 years or so in not requiring off-street parking. For example, when Balboa Ridge Condos on Balboa Arms Drive were upgraded 10 years ago or so, the off-street parking accepted by the City was ONE parking spot per unit, irrespective of whether the unit was a studio or a four-bedroom. That is sheer idiocy. If the County of San Diego plans to slam that four-acre property with high-density housing, it should require the developer to have two parking spots for the first bedroom and one more parking spot for every additional bedroom. That failing, expect to find cars parked all over neighboring streets -- the problem faced by Mesa College and San Diego State University -- and into the commercial parking lots north of Mount Etna and south of the development. This will not only affect the profit margins of businesses bordering on those parking lots, it will engender anger and possible vandalism as a result. Who's going to police violators of private parking?

3. SCHOOLS. Have any warnings been given to Mount Everest Academy and John Muir Elementary School? When you increase the local population density by anywhere from 25% to 40%, that will be reflected in the demands on the local schools. Can they accommodate such a dramatic increase? Does the County feel that that is its problem?

4. CRIME. One does not need PhD in urban planning to know that the denser the population, the higher the crime rate. It is not linear, but exponential. Think of the crime rate in a rural farming community. Then think of Chicago. Heck, think of just downtown San Diego. Frank Herbert's quote is spot-on here: "Beyond a critical point within a finite space, freedom diminishes as numbers increase. . . . the human question is not how many can possibly survive within the system, but what kind of existence is possible for those who do survive."

Clairemont already has an annoyingly high crime rate. Here is a sample if it in the area around my house (<https://spotcrime.com/#32.8173838%2C-117.1911634>):

3.00 Miles around 4705 Mount Alifan Drive, San Diego CA 92111

Crime Type	Date/Time	Address	Details
Burglary	10/07/18 05:11 AM	4400 BLOCK BALBOA AVENUE SAN DIEGO	Details
Theft	10/04/18 09:45 AM	5300 BLOCK MT ALIFAN DRIVE SAN DIEGO	Details
Assault	09/06/18 08:00 AM	3800 BLOCK CAMEO LANE SAN DIEGO	Details
Theft	10/02/18 07:45 PM	4200 BLOCK GENESEE AVENUE SAN DIEGO	Details
Vandalism	10/01/18 10:00 PM	3500 BLOCK MT ACADIA BOULEVARD SAN DIEGO	Details
Arrest	10/09/18 03:30 AM	5100 BLOCK BALBOA ARMS DRIVE SAN DIEGO	Details
Theft	10/01/18 09:45 PM	5100 BLOCK BALBOA ARMS DRIVE SAN DIEGO	Details
Burglary	10/03/18 03:10 PM	4500 BLOCK MT LINDSEY PLACE SAN DIEGO	Details
Robbery	09/29/18 01:14 PM	5800 BLOCK BALBOA AVENUE SAN DIEGO	Details
Burglary	10/09/18 05:00 AM	6100 BLOCK BALBOA AVENUE SAN DIEGO	Details
Theft	10/05/18 03:36 AM	3600 BLOCK BROOKSHIRE STREET SAN DIEGO	Details
Arrest	10/06/18 02:58 AM	3100 BLOCK CLAIREMONT DRIVE SAN DIEGO	Details
Theft	10/08/18 08:00 AM	6300 BLOCK BEADNELL WAY SAN DIEGO	Details
Arrest	10/02/18 08:21 PM	6500 BLOCK MT ADA ROAD SAN DIEGO	Details

Those coordinates are my latitude and longitude within ZIP code 92111 and 92117. To understate it, we Clairemont residents do not relish exacerbating our crime problems. The police can't keep up with what we already suffer. Is the San Diego Police Department going to be augmented, that is, will there be sufficient new taxes under the planned Clairemont population explosion, to hire enough new officers to keep a lid on the rise in burglary, theft, and vandalism?

5. UTILITIES. I have no direct experience with providing electricity, water, and sewage, but if the amount of attention given to the aspects of infrastructure I've discussed above is reflected for utilities, then the job has been inadequately addressed.

One concern that I've not seen addressed at all is EMF (electromagnetic fields). The planned community is directly underneath SDG&E's high power lines. While there is no consensus about harmful effects -- some say none, some say significant -- one really questions the wisdom of putting living quarters, especially a high-rise, so close to the sources of EMF radiation. As a tax payer, I wonder if my taxes will need to be used in the future to (a) fight a lawsuit for alleged carcinogenic effects and/or (b) pay off a plaintiff.

6. RESIDENTS. It is not clear to me that occupants with problems -- financial, drug-related, mental and emotional, or otherwise handicapped -- will have the support systems they require. Has the County provided solutions to those issues? I don't think a developer cares about the aftermath once he's been paid for fulfilling his contract to build.

Who's picking up the tab for helping those in need? If nobody, then this issue is directly related to the crime issue I've already discussed.

Thank you for your time. Please consider and SOLVE these infrastructure problems before moving ahead with implementing a massive number of new living units in such a tiny space.

Sincerely,

Dave Bullock

Subject: Re: AFM

Hi Marc,

Thanks for receiving my comments.

I've been living in the Clairemont community and owned my home since 1986. During this time I've witness very little if any assistance from the city of San Diego to promote the way of life and create in the county's words a "Live Well San Diego" environment. We, the home owners of this area, have personally shouldered the responsibility to clean up what was left behind by the look the other way city council. We've banded together to literally clean up our neighborhood by walking the canyons and streets picking up trash, monitoring and eliminating drug users/suppliers and making it inconvenient for people to loiter/sleep around our homes. The city of San Diego should be proud of the Clairemont community for doing its part. As a reward it should be noted successful organizations find ways to improve the living standards for those who care and stand behind leaderships direction. In our case we've been ignored way too long. The south Clairemont park is an example. Remiss of maintenance for some time now the tennis/basketball court is completely unusable due to its surface instability and street maintenance in our neighborhood is deplorable.

The location of our Clairemont community with its quick access to San Diego's many freeways makes this neighborhood a highly sought after and desirable place to live. San Diego's county and city leaders should get on board with this understanding and help to make Clairemont its little La Jolla, not an overcrowded and less expensive place to live.

With this said please review the recommendation to develop a 454 unit affordable housing project that will cripple all we've worked for in the past thirty years. The onslaught of cars and people to this area will bury what we've worked so hard to overcome. As a concerned citizen of San Diego I understand as our population grows so will our need to accommodate community living. But as we grow we will also need to honor, protect and serve those who've cared for our community in their lifetimes. Clairemont could use additional parks not parking lots. Marc, this letter is intended to reach out and open the hearts of our city's leaders. It's not my intent to stab any hearts with written words. Please understand our Clairemont community's desire is to believe in San Diego in its future. Trusting the leaders of our beautiful city to reward its citizens who care about our land by developing services to enrich their lives is the perfect opportunity for them to stand behind their "live well" vision. In Mayor Faulkner's words I'm "Proud to be a San Diegan". Help me to be proud of our leaders.

Thank you Marc for reading my comments,

Subject: Project case no WT-4224097

Mr. Cass:

I have serious concerns in regards to public safety with the Mt. Etna project.

Proposing building a tenant-occupied high rise structure is extremely unsafe with the current staffing levels at the local fire stations.

The Clairemont fire stations struggle to keep up with the daily calls as it is due to the high-density living in all the apartments and the large homeless population.

The national standard set forth by the NFPA (National Fire Protection Association) states there should be one firefighter per 1,000 citizens. With a population of over 80,000 in Clairemont, this firefighter to citizen ratio is already dangerously low. Adding a high rise with seniors, disabled, and low-income renters, and in excess of probably 2,000 people, would require the addition of more fire staffing. The bare minimum number of firefighters to respond to a high-rise fire, at minimum, is 34.

What is the proposal to add infrastructure, not only fire but police, potentially teachers, and other support providers for the density of this type of complex? Will addition fire and police stations be built to ensure public safety?

This area was not originally zoned for this level of high-density living for a reason. We ask that we put an end to this absurdity at the zoning level.

Concerned citizen,
David June

Subject: Mt Etna Comment

Mr Cass,

I am writing as a concerned Citizen to provide feedback on the current proposal for the Mt Etna Crime Lab project. I appreciate the need for a multi-family residential development in this location, and the need for affordable housing. The community is strongly opposed to the current proposal because the number of units proposed (over 400) far exceeds the intent of our community plan and would detrimentally impact the community. We are asking that the density be reduced to be in line with the community plan (or at least closer to it), which has been shown to be economically feasible. A better alternative for the community is a mixed-used development with 120 +/- units with ground floor retail and community center that could be embraced by the community, meet the project objectives, and provide much needed housing for the community. My top concerns for the 400+ unit project are as follows:

1. The high number of people being added will impact schools, which are already over-crowded with high student to teacher ratios
2. The number of residents will impact our park, especially Mt Etna Park by adding 1000 potential users without providing additional park area or improvements
3. I strongly believe in helping mentally-ill or those at risk for substance abuse issues, but they (on average) pose a higher risk of committing crimes. By adding a large number of people with these issues into one location, we will be accepting a disproportionate number of people with severe and potentially dangerous issues into our community. This can provide a risk of increased crime. The number of residents with these conditions should be limited to avoid a disproportionate number of high risk individuals in one area.
4. Mt Etna Drive traffic will become worse, and more dangerous. Residents and park users are already dealing with issues from cut through traffic from Mount Herbert on Mount Etna. In addition, the traffic light at Mt Etna and Genessee already backs up during rush hour. The project cannot safely add 1000 residents without negatively impacting the local streets and making them more dangerous.
5. This location scores in the 30's for transit score, which is considered "poor", so this area should not be targeted for High Density development.
6. The rezone process has been done to this point mostly behind the scenes. Once the rezone is complete, there is no further discretionary approval required which limits the need for a detailed project review with the community. Many of my neighbors had not heard of this project until this week and they feel frustrated in the way the County is circumventing the community involvement.

In summary, we believe in the need for a residential project here. I have not heard from a single resident that is in support of the density proposed (400+ units), but many would be in support of a greatly reduced density in line with the community plan (120+/- units). There is no reason a smaller project would not be viable here, and scaling the project down to conform to the existing density would alleviate most of the concerns mentioned above, and allow the community to embrace this project.

Thank you for your Consideration,

David Smith

Public Scoping Meeting Comment Sheet

Marc Cass

County of San Diego

Dept. of General Services

5560 Overland Ave

San Diego CA 92123

marc.cass@sdcounty.ca.gov

Written Comment Form:

This week I attended the 2nd scoping meeting at Marston school in Clairemont, to hear about the proposal for the Mt. Etna property located at 5255 Mt Etna Drive.

The plan is to build 454 units, and to do this the county/city would need to rezone the property to allow it to go 5 stories high and change the zoning from commercial to residential. I oppose this plan. The size of the building and the density with 454 apartments is out of scope for the existing neighborhood. The county/city should build a development with fewer units that include up to 25% affordable.

As many people at the meeting talked about I am concerned about density, crime and the lack of services for the residents of this project. This is a 4 acre site and with 454 units you could easily have 1,000 plus people in the space and even more vehicles. Will there be spaces available for visitors? Parking would overflow into the adjacent streets of the neighborhood and medical office building across the street.

The developer spoke of the types of people they were designing the property for, including the homeless, or people close to becoming homeless, people who have substance abuse problems, domestic violence victims and their families, seniors, and people with brain injuries. Is there information available about how similar types of projects with these various types of populations have been successful in other developments? I would like to see half of the units available for people who are already in the workforce.

Some questions that come to mind:

Will there be services on site 24/7 for the residents? Social workers who will live on site to help the people when things happen? I recently heard of a successful affordable housing units downtown that included services within the development.

No one mentioned security; will there be a security company on site to monitor the property?

Who will be monitoring the units to verify how many people are living in each unit, if they are all listed on the lease and adhere to the requirements?

Who will be responsible for the ongoing upkeep of the property?

From the diagrams presented at the meeting, there is only one driveway in and out of the complex, this is not safe. Mt Etna Drive is already congested in this area, with the neighborhood traffic, and 2 schools up the street and this is one of the only streets to get to Genesee Avenue.

Walking and biking in this area is already difficult. Has statistics been gathered on the number of accidents at this intersection?

What kind of open spaces will be available for residents?

In one area in our neighborhood on Derrick Drive and Balboa Arms, the area is very dense, filled with apartments and condominiums, each week on our walks we see how much trash and broken glass is around the cars parked on the street. I am concerned with the increase of people in the Mt. Etna complex that a similar situation could happen here.

A major concern is the power lines that currently reside on the parking lot of the project site. Will this cause any health and safety issues for the residents? There is also a natural gas smell on the Mt. Etna side of the street. If the project goes forward, how will the demolition of the building be handled, as there could be asbestos and other hazardous waste?

I highly recommend reducing the size of this project for future residents and current residents of the area and should include both people in the workforce and affordable housing units. If you want it to be successful, bigger is not the answer.

Subject: Proposed Housing

Good Morning,

I'm writing to you to voice my concerns about the proposed Mt Etna housing project. I don't feel that this was a well thought out plan, especially the large number of units that are in the plan. Our neighborhood has many winding streets, and adding the additional traffic from this development will greatly hinder our way in and out on a daily basis. Additionally, property values are thriving and adding the low income housing proponent will drastically affect that. Please take the community concerns into account when deciding on this detrimental proposal.

Subject: My Etna Redevelopment

Dear Mr Cass

I am adding my voice to the proposed redevelopment plans for the old crime lab on Mt Etna. And it's a resounding NO!

I am alarmed that the traffic impact alone doesn't disqualify this plan. This is one the most congested small cross street intersections in all of Clairemont. The Genesee Ave traffic heading south through Balboa Ave in the afternoons is solid with and backs up for probably half a mile. That means this development would be using the side streets to try and exit and enter their property. Check Mt Etna and you'll see that it already has speed bumps on it to prevent the speeding traffic cutting through this neighborhood for as a short cut to Balboa. Right past an elementary school.

You have a known and acknowledged safety hazard that you are purposefully making worse.

In addition Clairemont has a height limitation that has been a part of our community plan since the 90s. Now this plan is going to be ignored along with the desire of the existing neighborhood so a developer can stuff a people storage unit 5 stories high with a 1000 people in it. This is just unbelievable.

This neighborhood deserves to be listened to and our wishes respected, not to used as an easy mark for developers and a fund source for the County.

What happened to Live Well San Diego? The thousands of San Diegans in Clairemont deserve to live well too!

Subject: Mt Etna Project

I am opposed to the Mt. Etna project and the negative impact it will have on the neighborhood. It is far to large a project for the neighborhood to support from the increased traffic to the already over crowded schools. There is already an issue with the traffic on Mt Etna and having that many more vehicles on the corner would just make it like living in downtown San Diego at rush hour. The schools would not be able to support the additional students the project would bring. With the addition of that may people the crime rate would go up. Please do not turn Clairemont into another Downtown San Diego. I thank you for your prompt attention to this matter.

Subject: Mount Etna Crime Lab Project

Marc,

We are providing community feedback within the prescribed timeframe regarding your proposal for the site of the County's former crime lab on Mt. Etna Drive in Clairemont.

We, and all of my neighbors I have spoken with, are in total disagreement with your proposal for the use of that property. I have to say that the normally accommodating residents of the Mt. Etna section of Clairemont are really angry about your proposal and the way you went about moving it forward. Let me get to the details. You propose changing the existing zoning on that parcel from commercial use to high density multi-family residential. You propose eliminating the 30' height limit contained in our Community Plan. You propose parking standards associated with a designated Transit Corridor. You propose a ministerial project review process that eliminates the role of the Clairemont Community Planning Group in reviewing your plans, leaving the zoning variance decisions up to some city bureaucrat. This is all unacceptable. We live here and deserve to be heard. The project you propose is just too large for this neighborhood and totally out of character with the existing build out. This is a single family home neighborhood. There are no multi-family residences here. A 400 plus unit behemoth just doesn't fit. This area is not on a Transit corridor. There is limited city bus service and good luck if you don't have hours to reach your destination. People who live here drive cars because the bus service is so limited. Parking standards need to reflect this reality or our streets will be lined with cars that don't have a place to park within the development. Your ministerial project review proposal, combined with the exceptionally limited effort you made to seek out community feedback gives us real concern about whether you even care what we think. We find it very disconcerting that when the County's project consultant (AECOM) scoped the project at 116 units with 50% market rate and 50% low income combined with some commercial use that you submit a proposal with 400 plus units, 100% low income and inadequate parking, all requiring zoning variances that you want the City to do without our input. How would you feel if this was your neighborhood we were talking about? The project, as proposed, would have a major detrimental effect on our neighborhood. People move here to raise their families. There are three schools here. Mt Etna Park, although small, is well maintained by the City and used extensively by families and young children. The North City Little League uses three fields behind Mt. Etna Park as their home field. Organized youth soccer teams play on the fields behind John Muir school. Kids and adults use the sidewalks extensively. It's a family neighborhood. Already cars travel too fast on Mt. Etna Drive and the intersection of Mt Etna and Genesee gets very backed up at certain times of the day. With the development you propose, this intersection will become a continuous nightmare from the new traffic from the proposed housing units trying to exit onto Mt. Etna to get to Genesee. This, of course, will lead to cut through traffic and more speeding on Mt Etna Drive. This is all avoidable with a proposal that is properly sized for the neighborhood rather than for the financial needs of the developer.

We want to comment on the proposed occupant allocation percentages. The homeless need to go somewhere and whatever is built in Clairemont will be a small down payment on the solution to this problem. I want to share our experience to highlight our concerns. Our neighborhood has a homeless flop house. 8-9 adults live in a four bedroom house. It's a drug house where drugs are made and sold. Some residents are well known to the police. There are 10 vehicles that park there. The police can't help us unless they catch them in the act which is highly unlikely. The City Code Compliance office can't help because the SDSU mini dorm lawsuit has their hands tied. Vandalism has increased since the arrival of the homeless. Drug buyers stop by at all hours. What if your proposed development includes a group of folks like this? What can we expect from the City to fix the problems that will occur?

The character of the Mt Etna neighborhood has changed over the years. It used to be that you could buy a house here for 200K. Now it takes 700K to buy into this neighborhood. People care for their homes and keep them maintained. They care about their neighborhood. The people here didn't cause San Diego's affordable housing crisis. The blame sits squarely with the politicians who made short sighted decisions and those who chose to become lap dogs for the Unions and the Environmental Lobby. Policy decisions were made that have caused the construction of affordable housing to be 3X the cost of other adjacent states. The people here are not a bunch of NIMBY lunatics. They have compassion for seniors and low income people who just need a place to live. The neighbors I know can get behind a right sized project that doesn't destroy the character of the neighborhood, doesn't damage our quality of life and the desirability of this neighborhood and keeps the trouble makers out.

Thank you for hearing us out.

Re: Clairemont Mesa CPA and Rezone Project WT-4224097 (Mt. Etna)

We are in opposition to the proposed Chelsea project and against a zoning change. This project was hatched in the county's offices with no prior input from the people it will affect! This Mt. Etna location is not suitable for many reasons:

- !WAY too large for the site, too much density for an existing neighborhood!!
- !Too close to established single family homes, out of character for the area
- !All buildings would take away the current privacy of the nearby homes and block sunlight
- !Increased noise from tenants and cars in the complex coming and going would be a continual nuisance to neighbors
- !Added light and glare from the building would be a nuisance
- !Ongoing construction would have disruptive effects on the entire surrounding area with trucks coming and going, blocking traffic, also degrading air quality with noise, exhaust and dust
- !The lengthy 99-year lease will see the complex deteriorate with time as many projects do, creating an eyesore for the community
- !Neighborhood streets will see more side street traffic trying to circumvent gridlock at intersections; also more noise from the added traffic and more on-street parking, which will take away current residents' spaces
- !The proposed mix of tenants is not a good fit—persons with drug and alcohol abuse problems, homeless history, “serious” mental illness, and other behavioral issues should not be housed in a high density project next to family homes, nor are they suitable to live together with families in the complex itself! Higher crime is associated with these demographics
- !The single entrance/exit driveway for the complex would spill directly into lines of cars waiting at the intersection of Mt. Etna and Genesee, which would be a gridlock nightmare!
- !This project offers NOTHING to benefit the surrounding community—why should it be exempt from providing infrastructure improvements, a park, or other mitigation features?
- !Existing schools cannot handle more students from a high density complex
- !The cumulative effect of the above problems, combined with other area projects through future years, would be harmful to our quality of life, which we cherish and for which we have paid a high price to live in this area!
We don't deserve to have our zoning changed to degrade it all.

Clairemont already has a high percentage of affordable housing and is targeted for yet another project on Mt. Alifan. This particular site is in the middle of our community's central business district with tremendous traffic gridlock already! More gridlock creates more stress and time issues in our lives!

The site could be better used to provide County services or to bring in more revenue to the County by leasing to a profitable businesses, not subsidized housing.

Sincerely,

Don and Lyn Booth

Dear sir

I strongly oppose the project at 5255 Mount Etna, for the following reasons:

- 1 lack of Community input
- 2 large increase in population in a quiet established neighborhood ~1957
- 3 little or no parking available
- 4 increase in traffic (there is already gridlocked at times in this area)
- 5 large potential for an increase in crime
- 6 clear violation of height restriction

Thank you,
Don Burnette

Subject: Mt. Etna project

Marc,

Thank you for reading this. All our time is valuable. I am a proud resident of Clairemont since 2001. I'm in my 40s and married with 2 teenage kids. Small business owner in Morena Blvd area. It's taken a decade or so for people to respond positively when I tell them where I live or where we bought. People want to live in this community, kids are attending their neighborhood schools. Newcomers share the same pride as the original residents in the house next door.

- **Do not change the height limit** - this sets a very bad trend. Areas of SD that are designed for vertical living have infrastructure to support it. CLMT does not. We are already running at capacity.
- **Do not change the zoning** - the community would be better served with another employment zone.
- **The density number proposed is way to high**

If I look at this purely analytically from the numbers given in the scoping meetings, this is a square peg in a round hole. This 20lbs in a 5lbs bag. The adjacent neighbor and surrounding **shared** infrastructure can not handle that many people living at the density.

1st elephant in the room: The reality is there will be way more adults (2x to be conservative) living per unit than what was originally designed. This is SoCal.....people will have cars for quite sometime. Mt Etna, Mt. Castle, Mt Everest residents will get screwed.

2nd elephant in the room: A low income demographic living at density (that being the key word) brings problems with it. Enough said on that, the stats are what they are.

It struck me that the completed project slides Chelsea showed at the last meeting all seem to have land as a common aspect. This project should be moved elsewhere to a area that can support the aggressive mandates set by the state. There is a right and wrong way to do this.

Thanks for your time,
Doug Johnson

Subject: Low income housing Clairemont

Mr Cass,

I am a long-time resident in the area of the proposed low income apartment building in the mountains streets. While I believe that all communities should share in low income housing, I believe this plan overburdens our neighborhood. The traffic in the area is already bad and this proposed project could only make things much worse. Please reconsider the size and scope of this plan and don't ruin our neighborhood.

Respectfully,

Doug Graham

WRITTEN COMMENT FORM

The current proposal to build a high-rise building on the site of the Crime Lab is a bad one. Up to ~450 apartments means up to 900 additional cars in the area. With ~225 parking spots allocated for the parking lot, ~675 cars will flood the local streets, resulting in all available sites along the nearby roads to be filled. Others have mentioned this at Tuesday's Scoping meeting. No one thought to ask this question: Where do we put our garbage and recycling cans each week for pick-up? You can be sure all spaces will be filled by cars when residents bring out their trash + recycling...

Subject: Crime Lab - Mount Etna EIR feedback

Hi Marc,

Myself and many of my neighbors have serious concerns about the crime lab rezoning and low income project currently being considered by the county.

Our neighborhood is a master planned community and the infrastructure and neighborhood character was not designed for this kind of density increase.

This project significantly exceeds maximum units for the current zoning and will have a negative impact on our community bringing more crime, traffic and strain on our infrastructure. Complexes with 100% low income residents have been shown to significantly increase crime in the area especially high density complexes such as this. Both low income recipients demographically contribute to higher crime as does high density and this project brings both.

This level of rezoning and density increase should not move forward unless the lacking infrastructure and quality of life issues are sufficiently addressed.

Subject: Clairemont Housing Project

Hello,

As a Clairemont resident, I am writing to inform you that I am against the low income housing project that is proposed for mt etna & genessee. 400 units designed for a multiple story building that exceeds the town's height limit is unacceptable. San Diego needs to design smaller scale low income housing and determine the effects on local communities, before building these grand scale units that could have detrimental effects to the surrounding community. I also find it interesting that clairemont (a historically working / middle class region) is the new Home for severely low income individuals, however more wealthy areas such as La Jolla or Encinitas don't have plans for the same types of low income units.

Thank you,

Elizabeth McQuinn

SAN DIEGO, CA 92123

WRITTEN COMMENT FORM

As a long-time resident in Clairemont (Mt. Etna Dr.), I oppose the proposal to add a 400+ residential property for affordable housing (or any housing!) on the Genesee & Balboa access. Currently, there is too much traffic in this area already and more residents will saturate the issue further. It also creates much traffic on our neighborhood streets. With two schools and community baseball fields, the traffic and street parking is already at it's limit.

While I understand and appreciate the need for affordable housing, especially for seniors, disabled and veterans, I believe placing such a large unit in this area would be bad for all parties (current residents, businesses and new residents). We simply do not have the infrastructure to accommodate that many people, cars, traffic (inc. buses blocking the increased traffic), etc.

Instead consider affordable housing for qualified seniors and protected veterans of perhaps 100 or less units, to include a nice garden & outdoor space. This would be better for the community, not only due to the space issue but also to eliminate further crime in our neighborhood and potential danger to our young students attending schools on Mt. Etna.

Subject: California Public Records Act Request - WT-4224097 EIR Comments

Hello Mr. Cass:

I am writing to request public records from the County of San Diego under the California Public Records Act. I would like information regarding the comments received by the County in response to the County's Notice of Preparation of Environmental Impact Report, Clairemont Mesa Community Plan Amendment and Rezone Project (WT-4224097) dated September 10, 2018 and October 5, 2018 (together, the "EIR Notices").

Please provide a copy of the following:

1. All writings received by the County in response to or related to the EIR Notices, including but not limited to writings received by the County that reference the EIR Notices, the Mt. Etna Project, and the September 25, 2018 and October 15, 2018 scoping meetings, whether sent by email, U.S. Mail or otherwise; and
2. Any written record of public input or comments received during the public scoping meetings held by the County on September 25, 2018 and October 15, 2018. The request is directed at any written records of comments received, including identification of the speaker and the nature of the comment, and not the County's evaluation of any such comments.

Subject: My. Etna: High density is too dense.

Hello Mr. Cass,

I understand that there will likely be a development project at the Mt. Etna site, but please do not allow this high density rezone to be approved. We can add more homes that reflect the current makeup of the community. I moved to Clairemont to get away from high density establishments and urban issues.

I've got two children under three and chose Clairemont because of its suburban density and safety.

I truly hope you are able to find a different solution to implement in this location. 400 units is more dense than the most dense areas of downtown and it really doesn't fit here. This is the wrong project for this location. Perhaps a community park and some townhomes would be a fair compromise.

Please, please, please hear our community when we say this just isn't the right project for this location.

Sincerely,
Emma Smith

Marc,

My name is Eric and I am a concerned Clairemont resident. I attended the scoping meeting for the Mount Etna housing project the other night. Quite honestly I think the developer, architect, and county should be embarrassed and ashamed to propose what they did. To warehouse people in 448 units on a little over 4 acre site is ridiculous. That is four times what this lot is currently zoned for. Not only do you have to amend many of the zoning and city planning requirements to implement this plan but can you image the poor quality of life the tenants will have. Can you image if your elderly mother lived there and what it would be like living in such close proximity to 250 homeless, recovering durg addicts, alcoholics, the mental ill and their families. The people that you are proposing as tenants are already under tremendous stress and to be placed in tiny boxes right on top of each other will only exasperate there conditions. This will then spill out into our community and create a tremendous burden on us. Crime, homelessness, traffic, and the burden to are already overburdened infrastructure will all undoubtedly increase. Also do you realize what this development is going to be like in five years, how worn out it is going to be, the plumbing issues that many units are going to have, the strain on the infrastructure. It will have major issues almost right away.

The type of project your are proposing are what used to be called "the projects" and are widely known to be unsuccessful and a detriment to the community where ever they have been built. That is why densities of this nature are no longer built.

I realize that this it the classic bait and switch tactic that the government and developers use, propose the best for them/worst for the community case first and then work down from there and any of the extra units you are allowed to build the more money you make. It is completely unacceptable and we plan on opposing it in any and every way possible.

For once you and your team need to do what is right for the community and not what is best for the developer.

Hello Marc,

I am writing to you as a concerned and quite frustrated member of the Clairemont community. I have lived and grown up in Clairemont my entire life and feel that this project is absolutely wrong for the community. The current zoning and height limit should be followed as is. I feel that a 5 story building is ABSOLUTELY too high!!! So many of my neighbors on Mount Castleton DID NOT purchase their homes to have some 5 story high building squeezed in right behind them.

There are no neighborhood schools that can support the new children that would come in due to this. Schools that were mentioned as being available are not a neighborhood school. They are a charter and a homeschool based. The neighborhood school is busting at the seams and can not even allow any choice kids into it. How do you think the people who specifically moved into this neighborhood to have their babies and toddlers go to Holmes Elementary are going to feel when the city has to reset its boundaries due to the building of this project?!

The streets of this small and quaint neighborhood can not support the amount of traffic that will be coming through it. During peak hours there is a high enough volume of traffic already. Our local grocery stores (Sprouts and Vons) are already crowded and adding in another 1000+ people would only cause more congestion. Not to mention the amount of cars that will be parked on the Main Street, parking in the adjacent business parking lots.

Our current zoning was put into place for a reason. We are not Mission Valley!! This is a smaller residential area. I do not understand why you can not leave the zoning and build something that will thrive and not build something that will just survive. On top of it Clairemont has horrible plumbing and adding that many people would just be a disaster to this area and our pipes.

I absolutely love the idea of having a smaller scale low income senior and mentally disabled building. By following the current zoning you could absolutely make this work and have it thrive. With the surrounding schools and those near by I can guarantee that their students would volunteer for their hours.

Lastly our community and city is hurting when it comes to our law enforcement. Typically with lower income buildings comes a raise in crime rate. Our neighbors can't get police to come out when being verbally threatened but now we have to home if we have any problems with this building that our police force will respond. I just want to live in a community where our opinions and values are respected and heard.

Thank you for your attention to this important matter,
Erika Clark

Subject: WT-4224097 - Crime Lab Rezoning

All,

I was unable to make the 25th meeting as it was not advertised or made public for people to be present for this critical meeting. It seems a bit shady for something that will dramatically affect the area to not engage the local community. I do not support any changes without the below being addressed in the plans.

Points that are not called out in the presentation or anywhere on the site:

- * Developer will be mandated to develop equal parking to density proposals
- * Developer will be required to assessment and upgrade pedestrian areas to accommodate the increased foot traffic
- * Developer will be mandated to use solar or wind to augment the or fully power the new development (cover parking or on top of the building)
- * City will upgrade public transit to accommodate the increase
- * Water, sewer, power, how will this be upgraded to handle
- * City will expand current roads to accommodate more traffic

We cannot accept any plans that does not address the parking situation. They must account for (at a minimum) 1 car per studio, 2 cars per single bedroom, 4 for 2 bedroom, and so on. If not, they are going to profit off the city and force the residents and the city deal with the overflow and street parking. Also, any developer must agree to contribute to an overall infrastructure pool, that expands the trolley to the area and other public transit projects to move the people.

Please take into consideration that the # of units proposed here is far too many for this area to accommodate. Our concerns too much traffic, devaluation of local properties, crime, schools too near by; and, then there is the height limits, too!

Please research your own data base of other locations and deny this project.

Subject: Case No. WT-4224097 Former Crime Lab Project

I am opposed to the zoning change for the 5255 Mt. Etna Drive (former Crime Lab) project.

Don't change the zoning from DISCRETIONARY to MINISTERIAL. The Mount Streets of Clairemont are a community. The height and other issues could be changed at the whim of the developers and the community needs to be able to have input. The community west of Genesee Avenue is made up of all single family homes. There isn't a tall building or apartment complex

anywhere in the area. There is an ELEMENTARY SCHOOL at Mt. Etna and Mt. Everest. The SAFETY of these children should be a BIG CONCERN, with the tenants in the proposed complex to be made up of 1) Persons with serious mental illness or substance abuse, 2) HIV/AIDS persons, 3) at risk youth, 4) survivors of domestic abuse. This Mt. Street community is made up of middle class residents who have worked hard to maintain a comfortable and well kept home. The quality of life for these residents would be compromised by adding **over 400 units**. Nothing has been mentioned about green space/recreation for the area. Where are the tenants going to go - into the streets?

The Genesee Avenue businesses, Target, Home Depot and Sprouts, create a huge amount of traffic already. To drive west on Balboa Avenue, from Genesee Ave, to Clairemont Drive at rush hour sometimes takes up to 3 light changes to get through NOW. Balboa is a two lane street, and the stress on it from a multitude of additional automobiles would be horrific.

SUGGESTION: Why not consider the property for HOUSING FOR SENIORS or Memory Care. There are medical facilities right there which would HELP ease the life of the residents.

So, PLEASE DON'T Change the current zoning, or at least, don't make the designation Ministerial.

Subject: Case No. WT-4224097 Former Crime Lab Project

I am opposed to the zoning change for the 5255 Mt Etna Drive (Former Crime Lab) project.

Don't change the zoning from DISCRETIONARY to MINISTERIAL. This will give the community no input or recommendations. The height, and other issues could be changed at the developers whim and the community could be stuck with an eye sore and multitude of problems associated with the tenants, parking and congestion.

The city owns the land and building. The city owns it for the citizens of San Diego. We the citizens want quality of life to be enhanced by new housing and construction. Not a developer out to profit at the expense of the residents. They don't care about the existing people's lives that will be impacted, only their bottom line. Don't let the acuteness of the problems of insufficient housing to prompt hasty action. The city ordinance requires developers of multifamily buildings to set aside 10% of the units, not 50% to 100% for low income/affordable units.

The number of units and lack of reasonable parking is the beginning of a no go for me. The surrounding area has 300 homes in a much larger footprint than the 454 units purposed on a small amount of acreage, less than 4 acres. This will put undue pressure on all utilities and support systems in the area.

PARKING for 454 units at 1/2 space per unit is completely inadequate. With 454 units there could be in influx of 454 to 1800 vehicles. Where are cars going to park that don't fit into the 227 parking spaces allowed? The only option is park on nearby residential streets. This will cause additional traffic and inconvenience to the nearby residents of the SFR community. The additional parking could also go into the commercial properties and negatively affect business. They could also go into the medical buildings parking and affect the patients ability to access the doctors offices. We don't know how many residents will have cars or how many residents would be living in the UNITS. Are the units studio, one bedroom, two bedroom or three??? Number of units do not address the amount people that will be added to area.

TRAFFIC is already a problem at the conner of Mount Etna and Genesse. We experience back up to get out the neighborhood at Mount Etna and Genesse and at Mount Everest and Balboa.

There is an elementary school located at Mount Etna and Mt Everest. Traffic for the school children is already a problem. This will create more chance of injury to our children.

I have seen tensions already at both of these intersections exhibited by drivers and it will only get worse. Frustration of being late to school, work and activities does not lead to a safe driving experience.

SAFETY for the children at the elementary school located at Mount Etna and Mount Everest is an issue. With the designated tenants of building being:

1. Persons with serious mental illness or substance abuse
2. HIV/AIDS persons
3. At risk youth

4. Survivors of domestic abuse

Putting people in a neighborhood so close to an elementary school could have devastating consequences. Picture your 6 year old coming home from school with a used needle or drugs found on the street. Coming home in tears after being accosted by someone with a mental illness or an abuser looking for the family he or she believes lives in the neighborhood.

Just to mention a few. Who is going to take responsibility for any incidents created by the 50% up to 100% residents in this development? The city? The developer? Or will the general population just have to DEAL with the consequences.

You would not put a cannabis dispensary or a sex offender in close proximity to a school. An Elementary school is approximately 2 tenths of a mile from the proposed development.

PUBLIC SERVICES would need to be increased to protect the area. Fire hazard of a high rise building and the crime that could/would increase would need to be addressed by the city. We already are challenged by an inadequate amount of police officers in San Diego.

GREEN SPACE/RECREATION is not addressed. Where are the tenants going to go, into the streets?

LIBRARY is not adequate to provide for additional patronage. It is barely adequate for the current residents and would highly stressed to provide for additional usage. The library would a highly used resource for the targeted population of the development.

UTILITIES would be stressed with that many units added to the area. Sewer, water supply and electricity must be improved to accommodate additional population.

QUALITY OF LIFE FOR EXISTING RESIDENTS has not been mentioned. After many years of hard work to own in a comfortable middle class neighborhood you are taking away our quality of life by adding so many units. Residents in the area are senior citizens to new borns. Many of the original owners have had their children and now their grandchildren purchase homes in the neighborhood they grew up in. Don't ruin what generations have worked to maintain and improve over the years.

PLEASE DON'T CHANGE THE CURRENT ZONING or at the least don't make the designation ministerial.

SUGGESTIONS ON USEAGE OF THE PROPERTY

Yes, we need to address the issue of lack of affordable housing in San Diego. Not at the expense of the current residents.

How about a **MEMORY CARE** or **HOUSING FOR SENIOR CITIZENS**. Shopping and medical facilities are nearby. This would create less traffic and parking issues. It would not increase the risk of crime significantly.

VETERANS without mental or other issues that put them in "at risk" category.

Build at 45 units per acre, approximately 160-170 units, as zoned and put aside 10% for affordable housing. This would be in keeping with city's plan for new development.

If housing "at risk persons" of any nature it must have on site 24/7 support and security.

WHY DO WE NEED TO HAVE SO MANY UNITS IN THIS DEVELOPMENT?

I understand the city needs 20,000 units of affordable housing. Why are we not addressing the new construction projects to have to set aside a percentage for this purpose.

Projects currently proposed, planned and or approved that were mentioned in an article in SD Union Tribune

date 9-26-2018

NEWLAND SIERRA in North County 1140 SFR and 995 Multifamily none are affordable housing.
3rd and A Street/ CORTEZ HILL 270 apartments. None are mentioned to be affordable units. Also for 270
units there are 280 parking spaces

TOWN & COUNTRY MISSION VALLEY 840 rental unit None mentioned to be affordable units.

PARK & MARKET 426 apartments = ? affordable units

CISTERRA/RITZ CARLTON 7th and Market at total of 218 units and 34 are affordable units.

OLD DOWNTOWN LIBRARY SITE = Mixed use project 392 rental units 30 are subsidized.

County Supervisors:

I have lived in my home on Mt. Castle Ave. for 62 years. I'm one of the rare original owners and have always loved the convenience of this location. It has been my 'one and only' home, and a place where my children grew up in a safe community environment. If you don't think this massive structure being planned by the County Supervisors will disrupt this tranquil existence, then think again. Not only do you plan a mix of people, good and bad, but apparently the residents of this community get little say in what's being planned, the size of the building, the number of people you plan to house, and the added congestion in our neighborhood.

I, and many of my neighbors, have recently put thousands of dollars into upgrading and remodeling our homes. Some of those same neighbor's houses back right up to the Crime Lab parking lot. You are destroying their hopes and dreams of living in their homes for a long, long time. Who wants to have a high rise directly in back of their homes with people looking directly into their yards and homes. Shame on all of you Supervisors for planning such a project in that location.

Prior to the Crime Lab, we had a hospital on that site. One of my daughter's was born in that hospital. Then came the Crime Lab. Both the hospital and the Crime Lab have been good neighbors. But now, without any concern for our community whatsoever, you are planning to house 550 residents right behind us. You've got to be kidding.

My question to each and every one of you: How many of you have projects such as this in your back yard? How many of you would fight a project such as this one 'tooth and nail' to have it relocated. Clairemont will step up to the plate on this project. I'm 85 years old. I've had a wonderful life in this home in Clairemont. We are lucky enough to have all the conveniences at our fingertip, and can boast that it's the center to every freeway, and valued property because of it's convenience. Please don't ruin that.

Joan Spieker
spkrgal33@sbcglobal.net

P.S. I expect the City Council members to cooperate in advising against this project; also the Clairemont Planning Group and the Clairemont City Council. You politicians need to 'earn your keep'. I would like a reply to this E-mail just to show that someone, or all the County Board, and City Council have read it.

Subject: Fw: Proposed Project at Mt. Etna and Genessee Ave.

It would seem that our County Supervisor's have little concern for the people that established this community of Clairemont some 62+ years ago. The Clairemont area is central to every freeway, and is coveted by many as an ideal location for establishing a home and raising a family. I have lived in my 'one and only' home for 62 years, and have loved this area for all of it's conveniences.

Now the County wants to turn the Crime Lab into a low income home for as many as 500 to 800+ individuals. This will be a major impact on the citizens of this community. The county has said they will house low income seniors, veterans, substance abuse (alcohol and drug) and mentally ill individuals. They want to raise the height limit for building the project. I, and most of my close neighbors, are totally against this project.

First off, it will greatly impact the neighbors who live on Mt. Castle Ave. and whose houses abut the parking lot of the Crime Lab. With a higher structure, the residents of that structure will be able to look directly into the backyards and houses of our neighbors. This is totally unacceptable. Our good neighbors have put thousands of dollars into remodeling their homes, and expecting that this will be their home for many years to come. Many of them have young children, and they are expecting, like my husband and I did many years ago, that the neighborhood is safe for playing, and basically a crime free neighborhood.

Now with so many moving into this planned project, some very good people I'm sure, but some we might be dubious about, is causing much anxiety among the residents of Clairemont. When these folks decide they want to take a leisurely stroll where do you think they might want to stroll? Not along busy Genessee Ave. when traffic is racing by every hour of the day, and it's so noisy. They'll want to stroll along our streets that are within close proximity of their establishment, and OUR HOMES. We're not talking about a few people walking out streets, we're talking about possibly in the 100's. I fear there could be an uptick of crime on our streets, which has been almost nil up to this point. And what about the congestion of extra traffic, and parked vehicles on our streets?

I expect each and everyone of you can see the dilemma and frustration that this project is causing to the citizens of Clairemont. I also expect that all of you will fight against this proposal. Politicians should not be able to do anything they want to do without consideration of it's citizens, and on this project the citizens say NO.

Subject: Fwd: Morena Corridor Specific Plan: Project #582608 / SHC 20161021

Hi I want to confirm you are receipt of the below email.

Morena Corridor Specific Plan: Project Number: 582608

SCH NO - 2016101021

Dear Mayor and City Representatives,

As citizens, families, and advocates for Clairemont, we strongly oppose the language on p. 327 of the PEIR that does not allow for the character of the community to be preserved. We specifically oppose the language that allows for higher building limits than 30 feet. This has verbally been promised by Lori Zaph and other city officials, but this particular language allows a loophole to change the entire Clairemont Mesa area without the consent of the citizens.

The increased traffic congestion impacts quality of life in the community for residents that already live here and those passing through the major through-fares on Genessee and Balboa. The citizens want to maintain the 30 foot height limit and the character of our neighborhood.

In addition, my neighbors and our household opposes the City's Planning Department "Height Concepts" proposal for rezoning of commercial property of the Home Depot on Balboa Avenue to residential spaces. We are an older neighborhood, and the need to access a major hardware in proximity is a necessity in the neighborhood as something is always in need of replacement. While there is an Ace Hardware in Clairemont Square, the store does not supply the magnitude of the items needed that Home Depot does. The other nearest major hardware stores are in other majorly congested areas in Mira Mesa and Mission Valley. Removal of this store will strongly impact the quality of life for existing residents, not to mention the impact on lost jobs in the community.

For similar reasons, we also oppose the rezoning of commercial space to residential on Clairemont Drive and Balboa Avenue. It is the mayor's priority to handle homeless problems, and removing the Good Will is a job loss to those recovering from homelessness and addiction. In addition, Harvest Market is also located in that shopping Center, and it is one of the only locally owned grocery stores left in the neighborhood. Not only will we be sitting in traffic for the additional proposed homes, the loss of jobs will also impact our residents.

As working parents, any additional time sitting in traffic is time that we cannot spend with our families, I'm sure we can all agree that healthy communities begin with healthy families. The last thing the residents of Clairemont want is another congested Rosecrans and University Town Center area. Please take into consideration the residents of Clairemont and prioritize growth in another area of the city.

Kindest Regards,

Stephen and Jessica Bowlin and residents of Clairemont

Sent from my iPad. To whom it may concern: I have lived one block away from 5255 mt etna for over 40 yrs. I have seen and heard of the give away to the welfare and homeless classes. You have made us a magnet to them ,world wide. Send them back to their home if they can't afford it here. People have been leaving here forever for that reason,or stop the rich foreigners from moving here and buying up the country. I think you just want to waste money and make back room deals with the labor unions.I pray,pray,pray that you could use the old hospital for some medical use. We have epidemics of diabetics, altizers,heart disease ,mental health,stroke, alcohol and drug abuse. Why not use the building for that. Also since you have used all the parking lots for food joints and banks, how about a green space for the kids and people. We would like a dog park p. B. And Ute have them why not Clairemont? We would like to see an assisted living and or a retirement home.

Mental people should be locked up or moved close to your house . Remember Jon David Guerrero, he lived in one of your places downtown. He killed 3 and injured 4 more in 2016. The pollution, noise, and traffic is bad now, we don't need a traffic study.

We want to maintain lower height limit,and our parking in front of Our Houses!

We have sorry to towers on Crowley way, with many vacant, the. Scranton's on mt. Alifan .probably 80% of your ski.Folks are fake , just look at the ads on tv. Some are using many l d 's and collecting many s.s.i. Checks.

Why have a crime lab anyway ,look at the way they treated Rebecca Zahau.

We make money, We Print It. !

We don't want to be a dumping ground for the world, not another L A Please put this in lajolla or Del Mar or Mira Mesa or north county.

Remember a lot of this homeless is a lifestyle choice. They are having fun swapping drugs, and staying high. I saw one guy at intersection of balboa & genesee, I know him He has a great union pension and still works, but he was there telling people to go To the beach and have a good time, he was way intoxicated.

Some people are truly in need and I am all for helping them.

A lot of them are pure lazy scammers , We all know we can not afford the military as is, So maybe use military housing for the low income housing. We have a lot of military housing in dago. They won the war, because you never hear Don't AskDon't Tell Anymore.

One half of border patrol work for the cartels and the cartels control the border.

thank God somebody does it. we got it going on !!!

Subject: mt edna project

I am very concerned about this proposal. our traffic is already congested in this area, we have hundreds of children walking to school in this area , this is a danger to them , once the height limit is raised on residential residence's , it is my understanding you are thinking of redoing the home depot shopping center with more high rise residential units included there as well. I would like to see a plan that involves the whole city and neighborhoods so we can see where exactly the other projects are going to be, you are already planning a new development on Mt Alifan for homeless and seniors less than a mile from this project , we do not want to be a place where we are in danger of not having enough resources to take care of additional crime , traffic , school over crowding,etc, I think the residents of Clairemont should have a voice in what is being planned for their neighbor hood as its using tax payer dollars to pay for this and whatever facility you put here we have to live next door to it.

thank you

Subject: Mt. Etna Crime Lab redevelopment

Mr. Cass,

As a resident of the area (5076 Mt Harris Dr), I would like to express my strong support for this project. San Diego's housing prices are unaffordable; the only solution is more stock. I think the smartest way to add stock is to upzone in current low density areas, Clairemont is a prime spot for more density.

Please feel free to contact me if you need a more balanced view on development. Generally, the majority of people who show up to these community meetings are older and very resistant to change. Unfortunately, people like me who support sustainable development have young children are not always able to make the meetings.

Thank you for you time.

Subject: Opposition to current plans for the Mount Etna housing project

Dr. Mr. Cass,

As a resident homeowner of Clairemont for nearly 10 years now, I want to voice my opposition to the current plans for the Mt. Etna low income, high density apartment project. I have been closely following this project and I am in shock that the space is trying to rezone to allow for 400 units, when it is current zoned for 124. This area is already highly congested and the current infrastructure does not support this extreme change in residents to an already busy area. The people of Clairemont feel like we are becoming the dumping ground to meet country quota of affordable housing with both the Mt. Etna and Mr. Alifan projects, and it is completely unfair. We urge you to consider the current residents of Clairemont, who chose this area as our homes based on NOT being a traffic, people nightmare.

The current plans does not fit with the rest of the area at 5 stories and 400 units - with the possibility of over 1,000 new residents to the area. With the completely lack of good public transportation, Clairemont is extremely car dependent and this will make the area a traffic jam nightmare. Please PLEASE do not allow for this rezoning, cramming all low income housing into one small area of San Diego. It is unfair to the current residents and a vastly inappropriate choice for such a project. Please be reasonably. Please show that Clairemont residents matter.

To: Cass, Marc
Subject: Comments for the EIR, Clairemont Mesa Community Plan Amendment and Rezone, Project WT-4224097

Mr. Cass,

I am very concerned about the Mt Etna Crime Lab project. I expect negative environmental impact regarding:

- !Ã Traffic,
- !Ã Public safety,
- !Ã Noise,
- !Ã Utilities,
- !Ã Recreation,
- !Ã Walkability,
- !Ã Air quality (Climate Action Plan),
- !Ã Parking,
- !Ã Schools,
- !Ã Businesses.

- 1.Ã This is the third affordable housing project within a half mile. That's really a lot for one neighborhood to absorb. Other projects: Stratton (apartment complex, 300+ units, converted to affordable housing by Wakeland) and 5858 Mt Alifan Drive (52 homeless units, in progress). Again, the Mt Etna Crime Lab project is slated to be the LARGEST affordable housing project in the history of San Diego. This could easily be 1600 people. Supervisor Roberts' office says that a 3-bedroom affordable housing unit is designed to house up to eight people.
- 2.Ã At 404 units, this will be the **largest affordable housing project in the history of San Diego** (eclipsing, by over 30%, the previous largest – Civita, in Mission Valley, where 306 units was a tiny fraction of a 320-acre housing development). Plus, Civita got a much less risky affordable housing population than what Chelsea is proposing for Mt Etna Crime Lab.
- 3.Ã Lots on Mt Castle Drive (western edge of property, on other side of power lines) may never see anything but late afternoon sunlight again.
- 4.Ã Extreme density will cause noise problems. There will be insufficient recreation space for the many children. The neighborhood library won't be able to service a doubling of the neighborhood population.
- 5.Ã A population of addicts, severely mentally ill, recently homeless, and felons will certainly cause safety concerns at Mount Everest Academy, one block away. Holmes Elementary will be unable to handle the influx of students.
- 6.Ã Addicts increase crime in any neighborhood where they live, especially when there are lots of them. Parents, teachers, and neighborhood residents will worry about needles and drug dealing at Mt Etna Community Park (3 blocks away). People previously inclined to walk will be pushed back into their cars, out of safety concerns.

7. Water, sewer, gas, and electric lines were installed in the 1950s. They were designed for a neighborhood of single family homes. It doesn't make sense that Chelsea could double the number of neighborhood residents (no infrastructure improvements) without adversely affecting quality or reliability of service.
8. 465 parking spaces for 404 units (some 2- and 3-bedroom, low income families as population) won't be nearly enough.

Air quality (Climate Action Plan) concerns call for more walkability and getting people to work/shop/dine near where they live. However, the proposed sandiego.gov Clairemont Community Plan

https://docs.wixstatic.com/ugd/a513cc_b532ee32a1544ae8b9d2a923c820a74a.pdf

seems to replace our neighborhood shops (e.g. Home Depot and Target) and restaurants (e.g. Panera and Five Guys) with yet more high-rise, high-density housing. Children appear in the concept drawings. Surely, they and their parents won't travel, everywhere they go, on the #41 MTS bus (rated "Fair/Poor" on page 20 of the February 2018 Affordable Housing Phase II Feasibility Analysis). It seems as if the City wants to re-purpose every single parking lot in Clairemont for (probably affordable) housing.

Page 6 from another version of the new, proposed Clairemont Community Plan

https://docs.wixstatic.com/ugd/a513cc_30e262f6823f46d8a1452120b1e31d9e.pdf

shows Transportation Priority Area designation for much of Clairemont, which means developers can avoid providing adequate parking. I'll focus specifically on the Mt. Etna Crime Lab development since that's the EIR topic. We know that people won't really give up their cars. So, where will people park? This is a rhetorical question. The obvious answer: in business parking lots (so no parking for customers), in school parking lots (like Mt Everest Academy, one block away), and in single-family-home residential areas (many square blocks, every space taken).

Please consider the City of San Diego Sewer Design Guide published by the Public Utilities Department.

<https://www.sandiego.gov/sites/default/files/legacy/mwwd/pdf/sewerdesign.pdf>

On page 1, it discusses what's required for large scale projects like the Mt Etna Crime Lab site. Keep in mind that this project will double the neighborhood population. Notice the word, "shall" (i.e. strong assertion), in the Guide's text. "Project applicants shall contact the Public Utilities Department Senior Civil Engineer when the wastewater flow estimates of individual areas planned for development generate more than 5 percent of the wastewater stream at the point of connection with the City's list of critical sewers. The intent of this requirement is to ensure that flows from new projects will not adversely affect the downstream conveyance systems operated by the City and to ensure that previous studies have accounted for those flows in the design of the City's downstream conveyance systems." Will the EIR provide detailed sewer diagrams and proof that all (not just neighborhood) "downstream conveyance systems" won't be impacted.

Subject: Mt. Etna project

Hi Mr. Cass,

Just a quick email to add to your massive collection today. Like others, I did not hear about the Scoping meeting, but I happened to be at Marston for a parent meeting that night , so I stopped in. I listened to the presentation and the speeches and have followed the issues online. Like everyone else we know, we are against the project.

As 20 year residents of Clairemont/ Bay Ho, my husband do not support this project at all. Low income housing might be good in some areas, but perhaps in a rural area where the community and ample land supports it. That location is not Clairemont. We have kids that attend area schools and am most concerned about those at Holmes, High Tech; and Mt. Everest Academy and John Muir schools on Mt. Etna. Parents won't want their kids to walk to school, walk to Starbucks , Panera, Target, Circle K, or other businesses as they currently do at lunch and after school... if the area becomes less safe. We feel that this project will bring in an element that is at-risk and unsafe.

I am not criticizing people in poverty or with mental illness. 51% of the residents of San Diego (and especially Clairemont) have modest/low incomes-- and many live in Clairemont houses that are paid off--otherwise they would likely be homeless too. And one out of four people in this world have mental illness. We all are---or at least have family members that are-- affected by poverty and/or mental illness. However, we are concerned about the visitors that may come to visit residents of this project. Those who are mentally or economically challenged may be really

good people. But we don't have assurance that their friends are, as well. It's not necessarily the homeless resident, but the resident's cousin or friend who might crash there, inviting in drugs, violence, or other crimes into the area. I say 'may' but those we know believe that crime will most assuredly increase, if this project goes through.

Traffic, congestion, and tall buildings are of concern, but to parents like us, it's the safety that is paramount for our children. With increased crime because of this project, those who moved to the Mt. streets because it's safe---will likely move out of the area. Parents move to neighborhoods based on safety, and the quality of the neighborhood school. I think parents may move to other areas outside of San Diego, and even out of the county. For example, at one point, we moved to Phoenix area because of the lower housing costs, but we picked a city where we knew to be safe. If residents move, would the SD County really want that loss of Property Tax income?

I do support a much smaller project, perhaps located in the outskirts of Mira Mesa, El Cajon, Chula Vista, or other outlying areas. The project is too huge and won't fit in Clairemont, and it's not right for this community. Perhaps a community center with a pool would be nice, or some other venue that the residents could enjoy. If a high rise is necessary, at least keep it with low density and capitalize on the nice view it might provide. But please stop this project-- no one wants it.

Best,

Holly and Garrett Churchill

Subject: Mt. Etna housing development

Mr. Cass,

Please add my voice to the chorus of voices expressing opposition to the high-density apartment building planned near the corner of Mt. Etna and Genesee Ave. in Clairemont. While I agree that all neighborhoods must do their part to help with the housing crisis in San Diego, I'm very disturbed to see that so many developers building in higher income areas—Downtown, Point Loma, Mission Valley, La Jolla, etc.--pay the in lieu fee and bypass the addition of affordable housing to their multi-million dollar developments. A middle to lower middle class area like Clairemont then becomes the recipient of a grossly over-sized project completely out of keeping with the character of the neighborhood.

100-120 units of affordable housing built within the existing 30 foot height restriction would be much more acceptable to the many residents of the area who are afraid (legitimately) of increased traffic, strain on aging roads and infrastructure, overcrowding of schools, and loss of home value.

I urge you to take a short walk down Mt. Etna on a weekday afternoon, starting at Mt. Everest Academy and ending across Genesee at Home Depot. You will find that the neighborhood street of Mt. Etna is already terribly impacted by through traffic avoiding the congested Balboa/Genesee intersection, and is not at all pedestrian-friendly. There's a reason Mt. Etna, Mt. Castle, Mt. Casas and Mt. Durban have had speed bumps for many years now.

I've seen reference to this project being situated on the Balboa/Genesee intersection. This is false. Mt. Etna is NOT located at Balboa/Genesee, nor is it easily walkable or near a public transit corridor. To classify the crime lab project as Transit Oriented Development is stretching the definition of TOD beyond a reasonable interpretation. The closest (future) trolley station is inaccessible by foot and is a treacherous 40 minute bicycle ride along crowded and hilly Balboa Ave. The reality is 10-20 minutes by car or bus. How can that possibly fall under the umbrella of TOD?

Please take the very valid concerns of so many Clairemont residents into account. The crime lab project is far too large for the single-family home neighborhood for which it is planned.

Thank you for your time,

Holly Van Valkenberg

Clairemont/Bay Park resident for over 40 years

San Diego City Council

Community Council, Clairemont area

Regarding the proposed MT. ETNA facility

To Whom it May Concern:

This letter is in reference to the proposed development on Mt. Etna in the Clairemont area.

I am the second of three generations of homeowners in this area. My children have gone to Anderson Elementary on Mt. Etna, and my grandchildren are at Holmes elementary. My children and grandchildren have played and coached at the Mt. Etna baseball field. Our family's pay taxes and vote.

The proposal to build a low income (substance abuse, homeless) housing development in this neighborhood is abhorrent. These are issues that must be considered:

1. There are two elementary schools within 2 blocks of this proposed development. The Mt. Etna little league field and park are within 1 1/2 blocks of this development. Our children should not be exposed to people who are substance abusers.
2. People in this neighborhood have worked very hard for the privilege of living here. Now you are proposing using our tax dollars to allow those who don't work to live here for free.
3. It is proposed to build a 60 plus foot building, although the building codes in the area allow for a 30 foot height limit. What precedent does that set for future building? How can building codes be ignored?
4. The infrastructure will not sustain that many additional people. Traffic, shopping and working will become ever more congested.
5. The past 5-10 years we have been in drought conditions. We were told to save water, which we did, only to have our water be charged at a higher rate. Where is the water coming from for these additional people.
6. Crime will increase, including robbery, murder, and rape. That is not acceptable.

7.Ã Already with only the proposal of this facility, property values have plummeted.

8.Ã This area does not need fixing. It is perfect as it is. We do not need more density, there are apartments available. People walk and ride their bikes everywhere. Our businesses are extremely busy, and don't require more patrons to make them successful. (See Home Depot)

9.Ã It is not broken, please do not try to fix it.

This family neighborhood is not the place for a high density development of any kind, especially for housing the homeless and people who are substance abusers.

Subject: Clairemont Residential Cluster

Dear Mr. Cass,

My name is Jacqueline Cullen, my husband Kyle and I were both born and raised in Clairemont. We purchased our first home in Clairemont in 1999 and reside in a home on the same street that Kyle grew up on. Now neighbors look on fondly as we raise our own children in the very same neighborhood. Our neighborhood is largely made up of people who have lived there since the 70's. These same people, who have contributed to making Clairemont such an amazing place to live, are now distraught over this unfathomable Mt. Etna project, as are the "newcomers" who have only lived there half as long.

We grew up by the rule of the street light. Once it goes on, you get yourself home ASAP. Sadly the conditions of the world are hindering that classic rule. The implementation of the Mt. Etna project would completely obliterate it. We have 3 schools, a community park, baseball fields and a brand new beautiful joint use field within two blocks of the proposed site, all teeming with children. How does this project create a safe environment for them? How could any of us allow our children to "go out and play"? Our innocent kids deserve a childhood that is not riddled with unfavorable neighborhood conditions.

Our neighborhood infrastructure cannot support the addition of these residents and the copious amount of traffic. Not to mention the zoning laws and height restrictions that they are conveniently trying to circumvent.

I agree that the people this is intended to help should get some degree of assistance. However, the people who are trying to slip plan this by the residents of Clairemont, who undoubtedly live far, far away from us, need to look for a location that makes since for all involved. I am a nurse and in my line of work we "do the most good for the most people". I implore "The Powers That Be" to do the same thing.

Sincerely,
Jacqueline, Kyle, Alexandra (11) & Tyler (7) Cullen

Subject: Mt Etna/ genessee Opposition

Hello Marc,

I live in the Clairemont area at a House we own. I am not fond of the idea of so many new units being built in this area.

There is not infrastructure to support this many additional people in this area.

There is not enough parking, even if there was parking available there would most likely be an influx of break ins. I live near Balboa arms, the cars parked on the street there are vandalized and broken into regularly.

I understand the need of low income housing. There is plenty of space in East County. The Clairemont neighborhood already has low income housing available. Perhaps Del Mar or La Jolla could help out with the housing crisis for once.

Subject: CPA/EIR Inquires: Mt. Etna / Crime Lab

Dear Mr. Cass,

I attended the EIR Scoping Input meeting last night. I opted to reach out via email rather than speak at the meeting itself, I felt this format lends itself better to fully articulate my concerns and frustrations than attempting to summarize my thoughts in 3 minutes and have my thoughts reduced to a few bullet points by the minutes recorder. I appreciate your time to read through my points below, which are formatted to address the EIR concerns requested.

=== **OUR BACKGROUND** ===

My wife, Kate, and myself live north of the proposed site a few blocks on Mount Herbert Ave with our 1 year old son. We recently purchased our house in April. During the house hunting process, we looked at a number of other communities and ultimately decided to pay more money to buy a smaller, older house in west Clairemont because we love the residential neighborhood and the exceptional schools (specifically Holmes Elementary). We could have bought “more house” for less money in other neighborhoods, but we wanted to raise our son and future children in a less densely populated, residential neighborhood.

The proposed Mt. Etna Affordable Homes project now severely undermines the neighborhood vibe, and destroys what we’ve work so hard to give to our children.

You’re building a massive *urban complex* in a *suburban neighborhood*. They don’t mesh and the proposed complex is too large and not properly planned — it will be a huge burden to our community.

=== **ENVIRONMENTAL IMPACT REPORT** ===

The EIR has a list of environmental factors that can be a “potentially significant impact”. Unfortunately, the currently propose project checks quite a few these boxes:

- **Aesthetics** - the proposed building doesn’t adhere to the current community guidelines and requires rezoning to make it work. The site must be rezoned from commercial to high-density residential, and the “density bonus” added on top of the adjusted high-density definition pushes the resulting unit per acre to nearly 3x the current limit. In addition, the height restriction of 30 feet or 3 stories also needs to be circumvented. The end result is an ultra-massive complex that dominates and towers over the surrounding area. Literally the definition of an eyesore, which the community plan is aimed at preventing.
- **Land Use/Planning** - the proposed building would reclaim commercial real estate and convert it to a high-density residential complex. West Clairemont is in need non-shopping center commercial real estate to entice entrepreneurs to build restaurants and other community enhancing initiatives. Most of the restaurants are currently fast food options, which fit well in shopping centers. However, this type of setting is not ideal for sit-down restaurants, so the Clairemont Community is losing out on a valuable parcel of land.
- **Transportation/Traffic** - the proposed building will house over 450 units, many of which are multi-room units. Most households having one or more cars/vehicles, equals the potential for thousands of vehicles coming

and going from the complex. A bulk of this traffic will congest Genesee and Balboa, while a large percent will most likely opt to cut through the neighborhood streets, which aren't designed to handle this type of traffic load.

- **Agriculture and Forestry** - the community of Clairemont is already a green-zone deficient community. As it stands, there are only a few parks and green spaces to be enjoyed by a large number of people. Building a high-density residential complex, and then bumping the density up further via the "density bonus", ensures the small Mt. Etna park will be flooded with more traffic than can be handled.
- **Public Services** - the community of Clairemont does not currently have the services necessary to cope with a large influx of low-income, high-need individuals and families. The nearest hospitals are located a 10-15 minute drive with light to no traffic. Getting here via public transportation over 40 minutes. Additionally, support services aimed at the target population don't exist in Clairemont, since this community currently doesn't house an large community of the target population. Additionally, the local schools do not have the capacity to accept a massive influx of new students, thereby severely degrading the current environment.
- **Air Quality** - the addition of a high-density complex, only means more cars and additional public transportation. More cars and additional public transportation, equals more air pollution and a reduction in air quality.
- **Water Quality** - the addition of a high-density complex to a single-family, residential community means the water and sanitation systems will be taxed. San Diego's water quality is sub-par to begin with, so pumping a bunch more consumers of water and contributors of waste water will materially degrade water quality.
- **Noise** - the addition of a high-density complex to a quiet, residential areas will certainly come with more noise and more disruptive environment, with more traffic, more people, in a small area.
- **Recreation** - the community of west Clairemont only has a single, small park (Mt. Etna Park). Adding a high-density complex with little to no outdoor recreational areas, ensures that the bulk of the residents will ultimately overcrowd and overtax the small park.
- **Utilities/Service Systems** - adding a high-density complex, which has a resident count roughly equal to 4-5 city blocks, into a small, single-family residential area will certainly tax the existing utility systems.

=== PROJECT ALTERNATIVES ===

11 sites were originally proposed, two sites were chosen. A 454 unit complex in Clairemont and 185 unit complex Downtown, which means Clairemont is taking over 70% of the unit load. The load in Clairemont is so large, rezoning needs to happen to even make it legally feasible. Instead of dumping 454 units in a community not designed to handle this load, I proposed smaller developments across all 11 sites. If the complex size is reduced, there may be a larger number of sites (potentially more than 11) that might now fit the development profile and better service the target population.

A city-wide and county-wide housing issue, is being thrown on the lap of a single community. The responsibility is everyone's and the burden of helping these individuals is everyone's. One community cannot take the bulk of the load. This model also doesn't adhere to "integrated populations", as the high-density complex would dominant the neighborhood.

Alternatively, the \$25 million dollar fund could be used to procure existing housing infrastructure at a fraction of the cost of new development.

Alternatively, the \$25 million dollar fund could be used to further subsidize rents at existing housing developments to convert “market rate” rental units in areas better suited to handle low-income families and seniors.

=== SIGNIFICANT ENVIRONMENTAL ISSUES ===

All environment factors listed under EIR section have the potential to be significant environment issues. Specifically:

- Schools
- Traffic
- Emergency services
- Crime

=== MITIGATION MEASURES ===

Unfortunately, there aren't many mitigation measures that don't require extensive infrastructure changes, which materially alter the entire community and neighborhood. The only option is to reduce the size and scope of the complex to better fit in the existing community, or relocate the project to a better suited location.

=== FINAL THOUGHTS ===

No surprise, of all speakers at the meeting last night, *not a single one was in favor of the current project*. I think the most memorable moment from the meeting last night is when a community member asked the council members to raise their hands if they had kids (I believe virtually all raised their hands). He then asked the council members to raise their hands if they would like the proposed housing development to be built near their homes — or course not a single member raised his or her hand. To push and bully this project through in its current state is truly and utterly disrespectful and distasteful. You and each of your council members knows that this project is too large for such a small community to burden. Even a professional developer has mentioned to you that the project is "more intense than what appears to be a fit for this site". Please have empathy for our family and our community.

This project needs significant changes and reevaluation. Reducing the size and scope of the project to fit within the site and community is a necessary prerequisite for community support. Additionally, the burden of supporting an at risk population is the entire city and county's responsibility. *As such, the burden and development of affordable housing should be distributed equally throughout the county.*

Thank you Marc for your consideration and incorporation of my concerns and recommendations as resident of the Clairemont Community.

Subject: Move Mount Etna Project to another location

Dear Marc,

I am a mom of 4 kids. I have lived next to all types of people. I have lived right next door to a recovering house, senior citizens, prostitutes, and healthy families. I have observed the Clairemont Community for the past several years. Building this new project is too big for a small area. Adding a possible 1,000 new residents to the corner of Mt. Etna and GenesseE neighborhood is not only hard on the neighborhood, but also the new residents. I can see, adding a Senior citizen community and putting in about 100 new units. Adding over 400 is adding an abundance. Many of these individuals should have space, to live and to grow. If they are coming off drugs and abusive relationships, shouldn't they be living in a smaller community to receive healthier resources? There is plenty of space in Point Loma, Lakeside, Santee, El Cajon. Nice, growing communities where families and kids can grow. The neighborhood schools are not built to accompany this many new families. Adding more people to a community all at once can create trauma. Would you want this project in your neighborhood, be honest with yourself. NO. What makes sense is to add small and separate buildings to the communities. The amount of traffic, the amount of people, the amount of cars, when they are already thinking of building up the Target Shopping Center. I am all for change but thinking on a rational level this large project is not good for both sides of the fight. This project IS NOT HUMANE.

IS there going to be security for all residents, how are Senior Citizens going to feel about young growing families, and individuals coming off drugs. Have you thought about the homelessness already in the community and how it might bring in more activity. There are 3 major schools in the neighborhood and many of the residents want to be able to ride bikes, walk, drive, and feel safe all hours of the day and night. This project should be moved to another location. Move this project to another location. San Diego is a growing city with all kinds of people and I know for a FACT that Clairemont, La Jolla, PB, UC, and anywhere near Balboa Park is already busting at the seams. Point Loma has space. Going EAST and NORTH makes more sense.

Please think about all the people being affected. It's not just about Clairemont and the angry neighborhood residents, but think about the people moving in and the impact it will have on them as well. You're putting, Tigers, Birds, Flamingoes, and Lions in a cage and expecting them to live with each other.

This is something the people should VOTE on. We have a right to be heard and let the VOTES be the decision. Not the money.

Sincerely,
Jamie Heusser

Subject: Proposed project on Mt. Etna

Dear Mr. Cass,

My name is Jane Scanlon and I live on Mt. Jeffers which is near the Affordable Housing Project proposed for the Old Sheriff's Crime Lab. I would like to voice my **STRONG OPPOSITION** to the size and scope of this project.

I attended the meeting Monday night at Marston Middle School because I was very interested in the plans for this site. We are all aware of the need for affordable housing in our area and I am in full support of being part of a new housing development to assist in this need. My shock was the size and impact of the proposed project.

Parking: You want to propose a building with over 400 units with no parking. I am curious where the caseworkers and others will park during the day to provide assistance to those in need at this proposed project? There is a Home Depot across the street. Please look at the City of San Diego information about Mt. Etna and Genesse to find out how many people get hit while crossing this intersection. When I look at your lovely campus in Kearny Mesa I can't help but notice the large parking structure built so no one would park on the street, yet you would put this proposal to us leaving out a very vital part of living in a community. The city of San Diego does have a regulation in regards to multiple dwelling units and parking.

Access to Property: You want to propose a building with over 400 units and only one driveway for everyone to come and go from the property. There is currently a medical building on the corner and it is difficult to get out of the parking lot because of the traffic and you cannot see when exiting the parking lot due to so many cars parked up on the street.

Schools: There are some fantastic schools in Clairemont in which my own children attended which are currently at max capacity for their size. Would you propose to bus the children living in this Proposed Development to other schools when the whole idea of this was to form a community? We have four large schools in a very close proximity to this proposal and the traffic in the morning is already very difficult to negotiate. Sometimes it takes longer to get out of the neighborhood than the whole trip itself.

Traffic: Currently the traffic is already difficult to navigate. When the 805 or 5 are backed up there is heavy traffic on both Balboa and Genesse as people are trying to get off the highways and use the side streets. I use the back roads myself to avoid the main roads. Also, the lights don't line up so you can only go one block at a time before the light changes.

Changing the Clairemont Charter: I find it interesting that this proposal all rests on the changing of the Charter. The height limitations and density are in place to prevent large apartments from lining the streets. If it is changes for this site, it's over. Clairemont is a very central location in San Diego and access to many highways are within a few miles. The reason I moved to Clairemont was that it was already built and no one could come in and build an apartment near my house. We are in the flight pattern of Montgomery field and a plane did crash in Clairemont a few years ago.

Mr. Cass, one of the comments made at Monday nights meeting hit a cord in me. It was a younger man who spoke about moving to San Diego from LA and said he would move out of our neighborhood if this proposal went through. It's been great to see the families move into our neighborhood and start to revitalize our community. This community has been restarted with the efforts of the younger generation and I would hate to lose this part because they don't feel safe to walk in their neighborhood. The size of this proposal is very scary.

I will be attending any future meetings and look forward to a different proposal offered, with parking and input from residents.

Respectfully,

Jane Scanlon

Subject: Mt. Etna crime lab project

There appears to be a bit of confusion. The county says it wants input to this project but it doesn't pay attention to the input it's received. Scoping meetings are not well publicized.

At the September 25th meeting it was stated 4 developers had been sent RFPs. At least one developer said the project appeared to be more "intense than would fit in at the site." At the October 15th meeting, the developer had been chosen. Oddly enough it was the developer who had maxed out the number of units. However all projects shown were nowhere near the density proposed for the Mt. Etna site.

The February feasibility analysis indicates:

An exception to this overlay can be applied for as long as the new structure is compatible with surrounding one, two, or three-story structures.

The analysis included the hypothetical residential program that assumes the maximum of 116 rental units.

A lower-density for sale prototype assumed 15 units / acre for attached townhomes.

Yet the developer chosen has plans for 452 units? An analysis is done for 116 or 61 units and a plan for 452 is conceived?

The mixed income rental prototype with 116 units was deemed NOT FEASIBLE unless demolition costs were underwritten by the county and additional subsidy.

The analysis deemed that transit was fair/poor. However this is a high priority project for the county due to public transportation. Transportation that is fair / poor makes it a high priority?

The county doesn't seem to take into consideration the surrounding area. There is a homeless project less than 1 mile away. There are senior citizen communities within 2-3 miles. There is low-income housing within a mile.

The county interprets the community opposition as NIMBYs. However the community response is due to the fact that we are already accommodating this. The accommodations need to be spread throughout the county. The accommodations should not be concentrated in one area. Nearby residents live in the city, not on county property. The county appears to not want this in its own backyard.

The proposed density is way too high for an area that is already heavily congested. Traffic is a problem now, without additional residential properties.

MTS has approved that underused parking lots could be turned into housing developments.

Alternate sites need to be considered before this project. The Mt. Etna site should be developed as commercial with businesses that will enhance the neighborhood. It should not contain a high density residential project that contradicts the current character of the community.

The county is receiving input. It's just not listening.

To: Cass, Marc
Subject: Concerns about the Mt. Etna Crime lab proposal

Hi Marc,

As I understand it we can send input to you for the next scoping meeting for this project.

San Diego cannot accommodate all of the people who would like to live here. Housing in San Diego has never been affordable. If housing is affordable San Diego will be more crowded than Los Angeles.

Changing the review process for this project from discretionary to ministerial is of particular concern as it allows for decisions to be made without public input.

There is a high pressure gas line bordering the property. Is SDG&E willing to be liable the way PG&E was liable in San Bruno?

There is a homeless housing project going up less than a mile away. Projects should not be concentrated in a geographical area. MTS has approved a plan where underused parking lots can be used for housing. Those areas should be utilized before zoning is changed in another location.

The change of zoning from Commercial to High Residential is with complete disregard for the current residents. Current residents did not buy houses near a high residential zone. Current residents did not want a high density neighborhood. Developers have said the proposed density "appears to be more intense than what is fit for this site." How can the city council ignore these comments?

This area was previously a hospital. That would be more beneficial than additional housing. Keep the area commercial and let the neighborhood be improved.

The county will not subsidize infrastructure improvements to accommodate the project. The current traffic pattern does not allow for an influx of the proposed number of residents. Currently Balboa and Genesee is backed up and traffic cuts down Mt. Etna and other streets. A February feasibility analysis stated that transit in this area is fair / poor.

How can the city and county continue to ignore these inputs?

Regards,
Janet Ingersoll

Subject: Opposed to Mt Etna 454-Unit Proposal

Hello Mr. Cass,

I am a Clairemont homeowner and lifelong Clairemont native/resident who strongly opposes a 454-unit and multi-story residential apartment facility, currently being proposed for the Mt Etna Crime Lab parcel, without actual and preliminary action to ensure an appropriate number of reserved parking spaces to accommodate such a high influx of cars, as well as actual and preliminary action to address infrastructure overload (especially traffic studies and alleviation measures) to support such a large influx of people and vehicles.

Please do not act so unethically as to remove the community's voice, a dedicated Clairemont population that has to inherit the problems and impacts of such a large-scale project. We may not be as wealthy as La Jolla or our basically absent councilmember's neighborhood of Mira Mesa etc, but Clairemont by large, and this household, strongly oppose the county's intention of disregarding and setting aside laws in place to protect citizens' rights, to essentially remove such citizen rights as it finds convenient for its own illegal and unethical purposes. It is obvious to us that this ministerial re-categorization that we hear is about to occur, is to take on brazen rezoning powers where the county is not otherwise allowed to do, and is against the will of the people who actually live and work here. The CCPG exists to protect Clairemont residents and must be a part of the dialogue for the rezoning of this property at Mt Etna Drive going forward.

Do the right thing and listen to the many voices of concern being sent your way. Keep this project as discretionary and not ministerial so we can all remain invested in the changes coming our way with this pending redevelopment plan.

Thank you,
Janet Kneier

To: Cass, Marc
Subject: Mt. Etna Proposed Project.

Mr. Cass,

I want my voice heard regarding the proposed Mt. Etna housing project.

I strongly object to the current plan and oppose the change to the current zoning regulations. Clairemont is a wonderful community of loving residents and involved neighbors. I've lived in the Mount Streets near Holmes Elementary for almost 20 years and we are proud homeowners. We added a 2nd story and remodeled as we hope to live here and raise our family forever. We wish to keep our home value strong and crime rates from rising.

While I understand housing is a crises in San Diego, the current proposal for this project is ridiculous. The density planned and the lack of infrastructure upgrades to the area will create further traffic problems than we've already been experiencing. If you've ever driven down Balboa or Genessee at rush hour, you would completely understand why so many residents are seriously concerned about adding 400+ units to the area. Plumbing and electrical services to the area are 50+ years old. Public transportation routes in the area have been rated poor by recent studies. Crime rates are rising with homelessness and the current proposed population will only make matters worse. Low income families will not be able to afford to buy a \$10 burger from Five Guys or a \$12 meal from one of the other local food restaurants recently placed here. A senior population and senior center sound wonderful, but I feel you are putting those seniors in danger housing them with mentally disabled and seriously low income residents. With no onsite support services to maintain the welfare of these people, you will encounter the same issues that have risen at places such as our own Stratton Apartments.

There are currently already 3 Senior and Low Income housing developments within a 3 mile radius of this newly proposed project. I feel Clairemont has already done its fair share and ask you to either seriously reduce the planned density of this project or house it out of Clairemont all together. MTS recently offered up its unused parking lots for affordable and low income housing. This option seems the best answer as transit will be readily available for those in need. Other areas South of downtown on trolley lines or closer to areas that actually serve the workforce seem more feasible. You need to make this project work, should you wish to create additional similar projects throughout San Diego or you will face opposition where ever you chose to develop.

Please reconsider this proposal or you will face very strong opposition from Clairemont. We may not have had very good representation up to this point, but that will change come November. Rest assured, our voices will be heard.

Sincerely,

Janette Gradyan

Subject: MT Etna

Sent from my iPad. A community park, a modern library, something to enhance Clairemont! Housing density is maxed out! Balboa/Genesee is gridlocked! Parking around the Stratton for the homeowners is a nightmare, a mere block from the proposed project. The ill considered Mt Alifan project is going to bring another poorly managed property to this saturated area. This project is only to make money for the political donors devoid of any enhancement to Clairemont.

Subject: Clairemont Mt. Etna housing opposition

Mr. Cass,

My husband and I both grew up in Clairemont and now own a home and are raising our family here in Clairemont. We are strongly opposed to the Mt. Etna housing project. We already have low income housing within a 1/2 mile of that location. The proposed project allows for way too many units and too many potential residents in a small, already congested area. The proposed 5 story building would be an eye sore for the community. Clairemont has always been a wonderful community and we have worked very hard to become a desired area. We are a community of wonderful and hard working families and this proposed housing will not contribute in a positive way.

To be clear, we are extremely opposed to the re-zoning of the area and the building of low income housing. Our investment in our home and our community is of the utmost importance to us and our family, and we do not want our quality of life diminished because of a project like this.

Jasen & Kristen Miner

Subject: Mt. Etna project

I have been attending Clairemont Community Planning meetings- and am familiar with the concerns about the current developing plans- 1-only one egress 2-insufficient parking and traffic plan for such a large density project.
3- close to schools- safety concerns for close proximity to 50% drug/mentally challenged populations
4- double the population of the local neighbourhood without addressing water-sewer-& electrical grid issues.
5-Overdevelopment without compensating amenities to the area.
The community knows that low-income housing is sorely needed- Alternative sites need to be considered- or the scope of this project must be vastly reduced to fit in with the neighbourhood .
Sincerely- Jeanne Miscikowski

Hi Marc -

I'm a Clairemont resident and I wanted to write and support the project at Mt. Etna and Genesee and any efforts to increase housing density and affordable housing in Clairemont.

We have some NIMBYers in our neighborhood but I'm a proud YIMBYer! We need increased housing density for the good of the city and the planet.

Thanks for your good work on behalf of our community!

Subject: Opposition to proposed Mt Etna Crime Lab Re-development

The plan proposed at the October 15th meeting on the Mt Etna Crime Lab Re-development by Chelsea is not appropriate for that location. The proposed height is over the 30-foot limit, over the approved housing density and is a not fit for the neighborhood.

The proposed plan would be adding the equivalent of a new "neighborhood" to the existing neighborhoods of the Mount Street area without any additional expansion of surrounding facilities. For more than 30 years the City of San Diego (and the County by extension) has ignored any upgrades or expansions of public works (road building, library, water, sewer, communications, power, fire department and police). The first interest of any public development is from the County and the proposal is a big, ugly crappy development.

The Site is already approved for a "116 residential units with a 10,000 square foot neighborhood serving retail component". Instead of requesting that plans follow this description, the County decided to push for over 450 units without any retail. In addition, the County pushed ahead with plan selection without any community input and requirement to keep any plan secret until _after_ approval of a development plan. One of your developers stated this best "Based on the neighborhood location, site layout, potential access and traffic concerns, and with recent community reaction to a planned supported housing development in the area, a300-400 unit project with 140-200 supportive housing units seem more intense than what appears to be fit for this site."

One of the reasons for the County supporting such a high-density development is that it is in a Transportation Priority Area. In accordance with SB743, "Transit priority area" means "an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." But according to one of your provided document, Transportation Amenities Rating (Table 3-8) Transit: 35 (Fair/Poor) -- A few nearby transit options.

Walk: 72 (Good) - Most errands can be accomplished on foot

Bike: 73 (Good) - Class II bike lane. Flat and hilly. {Major hill locations West, South and North added by me}

[RES_DO_CrimeLabFamCtAFHAppA6.pdf]

In addition, there is no new transportation development proposed for the Clairemont Area as part of Chelse plan and The County has stated

that they will not pay for any upgrades. Balbao/Genessee

intersection is one of the most impacted intersections within the Clairemont Area and the Clairemont Mesa/Genessee and Clairemont/Balboa are close behind with poor ratings. This cannot be considered a Transportation Priority with these abysmal rating and Clairemont residents have stated this.

The redevelopment site is only serviced by one drive-way that connects to the Mt Enta Drive street. This street will pass by two schools (one a deaf child school) and one park. This street was not designed to support the more than 3150 addition trips (7 trips x 450 apartments/condos) as it could be used as an outlet to bypass Genessee/Balboa intersection.

The idea for developing this site at laid-out nearly 50 years ago by the City of San Diego and I think it would be appropriate today.

Finding of Fact Resolution No 2861 Amendment (2) states:

- 1) That the proposed use at the particular location is desirable to provide a service which will contribute to the general well-being of the community.
- 2) That such use will not, under the circumstances of the particular case be detrimental to the health, safety or general welfare of persons residing or working in the vicinity, or injurious to property or improvements in the vicinity.
- 3) That the proposed use will comply with the regulations and conditions specified in the Code for use. (what is this Code)
- 4) That the granting of this conditional use will not adversely affect the Progress Guide and General Plan of the City of San Diego. [AUGUST 24, 1970 as File No. 152269, OFFICIAL RECORDS]

I would also like to add that we don't need our 2 favorite shopping areas destroyed for massive housing projects. Our lives revolve around these business.

Our markets, Target, Home Depot, our neighborhood gym and Veterinarian, local favorite stores such as TJMax Vons, Burlington and many others.

Please see my attached comments and concerns for the Mt. Etna Rezone project. CASE # WT-4224097. I feel that this would be a terrible change to the Clairemont Mesa environment and infrastructure. I feel that it would increase congestion and traffic problems as well as causing an increase in crime an parking problems. This is a single family home area and the value of these homes would be greatly affected.

Thank you.

Subject: Mt Etna - not good for our community

Hi Marc,

I live in Clairemont with my family. I own my house. And I chose this neighborhood to raise my family for a variety of reasons. Good schools, safe neighborhood, low follow traffic are just a few reasons.

To be clear, I do not support the proposal for Mt Etna as it is currently outlined. This is simply the wrong answer.

- 5 stories is too high-DO NOT CHANGE the current height restriction
- New high density plan will adversely affect near by schools that are already financially crippled due to repeated annual budget cuts
- Near by streets (esp. Mt Etna) are already too congested at peak hours; proposed high density will adversely affect local traffic and parking
- DO NOT CHANGE CURRENT ZONING
- Density and low income demographics are associated with higher crime rates: The plan put forth has no extra safety measures to off set the possible increase in crime levels that will be a burden to local law enforcement

Subject: Fwd: Morena Corridor Specific Plan: Project #582608 / SHC 20161021

Hi I want to confirm you are receipt of the below email.

Morena Corridor Specific Plan: Project Number: 582608

SCH NO - 2016101021

Dear Mayor and City Representatives,

As citizens, families, and advocates for Clairemont, we strongly oppose the language on p. 327 of the PEIR that does not allow for the character of the community to be preserved. We specifically oppose the language that allows for higher building limits than 30 feet. This has verbally been promised by Lori Zaph and other city officials, but this particular language allows a loophole to change the entire Clairemont Mesa area without the consent of the citizens.

The increased traffic congestion impacts quality of life in the community for residents that already live here and those passing through the major through-fares on Genessee and Balboa. The citizens want to maintain the 30 foot height limit and the character of our neighborhood.

In addition, my neighbors and our household opposes the City's Planning Department "Height Concepts" proposal for rezoning of commercial property of the Home Depot on Balboa Avenue to residential spaces. We are an older neighborhood, and the need to access a major hardware in proximity is a necessity in the neighborhood as something is always in need of replacement. While there is an Ace Hardware in Clairemont Square, the store does not supply the magnitude of the items needed that Home Depot does. The other nearest major hardware stores are in other majorly congested areas in Mira Mesa and Mission Valley. Removal of this store will strongly impact the quality of life for existing residents, not to mention the impact on lost jobs in the community.

For similar reasons, we also oppose the rezoning of commercial space to residential on Clairemont Drive and Balboa Avenue. It is the mayor's priority to handle homeless problems, and removing the Good Will is a job loss to those recovering from homelessness and addiction. In addition, Harvest Market is also located in that shopping Center, and it is one of the only locally owned grocery stores left in the neighborhood. Not only will we be sitting in traffic for the additional proposed homes, the loss of jobs will also impact our residents.

As working parents, any additional time sitting in traffic is time that we cannot spend with our families, I'm sure we can all agree that healthy communities begin with healthy families. The last thing the residents of Clairemont want is another congested Rosecrans and University Town Center area. Please take into consideration the residents of Clairemont and prioritize growth in another area of the city.

Kindest Regards,

Stephen and Jessica Bowlin and residents of Clairemont

5255 Mt. Etna Re-Crime Lab

Clairemont Mesa Community Plan Amendment and Rezone Project

Case No. WT-4224097

NOTICE OF PREPARATION PUBLIC REVIEW PERIOD

September 10, 2018 through October 19, 2018

PUBLIC SCOPING MEETING COMMENT SHEET

Tuesday, September 25, 2018

COUNTY OF SAN DIEGO

DEPARTMENT OF GENERAL SERVICES

5560 OVERLAND AVE

SAN DIEGO, CA 92123

WRITTEN COMMENT FORM

As a resident and home owner in Clairemont, I am not opposed to a new residential development at the 5255 Mt Etna location PROVIDED the development plans follow the existing zoning guidelines which allow for retail/residential properties with approximately 107 residential units. This would be a reasonable number of units and residents to incorporate into the neighborhood. However, it appears that the proposed plan includes up to 454 units with up to 1,200-1,800 total residents! It is appalling to see how SD city and county government scheme together to try to change existing zoning for property in order to fit government needs and without consideration of how these changes impact neighborhood residents, in this case, Clairemont residents. City and county governments are trying to hastily 'ramrod' these changes in place. For any such city/county development planning, it is crucial to include representatives from the neighborhood to be part of the planning committee and from the very beginning.

One of the main purposes of government is to keep people safe. With the proposed development plan for the 5244 Mt Etna property, the safety of Clairemont residents is in jeopardy and does not appear to be addressed. Based on the proposed plan of 454 units, with up to 1800 residents, how will the following topics be addressed in order to ensure the safety of Clairemont residents? **Traffic** in the Balboa/Genesee neighborhood is already heavy and this increase in residents will greatly expand the amount of traffic and may result in additional accidents, noise and pollution. Will there be adequate onsite **parking** for the residents of the new property? Or, will these residents be parking on our neighborhood streets? Also, how will possible increases in **crime, loitering and fire** be handled? Are there any plans for additional law enforcement and fire stations in the area?

We want to keep our Clairemont neighborhood safe, family-friendly and quiet. The current proposed development plan does not meet our neighborhood criteria.

Subject: Mt. Edna Project for Low Income

Attn: County Supervisors and SD City Council

Once again I am writing to you in protest of the planned development at Mt. Etna and Genessee Ave. A facility with up to 500 units, 465 parking spaces, 800 to 1000 residents, and five stories in height in an unconscionable thought process in the minds of the County Supervisors. You are stripping our neighborhood of tranquility, low crime rate, a wonderful place to raise our children, and a great deal more traffic in our neighborhood. Some of our homes abut the property that you are planning for this massive project. Our homeowners will face constant disturbance of traffic, cars coming and leaving the facility, but most of all the lack of privacy from a five story building directly in back of their homes. But it's not just the homeowners that abut the property, it affects all of Clairemont. We are taking the brunt of your ill planned need to place low-income residents throughout the city and county; not to over burden Clairemont with so many. Please tell me where any other facility this large has been planned elsewhere in the city or county. Are they in your backyard? Of course not! After all you're a great politician in our city and county of San Diego; you can vote out anything that threatens your backyard. Most of your constituents have little say in anything that involves our homes and livelihood.

The location is on a very busy Genessee Ave., that connects with Balboa just a short distance away. It makes the residents of this planned facility vulnerable to noise, heavy traffic with greater chances of accidents to the residents and their children. It will create a bigger problem of traffic through our neighborhood. Already cars from Balboa cut through to Mt. Castle Ave. and Mt. Everest to reach Mt. Etna and Genessee. They do this to avoid the long stop light at Balboa and Genessee. What do you think these 465 owners of the facility will do? You guessed right! They'll cut through our neighborhood. And why would you place vulnerable citizens on a noisy, busy thoroughfare to start with. To rehabilitate, or just to house low income seniors one would think a not-so-busy location would be more conducive to very well being.

Last, but not least, I am concerned about some of the residents that would be living in this facility. Low income Seniors is one thing. I am a Senior and I can sympathize with those whose income is so low they don't have a place they can call home. But it's the other 300 units that concern me; specifically the 52 units planned for developmentally disabled...some of which are alcohol and drug abusers, and others that are mentally disabled. They'll be out walking our streets, along with all of the other residents. Will our homeowner's in our neighborhood feel that their children could be at risk? And what about the school that is less than a block away? I wonder how the Board of Education feels about this planned project. Or, are they even aware of what is planned? DO WE NEED A POLICE PATROL to

monitor the additional traffic, perhaps an increase in crime rate, and an influx of pedestrian traffic on our streets?

How about some answers to our questions? How about setting up meetings far enough in advance that we, the residents, have an opportunity to plan to attend these meetings? How about all of the County Supervisors coming to our meetings to hear our concerns? How about Ron Roberts walking our streets to see for himself what we have done to improve our homes, our neighborhood, and to raise our children in one of the best locations in the city?

I am 85 years old. I have lived in this one-and-only home since December 1957. I love the home, the community of Clairemont, and the convenience of everything: freeways, medical facilities, and stores that offer everything within blocks of where I live. It's a wonderful place to raise a family. Please don't ruin it for the Clairemont citizens. 500 to 1000 additional people at Mt. Etna is overdoing it. Think again Supervisors.

Subject: Fw: Proposed Project at Mt. Etna and Genessee Ave.

It would seem that our County Supervisor's have little concern for the people that established this community of Clairemont some 62+ years ago. The Clairemont area is central to every freeway, and is coveted by many as an ideal location for establishing a home and raising a family. I have lived in my 'one and only' home for 62 years, and have loved this area for all of it's conveniences.

Now the County wants to turn the Crime Lab into a low income home for as many as 500 to 800+ individuals. This will be a major impact on the citizens of this community. The county has said they will house low income seniors, veterans, substance abuse (alcohol and drug) and mentally ill individuals. They want to raise the height limit for building the project. I, and most of my close neighbors, are totally against this project.

First off, it will greatly impact the neighbors who live on Mt. Castle Ave. and whose houses abut the parking lot of the Crime Lab. With a higher structure, the residents of that structure will be able to look directly into the backyards and houses of our neighbors. This is totally unacceptable. Our good neighbors have put thousands of dollars into remodeling their homes, and expecting that this will be their home for many years to come. Many of them have young children, and they are expecting, like my husband and I did many years ago, that the neighborhood is safe for playing, and basically a crime free neighborhood.

Now with so many moving into this planned project, some very good people I'm sure, but some we might be dubious about, is causing much anxiety among the residents of Clairemont. When these folks decide they want to take a leisurely stroll where do you think they might want to stroll? Not along busy Genessee Ave. when traffic is racing by every hour of the day, and it's so noisy. They'll want to stroll along our streets that are within close proximity of their establishment, and OUR HOMES. We're not talking about a few people walking out streets, we're talking about possibly in the 100's. I fear there could be an uptick of crime on our streets, which has been almost nil up to this point. And what about the congestion of extra traffic, and parked vehicles on our streets?

I expect each and everyone of you can see the dilemma and frustration that this project is causing to the citizens of Clairemont. I also expect that all of you will fight against this proposal. Politicians should not be able to do anything they want to do without consideration of it's citizens, and on this project the citizens say NO.

Subject: HUGE Problem with: Mt Etna Crime Lab Project Rezone Project [WT-4224097]

How did this happen: Re-zoning of our community should not be done without our input.

“The County has submitted a request to the City of SD for rezoning (as an amendment to the Community Plan) and to the Clairemont Community Planning Group (CCPG). Normally, the CCPG would listen to the request, review, and provide a recommendation to the City. What is concerning in this case, is that the request for rezoning is also asking the City of SD to change the review process from a discretionary to a ministerial review. This change in review will remove the CCPG from the process. The CCPG is the voice of the Clairemont community. If approved by the City of SD, changes that need to occur - in height, for example- a city staffer would approve, instead of requiring a recommendation from the CCPG. The reality is the SD City Council can ignore our recommendations, but it will be seen as ignoring their voters and devastating to Clairemont and to the Mt Etna neighborhood.”

Why was this important step bypassed?

-Why did our representative Chris Cate not speak out and ask the Clairemont families BEFORE pushing this through?

-What is in this project for Mr. Cate? He is our representative, so how does he benefit from this? (Certainly not looking for votes from Clairemont voters. Certainly not ours.)

As we understand it: Four acres of land will house units for 400+ individuals and families and the properties will have a 99 years lease:

It will be home for recovering addicts, the homeless, mentally challenged adults and low-income FAMILIES.

Questions that need answers: This will be a diverse group of folks living in close proximity to say the least. So the questions are:

-Who will GUARANTEE strict screening requirements for ALL tenants will be in place BEFORE they move in. (No gang affiliations, no felons, etc.) and continue strict screening as new “tenants” move in?

-What kind of on-site protection will be available 24/7 for any and all of the groups or individuals?

-What kind of safeguards will be in place for the residents in our part of Clairemont?

-Who will maintain these properties – outside and inside?

- Who is paying the rent? Who is paying the SDG&E bills? Who is monitoring and paying the water bills?
 - How is the parking situation for 400+ units being addressed?
 - How is the added traffic that will occur being addressed?
 - What is being done about re-enforcing the infrastructure i.e. streets, old water mains, sewers, power etc.
-

Subject: Clairmont Mesa Community Plan WT-4224097

Hi Marc,

I am writing you as a new resident and homeowner in Clairemont in protest of the planned rezoning and project for 5255 Mt. Etna Drive.

One of the many reasons my wife and I decided to move to Clairemont was because of the low density homes and traffic, strong family values, and beautiful community. Having grown up in San Diego and attending USDHS, Clairemont has always been where families lived. After spending the last 4 years as a resident and condo-owner in East Village, I can tell you that high density, low income housing is NOT conducive to a safe or quiet family community.

My wife and I are both very progressive, and both believe there is a housing, livable income, and homeless crisis that needs to be addressed. We also both believe that the proposed project for 5255 Mt. Etna is NOT the answer to that problem. In addition to creating excess traffic congestion and packing the streets with more parked cars, this project will reduce the surrounding home values and introduce individuals to the community who will neither benefit the current family culture, nor benefit from it (the real goal for helping low income housing qualified individuals).

Please reconsider this project and rezoning. There are myriad other solutions for that plot, and for those who need housing assistance.

Sincerely,
Joe & Katie Furfaro

Mr. Cass,

Please send an email Reply, to acknowledge receipt of my EIR comments.

Please also tell me the purpose of the next Planning Commission meeting. Is it still November 20, as you told us at the second Scoping meeting? Is there a link for more information?

When will the EIR be completed? How can I get a copy?

Thanks.

Subject: Comments for the EIR, Clairemont Mesa Community Plan Amendment and Rezone, Project WT-4224097

Mr. Cass,

I am very concerned about the Mt Etna Crime Lab project. I expect negative environmental impact regarding:

- !Ã Traffic,
- !Ã Public safety,
- !Ã Noise,
- !Ã Utilities,
- !Ã Recreation,
- !Ã Walkability,
- !Ã Air quality (Climate Action Plan),
- !Ã Parking,
- !Ã Schools,
- !Ã Businesses.

Perhaps you've seen the News 8 video from the second Scoping meeting on October 15, 2018. Most instructive is the footage showing the line of eastbound cars on Mt Etna Drive, waiting for the signal light to change. That's why I've included the link.

<http://www.cbs8.com/story/39291824/clairmont-residents-oppose-affordable-housing-project>

This is a residential street, with just one lane in each direction. At the corner, there's a second right-turn-only lane. The primary lane is for cars that want to either turn left onto Genesee Avenue or go straight into the Home Depot parking

lot. Persons turning left must wait for oncoming traffic going straight, on Mt Etna Drive, into the neighborhood from the Home Depot lot. This is a busy intersection. During peak traffic times, cars traveling east wait through several signal light cycles.

At the October 15 Scoping meeting, Chelsea explained that they'll build a parking structure for 465 cars. There will be a single entrance and a single exit ... for 465 cars! Just an entrance/exit on Mt Etna Drive! Look at the News 8 video. It shows a line of cars that extends past where the parking structure exit will be. How long will it take for cars to get out of the parking lot? This will be like getting out of the old Qualcomm Stadium parking lot after Chargers games.

Here are other thoughts concerning the Mt Etna project.

1. The most important considerations are (in order of importance): population, parking, aesthetics.
2. I have experience with section 8 family housing, where residents were at the low end of the
3. This is the third affordable housing project within a half mile. That's really a lot for one neighborhood to absorb. Other projects: Stratton (apartment complex, 300+ units, converted to affordable housing by Wakeland) and 5858 Mt Alifan Drive (52 homeless units, in progress). Again, the Mt Etna Crime Lab project is slated to be the LARGEST affordable housing project in the history of San Diego. This could easily be 1600 people. Supervisor Roberts' office says that a 3-bedroom affordable housing unit is designed to house up to eight people.
4. At 404 units, this will be the **largest affordable housing project in the history of San Diego** (eclipsing, by over 30%, the previous largest – Civita, in Mission Valley, where 306 units was a tiny fraction of a 320-acre housing development). Plus, Civita got a much less risky affordable housing population than what Chelsea is proposing for Mt Etna Crime Lab.
5. Lots on Mt Castle Drive (western edge of property, on other side of power lines) may never see anything but late afternoon sunlight again.
6. Extreme density will cause noise problems. There will be insufficient recreation space for the many children. The neighborhood library won't be able to service a doubling of the neighborhood population.
7. A population of addicts, severely mentally ill, recently homeless, and felons will certainly cause safety concerns at Mount Everest Academy, one block away. Holmes Elementary will be unable to handle the influx of students.
8. Addicts increase crime in any neighborhood where they live, especially when there are lots of them. Parents, teachers, and neighborhood residents will worry about needles and drug dealing at Mt Etna Community Park (3 blocks away). People previously inclined to walk will be pushed back into their cars, out of safety concerns.
9. Water, sewer, gas, and electric lines were installed in the 1950s. They were designed for a neighborhood of single family homes. It doesn't make sense that Chelsea could double the number of neighborhood residents (no infrastructure improvements) without adversely affecting quality or reliability of service.
10. 465 parking spaces for 404 units (some 2- and 3-bedroom, low income families as population) won't be nearly enough.

Air quality (Climate Action Plan) concerns call for more walkability and getting people to work/shop/dine near where they live. However, the proposed sandiego.gov Clairemont Community Plan https://docs.wixstatic.com/ugd/a513cc_b532ee32a1544ae8b9d2a923c820a74a.pdf seems to replace our neighborhood shops (e.g. Home Depot and Target) and restaurants (e.g. Panera and Five Guys) with yet more high-rise, high-density housing. Children appear in the concept drawings. Surely, they and their parents won't travel, everywhere they go, on the #41 MTS bus (rated "Fair/Poor" on page 20 of the February 2018 Affordable Housing Phase II Feasibility Analysis). It seems as if the City wants to re-purpose every single parking lot in Clairemont for (probably affordable) housing.

Page 6 from another version of the new, proposed Clairemont Community Plan

https://docs.wixstatic.com/ugd/a513cc_30e262f6823f46d8a1452120b1e31d9e.pdf

shows Transportation Priority Area designation for much of Clairemont, which means developers can avoid providing adequate parking. I'll focus specifically on the Mt. Etna Crime Lab development since that's the EIR topic. We know that people won't really give up their cars. So, where will people park? This is a rhetorical question. The obvious answer: in

business parking lots (so no parking for customers), in school parking lots (like Mt Everest Academy, one block away), and in single-family-home residential areas (many square blocks, every space taken).

Please consider the City of San Diego Sewer Design Guide published by the Public Utilities Department.

<https://www.sandiego.gov/sites/default/files/legacy/mwwd/pdf/sewerdesign.pdf>

On page 1, it discusses what's required for large scale projects like the Mt Etna Crime Lab site. Keep in mind that this project will double the neighborhood population. Notice the word, "shall" (i.e. strong assertion), in the Guide's text. "Project applicants shall contact the Public Utilities Department Senior Civil Engineer when the wastewater flow estimates of individual areas planned for development generate more than 5 percent of the wastewater stream at the point of connection with the City's list of critical sewers. The intent of this requirement is to ensure that flows from new projects will not adversely affect the downstream conveyance systems operated by the City and to ensure that previous studies have accounted for those flows in the design of the City's downstream conveyance systems." Will the EIR provide detailed sewer diagrams and proof that all (not just neighborhood) "downstream conveyance systems" won't be impacted.

I spoke face-to-face with San Diego Unified School District board member Dr. John Lee Evans. Like us, he's concerned about the Mt Etna Crime Lab project. Dr. Evans has asked Superintendent Marten to investigate. I'd expect that the County will hear from her office and/or the SDUSD legal team soon.

I spoke with someone in Todd Gloria's office. They seem to be concerned about the possibility of Clairemont getting steamrolled.

Nearby business owners seem to be concerned. If new Mt Etna Crime Lab tenants take over their parking lots, then where will their customers park?

You asked for suggestions.

My best suggestion is for the County to sell this property and parlay the (substantial amount of) money into a larger, more suitable site for the type of project you want to build. Tommy Hough, City Council District 6 challenger, suggests a location within an industrial park area. Some such areas are near transportation centers.

My second-best suggestion (presented by someone at the first Scoping meeting): turn the Mt Etna Crime Lab site into a care center for Alzheimer's patients. This will meet a community need.

If the County persists in developing the site, I suggest the following (a WIN for both the County and community):

- 1.Ã Make it clear (to Chelsea and the community) that addicts, felons, homeless, and the mentally ill will **not** be part of the population. We want the neighborhood to feel safe. The site is one block from a school and 3 blocks from a park. Mt Etna Drive is the gateway to our neighborhood. Mothers push baby strollers to the shops. Children walk to the school. Residents walk and ride bicycles. We want this to continue. Unfortunately, HUD won't allow Chelsea to require participation in treatment programs to be a condition for housing.
- 2.Ã Insist that the **entire** family affordable housing component be 60-80% of AMI population. This will make a huge difference. From what I understand, tax credits would still be available. Stress (same as in Civita news releases, amount/month even estimated) that tenants will be paying rent, just less than market rate. This population (in contrast to very low income) will help us keep the shops and restaurants we love viable. This must be in the contract, so Chelsea can't renege on the agreement and place higher risk populations at Mt Etna Crime Lab.
- 3.Ã Even if a Transit Priority Area designation allows less, require Chelsea to provide one parking space per bedroom (no fudging by calling a bedroom a "den"), plus a reasonable number of visitor (full size) spaces.
- 4.Ã If it helps ratios, allow
- 5.Ã Dramatically reduce the number of Mt Etna Crime Lab housing units. Consider a population that's not 100% affordable housing. Market rate units on the top floor could have a spectacular view and return more money to the County.

6. Don't make any drastic changes to the Clairemont Community Plan. If the Mt Etna Crime Lab site deviates slightly from the Clairemont Community Plan, get a one-project variance rather than authorization through a new Plan. Don't dramatically change the character of Clairemont. Allow us to keep our shops and restaurants.

Cc: Toomer, Charista; ChrisCate@sandiego.gov; kevinfaulconer@sandiego.gov
Subject: Mt Etna Project Scoping Input

Dear Mr Cass, Mayor Faulconer, Supervisor Roberts and Councilmember Cate,

As I see it, the proposed Mt. Etna project has two communities that it would serve: those housed in it and those residing around it. In its currently proposed configuration, I see it as a detriment to both communities, which would result in a huge failure for all concerned.

Many residents have adequately voiced how 400 plus units in a 5 story complex would be a detriment to the Clairemont area due in part to traffic, limited egress, safety, inadequate infrastructure, and mass transit concerns, all of which I agree.

However, I am not convinced that enough support could be provided for the complex's occupants in such a dense population that they would be safe, let alone have quality of life. As a result, this project has the potential of being a lose-lose situation.

Instead of trying to achieve maximum density, I hope a more manageable project that effectively serves both communities, will be considered. If this project was rescaled and well-supported so that it was beneficial to both communities, it could potentially be pointed to as a shining example of what to do instead of what to avoid, and potentially be a model to replicate.

Why can't we work toward making this a win-win situation for all those impacted by its development?

Regards,
John Wagner

To: Cass, Marc
Cc: Jordan Zavislak
Subject: Case No.: WT-4224097

Marc

My name is Jordan Zavislak and I live at 4343 Mt. Castle, directly adjacent to the proposed site.

Per your EIR, please address the following issues and how the county intends to mitigate them in a manner satisfactory to the local residents:

- * **Crime:** increased people will bring increased crime. Your reports needs to provide adequate statistical data to show crime will not increase. If it's found crime will increase, the county must subsidize the city for additional enforcement. My car was broken into this past Monday, so crime along this corridor is a real issue.
- * **Traffic:** I have 3 small Children and was forced to fence in my front yard because cars routinely drive in excess of 40 mph down the small street cutting through to Home Depot. The cars always bottom out on the speed bumps. Not only is this unsafe for my children, but it also causes unnecessary wear & tear to our already substandard city infrastructure. Also, how will the county force the city to improve traffic flows, road improvement, and congestion? This is a very significant issue give the lack of good public transportation exists in the area when better sites with better public transit were passed over.
- * **Rights to Quiet enjoyment:** your report my insure my privacy is always protected from visual intrusion by the development. This would be impossible with the proposed 6 stories. It must be smaller. Additionally the demising wall that seperstes my property from the site must be higher to mitigate sound pollution.
- * **Schools:** This project will not significantly increase the property tax base and will lower the value of our homes, decreasing the property tax base further. The decreasing proceeds will put further burden on the schools as attendance will inevitably increase. How will the county subsidize the school district and mitigate this issue.
- * **Other Sites:** there are better sites for this project. The EIR must address the other sites and explain why and how the county decided to accept RFP for an inferior site, when better sites exist.
- * The new development must be sustainable with a LEED certification.

I vehemently oppose the project. I'm in support of redevelopment under the current zoning. An assisted living type use is the perfect fit and would mitigate all the issues listed above.

Jordan.

Subject: Fwd: Mount Etna Low Income Project - Upset Clairemont Resident

October 18, 2018

Marc Cass, County of San Diego, Department of General Services

Chris Cate, District 6 City Council Member, San Diego City Council

Naveen Waney, Chair, Clairemont Community Planning Group

Hello,

I recently learned, by word of mouth, of a plan to cram in a massive 400+ low income unit complex into a tiny 4 acre lot off Mount Etna. Every single house in our neighborhood is a single-detached dwelling... and has been since inception of our neighborhood. I honestly have no clue how someone dreamed this plan fits within the character of our neighborhood. There is a reason why this land was zoned for commercial use only; it was NEVER intended to be residential... especially not a giant 5-story complex.

The number one priority, when planning a project of this nature, should be to safeguard the essence of the target neighborhood. This project doesn't do that. This project actually tears at the very fabric that makes our neighborhood so great. This project is exactly why we didn't buy downtown or in University City. We bought here because this area wasn't built up. What's being shoved down our throats essentially doubles the number of residents of our neighborhood by shoehorning in this behemoth complex into a tiny lot that was NEVER intended for residents. IT DOESN'T FIT HERE!

We don't want this project for a number of reasons:

Traffic congestion. Traffic here is already a bit tough to manage. Cramming in 1500+ additional people is going to make our neighborhood really frustrating to navigate... and will potentially double my commute time.

Elevated Crime. Crime is ALWAYS higher in low income areas. I'm certain the majority of people set to live in this complex would be lawful... we all get that; unfortunately, a high percentage won't be. Crime in our neighborhood is pretty low today, but your plan would drastically increase the crime rate. We feel safe in our neighborhood today, but that'll change with this proposal.

Commercial Zoning. The zoning for this area is not conducive to this plan. This land is not zoned for residential use. We are NOT open to a change in the zoning.

Single Entrance. Looking at the plan, there's only one entrance. Seriously?

Public transportation. I'm guessing the majority of people housed in this proposal would utilize public transportation, yet the bus system in this area is pathetic at best.

Five stories. The size of this project is completely absurd and doesn't fit the character our single-family detached home neighborhood.

Real Estate Values. This plan will absolutely cause our real estate values to tank.

I have to bring up communication on this project. This part is pretty infuriating. The communication from the County... or the City for that matter is an absolute train wreck. The fact that this project kicked off months ago and we just learned about it on Monday is stunning. Seriously, what's wrong with this picture? At a meeting we attended on 10/15 it was stated that notices were mailed out... yet only two of roughly 100 people who attended the meeting received these notices. If notices were going out, and only 2% of the people received them... where did the other 98% go? The perception doesn't look good... and actually seems pretty suspect.

Look, I know there is good reason to push for these projects... and I'm sure your hearts are in the right place... but shoving a project like this down our throats... into a neighborhood of single family detached homes is just awful. The fact that I need to point that out is pretty unbelievable.

What little time we have left will be spent trying to get the word out. EVERY resident I've spoken to in our neighborhood is completely against this plan. Every single one. I'm hopeful the County and City will reconsider another area where this project actually fits. The Mount Streets of Clairemont is NOT the right fit.

Sincerely,
Joseph Ortega

Subject: Mt. Etna rezone project

Sent from [Mail](#) for Windows 10

As a resident of Mt. Etna 's Clairemont area, I am against the idea of the rezoning of Clairemont to fit a 5 story large apartment building near Mt Etna and Genesee St. corner There are times now that the corner gets very crowded with traffic so that long lines form way down Mt. Etna and many side streets' crossings are blocked due to traffic at traffic light. There was good reason for the initial zoning to be limited to 3 story buildings because Clairemont has many narrow streets that were never meant to accommodate heavy traffic. Even an allowed 3 story apartment building will increase the traffic problems at the named corner, along with increased air pollution from cars running their engines while waiting there. We will have to tolerate the effects of a smaller 3 story building there , so please don't make our lives miserable with a 5 story building at that spot. Thank you for considering these thoughts on the issue.

Josie Hill (4359 Mt Henry Ave.)

Subject: Mt. Etna Project at County Crime Lab

Hello Mr. Cass,

As a resident who resides very near to this location I am quite concerned regarding the number of units proposed for the Mt. Etna site in Clairemont. My primary concern is traffic on Genesee. The evening commute down Genesee is already quite congested, adding hundreds of units to this part of Genesee will most certainly increase the traffic and lengthen commute times.

My objective with this email is to ensure that we as Clairemont residents will have input on the scope, height and number of units for the proposed site prior to the city moving forward with any permitting.

I look forward to hearing any updates you may have.

I appreciate your time,

Julee

Subject: Crime Lab on Mt. Etna

Dear Mr Cass,

This proposed development is a bad implementation of social assistance in our community. I will refrain from any further detailed comments since it would be redundant. I stand with the majority opposing the development for all the same reasons.

If this plan to construct 400+ residential units continues to completion I fear it will be a massive failure. Failure in the form of lack of civility, respect and quality of life. San Diego has developed a reputation of being a calm and easy going culture. We are fortunate to have lived in this city and to have seen it grow from a few neighborhoods into the city we now see today. Increasing the population with people who need special attention due to alcohol and drug addictions will impact the life we have known and respected. I am not opposed to providing care for them. I am opposed to the location and the massive size being proposed. There are other locations and facilities available.

I am aware of a situation that you should review, if you haven't been made aware of it already.

<http://www.latimes.com/politics/la-pol-ca-homeless-housing-bond-stalled-20180301-story.html>

It's tragic that money has become such a political issue. I hope there will be a resolution to all these problems soon and I hope we can maintain our San Diego culture by not over populating our neighborhoods recklessly.

Thank you,

Julian A. Pena, Jr

Subject: Mt. Etna impromptu survey.
Attachments: Survey from Community.docx

Mr. Cass,

I just wanted to let you see what a very small survey was able to highlight. This is a very non-scientific low tech survey. I threw it together and got it in a very short time. It was broadcast on Nextdoor/Facebook and email link. We did have a person that tried to rig/ruin the results by not applying to social honor system, so I was forced to remove multiple results from already used ISP addresses. Due to her comments and admissions, and the average time of the survey users, I removed any results from surveys that took less than 40 seconds. The average time for utilizing the survey was over 1 minute 15 seconds even with the multiple quick, false results. The results are really not that different before or after.

Please note that they do not directly reflect what the current proposal, it merely reflects the zoning/community plan aspects.

My personal opinion is already known by you. The current proposal is NOT a good fit for the community.

These are my requests for the project:

- A development with a 3 story max.
- A least 50% market rate rentals
- Standard parking spots per code
- Retail space as outlined in the original RFP
- Community room or funding to increase size of Balboa library.
- Additional egress and ingress
- No more than 250 units.

Thank you for your consideration.

Julie Wilds

Subject: Mt. Etna Project

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

<input type="checkbox"/>	Aesthetics	<input type="checkbox"/>	Agriculture and Forestry	<input checked="" type="checkbox"/>	Air Quality
<input type="checkbox"/>	Biological Resources	<input type="checkbox"/>	Cultural Resources	<input type="checkbox"/>	Geology/Soils
<input type="checkbox"/>	Greenhouse Gas Emissions	<input type="checkbox"/>	Hazards and Hazardous Materials	<input type="checkbox"/>	Hydrology/Water Quality
<input checked="" type="checkbox"/>	Land Use/Planning	<input type="checkbox"/>	Mineral Resources	<input type="checkbox"/>	Noise
<input checked="" type="checkbox"/>	Population/Housing	<input checked="" type="checkbox"/>	Public Services	<input type="checkbox"/>	Recreation
<input checked="" type="checkbox"/>	Transportation/Traffic	<input type="checkbox"/>	Tribal Cultural Resources	<input checked="" type="checkbox"/>	Utilities/Service Systems
<input type="checkbox"/>	Mandatory Findings of Significance				

Dear Marc,

I am writing to inform that I am against this project changing zoning from its existing community master plan as well as to increase the density to create 450+ units at this location.

Unlike other parts of san diego, we do not have an updated traffic control system that will help with ease of traffic flow.

Additionally, school buildings in Clairemont is in a dire need for an update. Kids are studying or trying to without AC. with 100% extremely low income units being put there, schools will get even less \$\$ to provide service to even more students as these units will not be bringing any type of revenue back to the community, especially to the schools and senior centers.

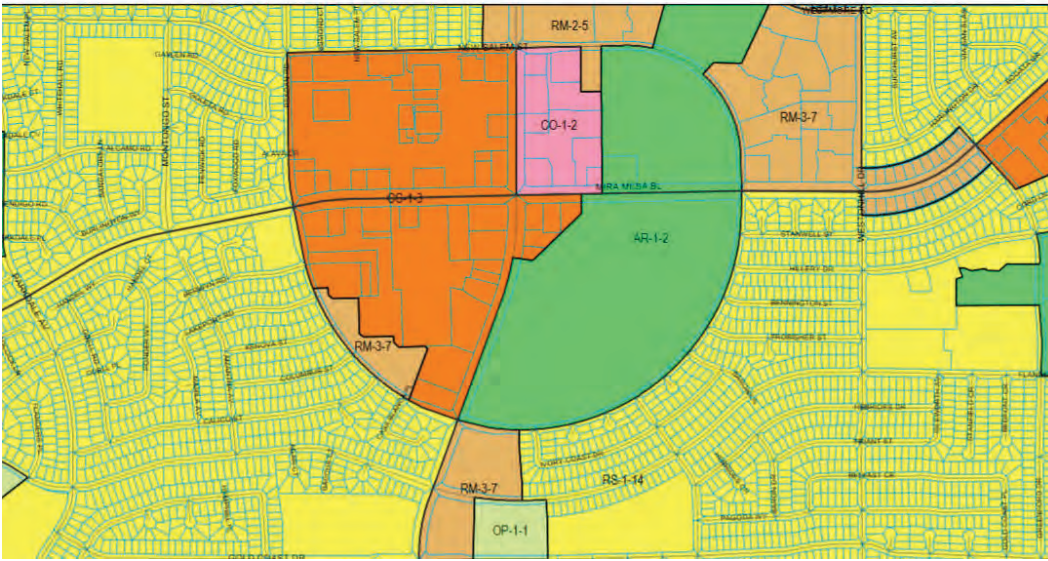

There is an alternative that I would like for your to consider. build the low income housing at Mt. Etna, however do not go beyond its original unit restriction but to build a secondary building in Mira mesa- Epicenter to be exact.

If the lot is already owned by the city and is vacant and you are currently seeking RFP, shouldn't this site be considered first to address the homeless concerns and/or housing crisis that goes hand in hand with homelessness?

We all count 2017 data clearly shows Mira Mesa having the highest homeless count in the City of San Diego District 6 (47.18 counted), followed closely by Kearny Mesa with count of 40.84, and half of that in Clairemont with 23.94.

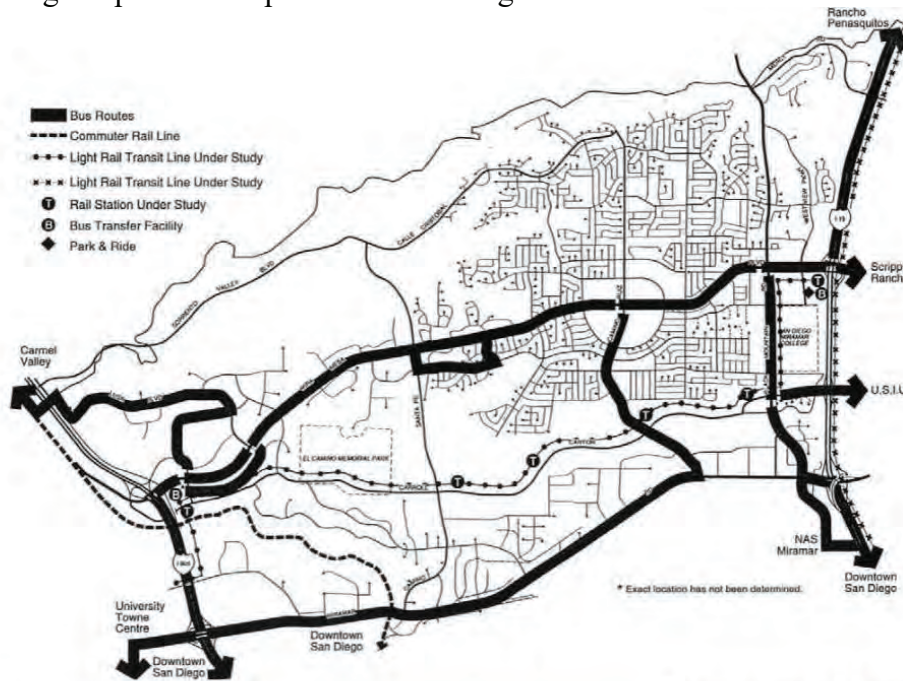

As you can see below, 8450 Mira Mesa Blvd, San Diego, CA 92126, former epicenter/ also former public library is zoned immediately next to **CO-1-2**.

Official Zoning Map

Looks like this is a public property and is already vacant and can move forward with addressing the city's big problem.

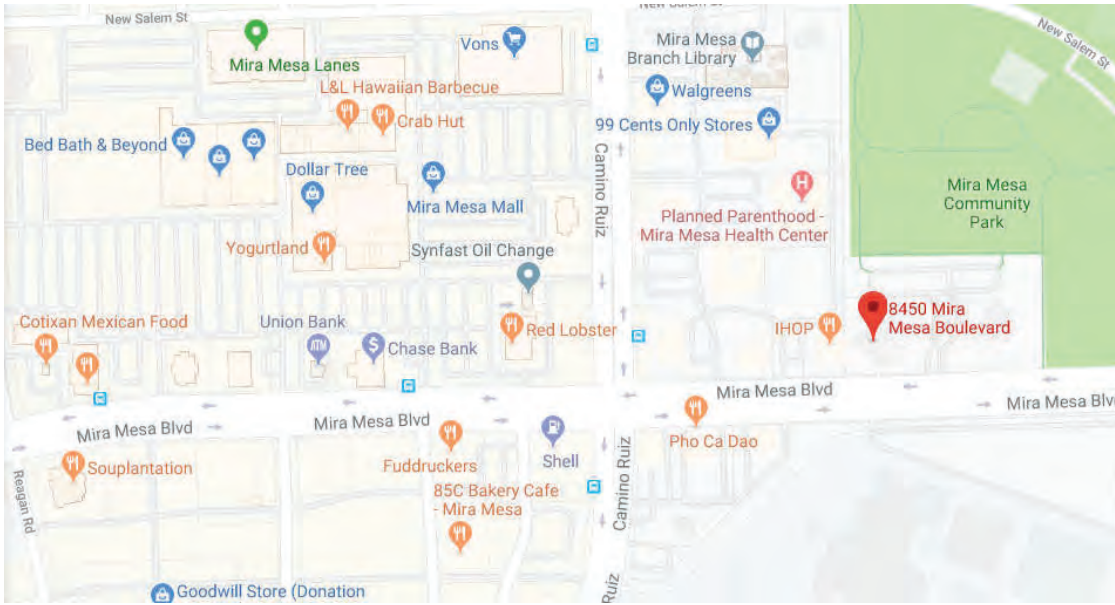

It also has great public transportation as it is right on bus route.

Recommended Transit **12**
Mira Mesa Community Plan **FIGURE**

and extremely identical to the propose Mt. Etna project has grocery store and all amenities within walking distance. even hospitals, parks, senior center, schools, target, restaurants. Places people can get help or find jobs

at.

Thank you for your consideration on things matters to my family and the kids that will be part of this community.

Thank you,
Juliet Hong

Subject: CCPG planning (apartments in Clairemont)

Dear Mr Cass,

Why this idea is NOT a good one: increased crime; increased traffic; parking problems; increased noise; decreased property taxes; children's safety and the safety of others, etc.

If you think it's a good idea to rezone and build so many apartments, then I suggest that this be done very close to your home. If those who are voting on this, imagine this being done next to their homes, they can build there.

Clairemont is a centrally-located, highly-desirable area in which to live. Don't spoil a good thing!

A Clairemont resident,

Subject: Public input for WT-4224097

Greetings,

I would like my opinion and comments to be included for the record.

Regarding the community plan for rezoning and development of additional housing in the Clairemont community, reference WT-4224097, I don't think this is a good idea. It is too little and too late for rezoning with sky scrapers and having cranes in the neighborhood. I've lived in Clairemont for decades and enjoy it just the way it is. I've seen the University City neighborhood boom and am dealing with all the traffic concerns and construction detours and road closures, and do not want to experience that in my local community. Clairemont will survive without this injection of affordable housing and rezoning.

The effort to make public all the meetings and information sharing has not been communicated very well. I would have responded sooner if mailings or door hangers would have been provided, perhaps even lawn signs with the local events or city involvement.

Most of the information has been very surprising and upsetting to the official Clairemont resident such as myself. Please don't do anything that would change our community for worse, and provide serious thought as to why these projects will improve the 92117 zip, and not just to spend money to make money.

Thank you for your consideration and attention to this matter

Subject: Mt Etna Project

Dear Mr. Cass,

I live five blocks away from the proposed site. I am happy to have the community provide affordable housing, however I have some major concerns about the size. Could you please provide for me the following information:

- 1- Why was the location zone in such a way to only allow for a certain amount of residencies in the past / only allowed to be 30 feet? What has changed in my community that that is no longer a concern?
- 2 - How will the schools be able to accommodate such a large jump in students? Many San Diego public schools are stifling and a sudden jump in student population is not going to keep Holmes school district at a high ranking.
- 3 - Other than voicing my displeasure to you about this project, what other steps can I take to ask the County and City to make the project a more reasonable size - which fits with the current zoning?

Thank you,

Kate Van Erck

Subject: No on the Mt. Etna Housing proposal

Hi, Mr. Cass,

I have lived in Clairemont, near the site of the proposed low-income housing development on Mt. Etna, for 15 years. Having seen the area grow and develop in that time, I can unequivocally state that there is no way 400+ apartments will benefit this part of Clairemont if situated in the proposed site. There is nowhere near enough space for that much additional traffic, let alone more people (foot traffic) in that area. The traffic along that section of Genesee and along Balboa is getting worse just with the new shopping areas that have been put in or refurbished in the last decade. More residents (400+ families and or individuals) will not benefit this community as much as they will burden the existing space and traffic resources. So many people in that one site will change this part of San Diego into a more crowded, unpleasant place to live.

Please take mercy on our neighborhood and reconsider the size of this project. You have great power to do great good here or great damage to people and their community.

Kind regards,
Kathleen Baxter

Subject: Clairemont Mt Etna affordable housing

Mr. Cass: Thank you for your recent scooping meeting with the Clairemont residents. You did the right thing to meet with us and to keep your comments brief and organized so that the residents had time to voice their concerns. I have been to several meetings with Clairemont residents and these meetings have been cordial and respectful. The meeting on Monday, Oct. 15, definitely was a different kind of meeting. There were many angry people there and I believe you listened to them. I did not talk during the meeting but many there expressed my concerns. Eden Yaege was your first speaker and I agree with what she said. There is a great need for affordable housing in San Diego and I am supportive of this, even in my community. It is distressing that such a huge project could advance so far and so quickly without community input. I appreciate you receiving our input now.

My biggest concern is the infrastructure; our plumbing is old. I was told the cast iron sewer and plumbing of most of the Clairemont community will not last much longer. Adding over 400 units to a small area will be a disaster for our sewer system. The project will have new plumbing but the neighborhood will suffer due to the increase demand. We can't even get our overhead lines buried and roads resurfaced so I can't believe that the city will fix our sewer system either. Getting the city to commit to upgrading the sewer system during the next few years will help address this concern. Your contractor might have other ideas to help address this concern.

As most voiced during the meeting I also have concerns for the number of residents that will occupy your 400+ units and the parking and congestion of traffic that will accompany these residents. One parking spot per unit is not sufficient. Public transportation requires excessive amounts of time so most people depend on cars and that would amount to over 800 cars if there are two adults to each unit; I am guessing there will be far greater numbers of people and cars. Each unit should have at least 2 parking spaces. Additionally, monthly transit passes should be available at a discounted price.

5 stories is not in keeping with the look and culture of the Mt. Etna neighborhood. 3 stories is more reasonable although it may still shade the neighbors too much.

I am also concerned about the chemicals used and waste that results with large projects. I hope that you can commit to recycling much of the deconstruction materials and to limit use of materials that put chemicals in the air such as carpeting, painting, etc.

Finally, I am a volunteer on the Clairemont Garden Tour committee so it makes sense that I value gardens and open spaces. You most likely will need to use every inch of the space provided but I hope that the neighbors who walk by the project will eventually see some beautiful gardens tucked into sections around the building. To construct your building right up to the sidewalk will not be a show of neighborhood spirit. Even small gardens along the perimeter of the building will be friendly.

Thank you, again, for meeting with the residents. I do hope you listen to us.

Dear Mr. Cass;

In regards to the project on Mount Etna. I have attached my own EIR concerning this project.

My first concern is that your research is faulty. I have personally found several mistakes in your research that is published.

It is also noted in the report things that are missing or overlooked in this research which concern public safety.

I wanted to get this off to you now. I am in the midst of evaluating the apartment complexes and Condo Complex on Balboa Arms Drive and their population saturation compared to what it is that you are proposing. Almost done.

There is more to come but the residents are very upset on what you are trying to do here.

Sincerely;

Kathleen Winchester

Subject: Mt Etna redevelopment

Dear Mr. Cass,

Please don't allow this project to go through. I have lived here 42 years and now I cannot even ride my bike to the Target shopping area safely. It's bad enough without adding high density housing.

5 Stories is too high-DO NOT CHANGE the current height restriction

-New high density plan will adversely affect near by schools that are already financially crippled due to repeated annual budget cuts

-Near by streets (esp. Mt Etna) are already too congested at peak hours; proposed high density will adversely affect local traffic and parking

-DO NOT CHANGE CURRENT ZONING

-Density and low income demographics are associated with higher crime rates: The plan put forth has no extra safety measures to off set the possible increase in crime levels that will be a burden to local law enforcement.

Please consider these items when you make your decisions. You probably don't live anywhere near the area.

Thanks for your time and consideration.

Sincerely,

Kathy Sebald

Subject: Input on the Mt. Etna EIR NOP

Hello Mr. Cass,

I understand that today is the last day to provide input for the Mt. Etna EIR NOP. I cannot find a place on the county-provided website re: Mt. Etna's proposed project, so my husband and I will submit our comments here.

!∇The noise and disruption created during construction will be detrimental to the current residents in this housing area, and of particular concern to those who are immediately adjacent and across the street from the proposed site. The current building on the site may have materials that could create significant health hazards, aside from an increase in dust and dirt that will be generated and may create breathing hazards for current residents who have sensitive respiratory conditions.

!∇Traffic is of great concern. The location of this project is in very close proximity to a busy street and a busy shopping center. There is already significant traffic at the Mt. Etna/Genesee intersection and having a large facility with the only entry/exit on Mt. Etna just past the intersection will create delays and gridlock while residents wait for a clear path to turn into the facility.

!∇Parking will be of great importance in a facility the size of which is proposed. There is already insufficient parking, creating a need for current residents to park not only in their driveways, but also on the street. With the estimated doubling of the number of residents in this area, parking on streets in the neighborhood will become nearly impossible, and when parents arrive to drop off or pick up their children from local schools that are in immediate proximity to the proposed site, poses increased risk to children who are attempting to enter or leave school property. Building a large facility without sufficient parking included in the building plan is foolish and irresponsible.

!∇As mentioned in the previous bullet, safety is of primary concern with a doubling of the number of residents in the area. Aside from the increased traffic that will (absolutely) occur, which will create safety concerns for children who attend the area schools, there also exists a potential safety issue for current residents of the area, which can only be determined upon review of the residents for the proposed project. Without an increase in protective resources, there is more than likely to be a negative impact on the surrounding community.

There is also the issue of how to respond to fire emergencies in a building that is five stories tall without access on all sides of the building. In particular, access on the West side of the building is inhibited by high-tension power lines, which will likely preclude reasonable emergency response in the event of a fire, particularly on an upper floor.

!∇The safety issues extend to the proximity of those high-tension wires, as well as the location of the high pressure gas line, both the property of SDG&E. In San Bruno eight years ago a pipeline exploded, killing eight people and injuring dozens of others. This was in a neighborhood with single-family homes, no high-density housing close by, and it was still a devastating event. Imagine the aftermath if such a gas line were to explode essentially underneath a project such as the one proposed.

!∇We are unclear about the proposed services that have been referred to in the scoping meetings. It seems that there are a number of reports about what, exactly, will be included in this project. There is talk of 464 units, as well as a community center, limited parking, green space, and other resources for residents that are in need of

community support. That seems to be a very ambitious agenda for such a small plot of land. The 4.09 acre lot may *seem* large, but it will quickly fill up with all the proposed options included. This does not seem reasonable and it appears that any reasonably necessary resources will be foregone in the interest of increasing unit count. This is unfair to the community and, even more so, to the potential residents of the proposed project.

!∇There is already a lack of green space in Clairemont, and imposing such a large project in a community that sorely needs open space is detrimental to the well-being of the community at large, including any proposed residents. Green space should be a priority in San Diego, where we have the great fortune of being able to enjoy the outdoors year-round. Increasing high-density housing will contribute to the heat-sink condition of an already over-concreted community.

!∇Any housing project in this area will more than likely increase the number of students who will attend area schools. There are five schools in the immediate area: John Muir Academy, Mt. Everest Academy, San Diego Charter School, High Tech High (set to open soon), and Holmes Elementary, which is the default school for this area. In addition, Marston and Kroc middle schools and Clairemont and Madison high schools, which also service this immediate community, will see an impact in student attendance.

The schools are not equipped to handle such a drastic increase in student attendance. There are insufficient classrooms and insufficient teaching staff to support such an immediate and significant increase. This will lead to fewer available resources for these schools and, as a result, a lower quality educational experience for our youth. It is important to the future of San Diego as a whole to ensure our youth have access to quality, consistent schools and resources within those schools.

!∇There is limited access into and out of the proposed site. This was mentioned in the bullet above regarding traffic, but it is a significant issue and should be addressed. To date, when it has come up, persons who are in position to address the topic have sat stoically and not offered any comment on how that will be resolved.

There is a single driveway onto a residential road, a short ½ block from a major traffic thoroughway. Potential residents of the proposed project must approach the facility either from Genesee or Mt. Everest. Approach from Genesee will result in gridlock through that intersection as residents wait for traffic to clear to turn left into the driveway. Approach from Mt. Everest will only contribute to the gridlock on Genesee as they turn right into the facility and contribute to the inability of others to turn left into the driveway. This is not only poorly thought out, but shows either a blatant disregard for the existing traffic dynamic, or a sorely inept evaluation of the suitability of the site for such a large proposal.

!∇An issue raised by current residents who are immediately adjacent to the site is a concern about the resulting lack of sunshine and privacy that the imposition of a large facility overlooking their backyards will afford. This alone will negatively impact home values in this neighborhood.

!∇Finally, but also significantly, based on all input that has been provided, the size and architecture is not in keeping with Clairemont's community character. It seems to be more aligned with locations that have fashioned themselves into destination locations for transitory lifestyles, such as UTC or Mission Valley. The current proposal seems to lean to a high-density, transitory population, in that such a significant rental facility will lend itself to a population that is not committed to the Clairemont community as it is structured.

Clairemont desires to retain and continue to cultivate a bedroom community in which middle-income families can set down roots and remain as children grow and parents become grandparents. High-population rental facilities are engendered to attract individuals who choose to move from the location when other opportunities, be it a new job or a less expensive/more desirable apartment, becomes available. Clairemont has historically been a comfortable middle-class bedroom community that seeks to attract long-term residents whose interest is to better the community they are in, rather than viewing it as a short term stop over while on the way to something else.

thank you for your consideration.

Subject: 5858 Mt Alifan Project

Mr. Cass,

I had to babysit our children and neighbor's children while my wife and the neighbor attended the project meeting the day before yesterday 10/15, so I was not able join the meeting, but my wife and the neighbor updated me on what was discussed: the scope of the project, building layout, and the concerns our neighbors in Clairemont community voiced.

I must say that I'm very disappointed and it was not fair that the project had never been communicated to me until Monday of this week 10/14, through a gentlemen from our neighbor knocking on our door with a handout detailing the project. I take this as a very serious issue raised in our community, and I'm sure I would have acted much sooner had I been informed. Although people in our community including my own family are "spreading the word" walking our neighborhood to post the handouts, there were many individuals not properly informed of the project.

I feel that the project brings only negative effects to our community, creating issues in parking and traffic. Also, as a parent of 3 small children, I am extremely concerned about the safety and morale of the community. I can never understand the intention (decision) of adding safety risk to our safe, quiet, and peaceful living environment. I believe the responsibilities of the county office/community governance group are to listen to the concerns of current residents, to maintain the existing living environment or to help build a better community, but this project is not fulfilling any of these responsibilities but rather contradicting them.

1) Please give a in-depth careful reconsideration to the project and do NOT make any residential building in our Clairemont community for people with various "issues" in such a small space. Again, this is jeopardizing safety of the existing residents of our community. Please rethink and make what's best for our community.

2) Please consider elsewhere for such a residential building and zoning. There are other areas in San Diego already made available for people with low income or the "problems" to live. And these area should first be considered as the best candidate. Creating a new residential area on top of what's already available would spread safety, traffic, and all sorts of issues, and it would be more difficult to contain the issues once they are spread all over. Considering the consequences, I would at first consider the existing area, the area that already serves for such needs or requirements.

Thank you,
Kenzo Y resident of Mt. Davis Ave.

Clairemont Mesa Community Plan Amendment and Rezone Project

Case Number WT-4224097
Notice of Preparation Public Review Period
September 10, 2018-October 19, 2018
Public Scoping Meeting Comment Sheet

Marc Cass
County of San Diego
Dept. of General Services
5560 Overland Ave
San Diego CA 92123
marc.cass@sdcounty.ca.gov

Written Comment Form:

I am unclear on why the people in charge of this project seem to be in a rush to get this project completed so quickly, and it comes at the expense of the residents in this area. Also, there is an error on page 2 of the Notice of Preparation of an Environmental Impact Report for the Clairemont Mesa Community Plan Amendment and Rezone Project it says comments are to be received "... no later than Tuesday, October 19, 2018 at 4:00 p.m." since Tuesday is October 16th, I hope this meant Friday October 19th.

On October 15, 2018, I attended the 2nd scoping meeting at Marston school in Clairemont. I am homeowner who lives approximately 6 blocks from this location. I have questions and concerns about the proposed "affordable housing" development on Mt. Etna Drive. I walk past this property every day.

At the meeting, I learned that the plan for this property was to build 454 units, and to do this the county/city would need to rezone the property from commercial to residential and to allow the developers to build 5 stories high approximately 60 feet high. I oppose the density of this complex at an already congested intersection. I also oppose the 58 foot height of the proposed buildings. This would look out of scope in our neighborhood. The project should keep with the current 30 foot standard for our area.

According to the information provided, the potential residents slated for this complex range from people with substance abuse problems, people who are or are close to being homeless including seniors, domestic violence victims and families, and people with brain injuries. While I agree these people all need housing, is putting them all in one location the best option? Has this been done at other complexes and has it been successful? Or would it be better to have half of the units for people who are currently in the workforce?

Adding 1,000 or more people to the 4 acre site would be a huge impact on our community. This could add 400-800 cars to an already busy intersection at Mt. Etna and Genesee and the surrounding area. A development like this would tax our already fragile water infrastructure. The large power lines that run right behind the proposed

development may be a health and safety hazard to the occupants of the building, along with the gas smell that has always been emitted from the Mt. Etna side of the property.

Questions:

- ! Will there be onsite security for the building?
- ! Will there be 24/7 onsite mental health services for the residents in the building?
- ! Will there be green space for residents to walk or sit in?

Suggestions:

- ! The density of this complex is too much for this already crowded intersection. Build 100 units. Include 48 units for people currently in the workforce and the rest for “affordable housing” and include 2 units for people who work in the mental health field and have skills that will make this development successful.
- ! Have on-site social services, including mental health services for the residents of the complex. Similar to what they did with the development in downtown on 6th and Cedar.
- ! According to the “Affordable Housing and Site Assessment Summary Table” it seems there are other properties on that list that could be used for the various groups of people the City/County has proposed serve at this one site. And this document recommends 118 units at this location which seems more realistic.

I would like to see this project be a success for both the tenants in the complex and the community.

Thank you,

Kim Kane

Subject: Mt Etna homeless project

Dear Mr. Cass,

I'm writing this letter to express my utter displeasure regarding the potential homeless project on Mt Etna. This is a much bigger issue than a housing project. Our state government has allowed our homeless population to double or triple in size. It's disgusting how our city and state cannot come up with a plan other than to just let the population grow and then our bankrupt city agrees to pay for their housing.

The police can't do anything as their hands are tied.

Furthermore, this housing complex is near the busiest shopping center in Clairemont, near 5 schools and there is no legitimate parking available for the new tenants. Where are they parking their vehicles!!!!? Will we have more police presence to watch over this area???

My family is completely and utterly against this housing project coming into our peaceful suburban life.

Subject: Oppose proposed zoning changes on Mt. Etna

Dear Marc Cass:

As a longtime resident of the Clairemont and Bay Park area, I strongly oppose the rezoning changes proposed for the Mt. Etna/Crime Lab location in Clairemont. The developers have built smaller low income housing projects in other neighborhoods. A similar 140 unit development would be a much better fit for this area. It would improve the quality of life of the development residents. Based on resident complaints from other apartments in the area, four hundred units will significantly increase the potential for noise complaints, traffic and parking issues, theft, mold and ventilation issues, and vermin. Exceeding the current zoning is not good for the current neighborhood or future residents.

Sincerely,
Kris Nieder

Subject: Mt. Etna Project

Dear Mr. Cass:,

I am sure you are getting tons of emails about this project, but wanted to add my thoughts. I will keep it brief.

1. I think that whatever is built it should stay within our Community guidelines i.e the 30' height limit and density requirements.
2. That location is an established community with MANY elderly living out their final years. If the project would give first consideration to the expanding elderly population that have now found themselves on the street, I would be very much in support. Targeting homeless that have put themselves on the streets due to their own decisions would be targeting the nearby population to much criminal activity. Since I work for the SDPD, I have access to Crime stats, which are actually available to most..
3. Someone has proposed a new site in Mira Mesa, on the old ball fields. I looked at that site and I really think that bit space and surrounding areas would fit the proposed project much better.

Thank you for listening.

Subject: Mt. Etna Project

Dear Mr. Cass and Mr. Cate,

I am sure you are getting overwhelmed with letters concerning the redevelopment project for the Mt. Etna Crime Lab property. Here is another. My name is Laura Cook and I live on Mt. Davis Ave. My husband and I purchased our house in 1992. This was an important decision for us because we had two young children to raise. Our house was a "fixer upper" but we knew we wanted to be in this highly desirable neighborhood. Twenty six years later we are still here. We have made dear friends, as have our now adult children. We have fabulous neighbors and we have an awesome community. Several times a year our neighbors get together for what we call a Sit. We gather in my neighbor's driveway, have a potluck and enjoy each other's company. Every couple of years we have bigger block parties. Our neighbors are our friends, our family. We watch out for and take of each other. I personally have taken care two elderly neighbors when their spouses passed. It is a safe, quiet neighborhood that is still highly desirable. Clairemont has recently been named the "Next Hot Neighborhood" by San Diego Magazine. We have many new younger home owners with young children, desiring the same thing that we did when we bought our home. Some of our younger neighbors/friends have already stated they will put their houses on the market if the Mt. Etna Proposal goes through. It's heartbreaking. Clearly this cannot be in the best interest of our neighborhood.

I understand that there is a housing issue in San Diego. I also understand that the Mt. Etna site and its surrounding area, cannot support this 400 plus unit project. The proposal to rezone that property and put in the suggested HUGE development is ridiculous. This would bring in 1,000 to 2,000 more people. The number of residents would DOUBLE. Not to mention the cars. Where will they park? Our neighborhood streets would catch the overflow. Currently our streets can't even be repaired in a timely manner or done properly. Slurry coating does not solve the problem. The additional stress on the infrastructure would be overwhelming - especially on our streets that are already in bad shape and crowded. Then there's the traffic safety issue. We already have traffic. Imagine what this would do. The amount of people that take short cuts through our neighborhood already would dramatically increase. Right now the number of cars cutting through Mt. Davis and Mt. Culebra to avoid Balboa and Genesee is high. Rarely do these cars stop at signs or move safely through our neighborhood. Our neighborhood is filled with young children playing, seniors and others walking their dogs and many residents, including myself, out to get some exercise. It can be dangerous as it is stands now.

From what I understand, this project was introduced with the promise of educating Clairemont residents with their plan. There has been very, very little to no education on the proposal. Zoning is also potentially being changed without going through the proper review process. The zoning laws were put in place for a reason. How can this happen? People are angry. Most neighbors I have talked to didn't know about the plan and feel we have been bamboozled and lied to. Rumors are flying.

I want to make this clear that this is not an attack on low income residents. This is a concern that is changing one problem into an even bigger one.

I am asking that you put the brakes on this project. By size alone it is a disaster for our community. This property is very desirable and I know the county would like to do something with it. I am sure there are many options. But there are many things that need to happen before moving forward. Traffic studies would be a good start. Communication is another. I want to see Clairemont continue to be a desirable, peaceful community with controlled growth.

Thank you your consideration.

Laura Cook

Subject: 5255 Mt. Etna Drive Proposed Project and Zoning Change

Dear Marc,

I am contacting you today as a concerned homeowner, taxpayer, and mother. I am OPPOSED to the zoning change for the 5255 Mt Etna Drive (Former Crime Lab) project.

I have lived in this community for 10 years. In the past three years there has been at least seven new young families that moved onto my street alone. We have created a tight family neighborhood that is safe for children to grow up in. I have an 8-month-old and a 2 ½ year old. Here are the reasons I am against the zoning change.

They want to put 454 units with a half a parking space per unit which is completely inadequate. With only 227 parking spots available, the only other place to park is on the nearby residential streets. This is going to create extreme congestion on our streets and an unsafe neighborhood for our children. The designated tenants of the building are going to be persons at risk with serious mental illness or substance abuse issues, HIV/AIDS infected persons, at risk youth, and survivors of domestic abuse. These people will be living 2 tenths of a mile away from our elementary school. How can I trust that my child can walk home safely living amongst this type of population? How is it ok to let this developer put this population here when the city won't allow for a cannabis dispensary or a sex offender in this close of proximity to a school.

We live in a middle-class neighborhood and work very hard for what we have. This would create extreme overcrowding in this area. They zone residential neighborhoods for a reason and it is not okay to let the city or county just come and change that.

Apparently, the county considers this area a transportation hub. They couldn't be more wrong. An analysis was done earlier this year that determined the transit in this area was fair/poor.

There are other options for this building that would benefit the community. How about a memory care or Housing for senior citizen? There's shopping and a medical facility nearby specifically for that population. This would also create less traffic and parking issues and it would not put a significant risk to our neighborhood. There DO NOT need to be so many units in this development. It is not good for the community. Please hear our concerns and do not change the zoning from discretionary to ministerial. Thank you for your time.

Subject: AGAINST Mt. Etna Development

Hello Mr. Marc Cass,

As a resident in the Mount Streets area of Clairemont and having two young girls attending Mt. Everest Academy, I **strongly object** to the Mt. Etna Rezoning and Proposed Development.

My reasons for this objection are many and they include:

1. Mt. Everest Academy is an open campus, and placing a high concentration of developmentally disabled people as well as people with brain injuries might result in a **catastrophe at this school** or near the school where students walk, bike, and eat lunch. I vote for NO ADULTS WITH DEVELOPMENTAL DISABILITIES or BRAIN DAMAGE so close to a K-12 school. I also vote for NO ADULTS WITH CRIMINAL RECORDS so close to a K-12 school. These people need to be in an institution that will take care of them.
2. The proposed height and number of units will burden the area visually, with traffic, and with crime. I vote for NO CHANGE IN ZONING!
3. My property value and quality of life will be reduced.

Proposal from me:

Build a nice library at the site that everyone will enjoy. Clairemont doesn't have a nice library.

I hope you take my input seriously.

Liljana Hristova
(concerned resident and homeowner of Clairemont)

OBJECTIONS TO AFFORDABLE HOUSING
PROJECT IN CLAIREMONT
CRIME LAB SITE

OBJECTIONS

1. Object to changing the process from residential to ministerial so that the residents of the community, including the Clairemont Town Council and the Clairemont Community Planning Group are cut out of the planning process. I am against a Community Plan Amendment that would increase the height and density and allow for a multifamily residence on that site.

2. Object to the incredibly swift way all of this was done without any input from the community until the very last minute.

3. Object to having “at least 50% of the units” dedicated to persons with serious mental illness, substance abuse problems, homeless, domestic abuse survivors (statistics show the latter return to their abusive partners at a high rate which would be a safety issue for all); although it is indicated there will be some housing for veterans and seniors. At this rate, it has the potential to be another Chicago Cabrini Green situation, which, as you know, had to be destroyed due to all of the crime and drug issues and the tenants not taking care of their units.

ISSUES

1. Traffic: The traffic on Balboa and Genesee is almost gridlocked at the present time during the early to mid mornings, lunchtime, late afternoon and in the evening between 5 PM to 7 PM. The entrance to and from your proposed project will force traffic onto the residential side streets causing a backup up on these narrow residential streets as cars try to make their way onto Genesee or Balboa. You also have Mt. Everest Academy traffic with parents dropping and picking up the students as well as faculty coming and going. A little further down Genesee will be a large amount of traffic connected with the opening of the new Charter School on Mt. Alfian with a large number of students being dropped off and picked up including a large number of faculty

arriving and leaving. You are setting up extremely Dangerous traffic conditions.

2. High Density.

a. When the hospital was there, it was deemed that places for 130 persons was the maximum. You are going way beyond that with a proposed 454 units which has the potential to increase the residential capacity anywhere from 900 to 1,400 persons in this small fairly compact area is scandalous. You are simply warehousing people.

b. There is no planning for increased school attendees. The neighborhood elementary school is filled beyond capacity at the present time.

c. There is insufficient planning for parking spaces; ½ space per unit. In this day and age, even those in affordable housing have cars (just look at the large number of parked cars/traffic on Mt. Alifan by the Stratton BEFORE the 54 new affordable housing apartments are added).

d. There is no planning for any park or green space as part of this project. The residents aren't going to stay inside their units, they will be "hanging out" in the surrounding residential areas.

e. There is no planning to build a new library; Balboa is outdated and small.

f. There is no planning for the increase of water pressure in an area that is already experiencing low water pressure at times. Last year, many of us in surrounding neighborhoods had to upgrade our water pressure gauges. Accordingly, there is no plan to handle increase in sewage usage.

g. There are SDG&E power lines directly overhead the area being considered which is unsafe.

3. Insufficient Public Transportation: The area where the Crime Lab is situated is only listed as fair for public transit usage. Even if you wanted to add more buses, the traffic is too impacted to even do so.

4. Clairemont Doing Their Fair Share: In the immediate area on Mt. Alifan is the Stratton that has 312 units and a multitude of crime and

safety problems. Across the street on Mt. Alifan will be the new 54 unit low-income apartments. In addition, we have Sorrento Towers on Cowley Road, which is a low-income apartment complex of 198 units for low-income seniors and those with disabilities. So, within an approximate 4.5 mile radius there are already 564 low income housing units. What statistics do you have to show that Bay Park, Bay Ho, UTC, La Jolla, are doing their part to house these populations at the same level as is currently the case in Clairemont.

a. In the Morena Corridor Area where a large number of residences are to be built; there will not even be 10% designated for low income.

b. In the area near Overland, near your own county offices, there have been approximately 800 units built in the past couple of years and there were not any designated for low income.

c. In UTC directly adjacent to the huge transit terminal that would be ideal for public transportation usage, there are no units designated for low income.

d. In the Midway district, at the site of the old post office which is county property, that property is being developed so as to Revitalize the neighborhood; no proposals to build any low income housing, even though this area is designated good to excellent for transportation and is near welfare facilities and shopping.

MITIGATIONS

Traffic: There is no way to mitigate this unless you start tearing down some of the businesses and residences on Balboa and Genesee to widen the roads. That would be total decimation of a community.

Transportation: There is no way to mitigate this because no more buses could be added as there is just no more room for increased bus traffic on the roads unless you tore down businesses and residences to widen both Genesee Road and Balboa Avenue.

Schools: You would need to find property to build a new elementary school.

Library: You would need to build a new library on the existing space where the Balboa Library branch is located.

PROJECT ALTERNATIVE LOCATION

The ideal alternative would be where the old Post Office property is located. It is excellent for transportation, near welfare services and near a myriad of shopping facilities.

CRIME LAB ALTERNATIVE PROJECT

An upscale mixed use facility to continue revitalizing the Clairemont Community. This revitalization began with the upgrading of the Kohls shopping center. We need a facility that maintains the number of cars that were used by those who worked at the Crime Lab so the traffic does not become any worse. We also need a facility that does NOT require ANY REZONING to the area and does not change the current community plan.

Subject: Highrise @ Mt Edna & Genesee

Mr. Cass,

As a close neighbor to the subject proposal, it was a very recent surprise to learn about all of this out of nowhere. Was that intentional? Placing that many people in that small of a area is absolutely ridiculous. Parking and congestion are never addressed and certainly how the current community feels is not a concern of the builders or the city. They don't care!

Is this another case that the law doesn't apply to builders but does to community neighbors?? We have to adhere to a height restriction but new projects can change anything they want anytime they want?!

Safety is a very important issue that is currently not a problem. Bringing that many people into a tall structure cannot eliminate safety concerns and that is very worrisome. There are children and many, many seniors that have lived and raised their children here. Again, that's a risk that the builders and the city obviously aren't concern about. This neighborhood and Clairemont are doing well just as is. Why mess with a great thing?

As a current homeowner, this project , in fact needs to be stopped. This is not the location for such an undertaking in an already crowded location!

Subject: Mt. Etna Project

Please don't file this email under NIMBY-Alert.

That is not the case. We care about our community and DO want to see good projects, but Mt. Etna is NOT one of those.

It violates the Community Plan and Zoning for the site. It exceeds density being too big, not commercial and is proposed to exceed the 30' height limit.

Aside from the fact that Clairemont already supports more of these housing projects than most other communities.

Mira Mesa has a wonderful site on the old ball fields that fit the requirement of size, zoning, community access. Please hear the community, we are growing stronger each day.

Subject: Mt. Etna Housing Project

Hello Marc,

My husband, I and our two children are residents of Clairemont--very nearby the proposed Mt. Etna low income housing project. My husband Doug is a local small business owner and I have been a very active parent at our daughter's schools, Holmes & Marston Middle, for 9 years.

We have worked very hard, spent countless hours, and donated thousands of dollars to make Clairemont a great community. Together, with thousands of others, we have contributed to make this a thriving place to of business and a wonderful place to raise children or retire.

The Clairemont community has finally started to see a return on our investment: families are staying in the Clairemont school cluster, property values are increasing, and more quality retailers are moving into our community or making improvements to local shopping centers.

I know (personally) that I speak for hundreds of families when I say **this project is a threat everything we have worked for for decades.**

There is no secret as to why we say this. We all know the reality of a high volume housing project like this: higher crime rates, more drug use, increased mental illness, more traffic, over crowded classrooms, higher school delinquency rates, and so on. Overall, **this development places more stress on our community, which is already bearing the financial burdens of the middle class, including increasing taxes of all kinds, a lack of Title I funding at our schools, and thousands of low income housing units.**

ÄÄ!"#\$%&!(\$Ä!"#\$%&'()*#(Ä# +, (-*(. / (Ä%(!&1%\$#(-%2*!&3(4 ""\$#&' *)\$*+& ,-\$./ !#0\$12&\$./!#0\$4 5&6&5\$78 #\$/ !#0\$9 \$: # \$; 2< = 0\$Ä- \$7%! !=,0\$; > 3&? \$./! #0\$=% 2\$; \$./! 0\$:-%\$4@-<2=\$./!#0\$4 %A\$B-,# --\$. / !#0\$:% 8 22\$./!#0\$C#\$D&#! 0; %52 \$7E0\$R38% \$+-\$D&22#ÄC@)\$A\$-/\$ '=&,' IJ\$K - \$%- \$=&,\$=@%\$%R,\$Ä#!&,' \$2=\$&,5=L-\$ L&2&-#0\$R=-%0\$,8\$L-,! 22>\$8&# <2)

Furthermore, I understand there are *no improvements to infrastructure, schools, roads*, etc., and that the Clairemont Community Planning Group will be ousted from partaking in submitting project feedback. How can this be?

As the daughter of a residential and commercial real estate developer, I am familiar with some of the processes of housing and development. I am well aware that this project is likely a displacement for low income housing from another community--a high end development or community in La Jolla or the like that is being passed down to we middle class residents of Clairemont. NOT FAIR!

I know this project can go to any other number of places without requiring such heavy rezoning, building code changes, or ***negative residential/community impacts and blatant disregard for voters' desires.***

We are a tight knit community and we will fight to keep the Clairemont we have built.

Thank you for your time.
Lisa & Doug Johnson

Subject: Mt. Etna low income apt

Hello,

I'm writing this as a concerned resident on the Mt. streets in Clairemont.

Please consider this low income housing project in Clairemont to be too overwhelmingly big for his area.

This is not the right site for a project like this because of traffic increases to an already busy traffic area, our property values being jeopardized, crime increase in a neighborhood with schools and young children so close by, and no supervision for the persons being considered to live in this project.

I am opposed to this project.

Sincerely,

Lisa Early

Subject: Public Comment for: Clmt Mesa Community Plan Amendment & Rezone Project: Case No.: WT4224097

Marc Cass, County of San Diego, Department of General Services
Chris Cate, District 6 City Council Member, San Diego City Council
Naveen Waney, Chair, Clairemont Community Planning Group

Hello all,

My name is Loraine Chapin. I live at 4252 Mt. Foster Avenue. I have lived here for 30 years. I raised my two children in this quiet, wonderful and family oriented neighborhood. They attended Holmes Elementary, Marston Middle School and Clairemont High School. I know my neighbors. We are a close knit community. We look out for each other, our homes, our children, our seniors and our beloved Tecolote Canyon. We have annual block parties and spontaneous driveway BBQ's. It is the perfect neighborhood to raise a family. It is quiet, safe and close to good schools, shopping and houses of worship. I walk my neighborhood regularly at all times of the day. I have walked as late as midnight and as early as 7 AM. I have never felt unsafe. It is my home. I am pleased to see many new families moving into the neighborhood with children or with dreams of having children and raising them here. Unfortunately, the tranquility, peacefulness and safety of our neighborhood is at risk.

On Monday night, October 15, 2018, I attended a "public scoping meeting" at Marston Middle School for the above referenced item to rezone the ~ 4 acre parcel where the Sheriff's Crime Lab now sits. It was formerly (before I moved to the neighborhood 30 years ago) the Clairemont Hospital. Now there is a proposal to amend our community plan to permit a development, the size and scope of which are totally out of character and unnecessary for our neighborhood community. T

I send these comments and observations to voice my **OPPOSITION** to the amendment of our Clairemont Community Plan (CPA) to allow the construction of a 5 story building containing 450 units. Specifically, I was informed that the request to amend the CPA was initiated by the County of San Diego. In fact, the County sent a RFP to developers with the proviso to "assume" the requested zoning had been achieved. As such I heard from Chelsea representatives, the developers who were selected pursuant to this RFP, a description of the superstructure proposed for the site. Quite frankly I find this appalling. The RFP process is expensive and laborious. To include any statement about zoning changes NOT YET made in the description of the project to be bid upon is not only an audacious act but a waste of taxpayer funds.

I am also very concerned that I am now required to provide comment by tomorrow (October 19, 2018) for a project I just learned about. I don't know how the County has been noticing this significant impact to the character of our neighborhood. I learned about it from a neighbor who heard something from another neighbor. At the meeting I was given a summary of activity to date written by Karen, a community member I have not yet met. That will change. The existence of this project as well as its size and scope are now spreading like wildfire and all of my neighbors are just as angry, confused and surprised as me. I encourage you to put the brakes on this project. A project of this size, scope and magnitude warrants more community input. Plus, it is difficult to

provide “meaningful” comments to a project which was presented to the community on Monday night, three days ago.

That said, here are my comments:

1. The project is too big for our neighborhood. We are a community of 300 single family residences. This project would add 450 more units. This more than doubles our density. Our infrastructure can't handle this. Our streets can't handle this. We are already a pass through for motorists heading east on Balboa to avoid the light at Balboa & Genesee. They make a left on Mt. Culebra and then make a right on Mt. Davis and then another left on Mt. Etna to Mt. Herbert where they make a right to get to Genesee. It is often a steady stream.
2. There is only one entrance/exit to this property on Mt. Etna very close to Genesee and across from the main entrance/exit to the shopping plaza housing Little Caesars, restaurants and Sharp Senior Care. This poses a serious safety concern should there be any emergency.
3. Mt. Etna is already congested at this area. Traffic is often backed up at the light at Genesee and Etna.
4. Down the street on Mt Etna is the John Muir Academy. Formerly, Anderson Elementary, this school is currently increasing its enrollment bringing more traffic to the neighborhood.
5. Horizon located on Genesee is now the site for High Tech High. The freshman class is moving in this year. Over the next 4 years the other grades will be moving in. This is additional stress on our traffic.
6. A 5 story super structure is totally out of character for our community. We do have the one building on Balboa and it is an eyesore. I don't think it is filled.
7. Of the ~ 450 units proposed in this project “50% would be set aside for seniors, persons with disabilities, persons with serious mental illness or substance abuse problems, persons with HIV/Aids, military personnel and veterans, at risk youth, survivors of domestic violence, persons who are homeless or at risk of homelessness, transition age youth, and families in need.” These are important groups. Our community needs more time to assimilate just what the County is proposing for this very small site.
8. The development is more units per acre than any previous development of Chelsea according to their presentation on Monday night.
9. The public transportation in this area is dreadful. It always has been. Bus rides can take hours with numerous changes. This is certainly not conducive to seniors who no longer drive.
10. While at the meeting on Monday night, neither the County officials nor Chelsea Representatives provided answers to the numerous and valid questions posed by the claremont Community members in attendance.
11. I don't know who is driving this train but it looks as if it has left the station without a conductor. I encourage reasonable minds to put the brakes on this project. There were several other sites suggested which offer better public transportation, ingress & egress and a greater compatibility for this project.

Be assured, I plan to attend all future meetings concerning this project. I realize the county would like to do something with this project. This, however, is not the appropriate solution. As a thought, what about a park or open space? This would be far more desirable .

Thank you Chris Cate for attending the meeting. It seemed you were concerned about the scope, noticing and rush of this project. I know your position as a Council Member precludes you from support one way or another.

I have seen you, however, to be a big believer of “getting the issue out in the open for discussion.” I would encourage you to do what you can to bring to the light of day “everything” that is going on with respect to this project and any attempt to rezone or amend our community plan to allow this.

Thank you for your consideration.

Subject: Fwd: Mt. Etna Affordable: EIR Comment

Hi Mr. Cass,

Thank you again for taking these comments into consideration for the scope of the EIR.

As mentioned in my previous email (excuse all of my misspelling errors) , the traffic in the Genesee Ave. Mt. Etna Dr. area are already very congested and so I'd like to provide more detail and more comments regarding the scope of the EIR.

During weekday hours starting around 4 p.m. traffic headed south on Genesee Ave. will become backed up past Mt. Etna Dr. The light at Mt. Etna will still be green, allowing cars to try and squeeze in to the southbound lanes between Balboa Ave. & Mt. Etna Dr. Once the light at Mt. Etna Dr. turns red there will almost always be cars in the middle of the intersection blocking it. This prevents the the cars with a green arrow, headed north on Genesee Ave., turning left onto Mt. Etna. to make that left hand turn.(See screen shot below). This along with what I mention in my previous email is the current situation, whether right or wrong, and having only one entrance off of Mt. Etna will in my opinion be a traffic disaster for all, and must be mitigated if possible!

Other concerns for the EIR are as follows:

- 1) During construction, will Mt. Etna Dr. be shut down to local traffic?
- 2) Has light pollution from the units facing the neighborhood, or the site itself been considered?
- 3) Will the public transportation system be upgraded to include lighting for night, more comfortable stops, safer stops, more attractive or distinct stop enclosures?
- 4) Is there reliable senior/special needs public transportation in the area, since hopefully many of the residents will be senior or those with special needs?
- 5) Will the public transportation be expanded to include more stops that apply to the potential residents, since many may not be within walking distance?
- 6) There may need to be a cutout for the bus on the west side of Genesee Ave. in front of the proposed housing so that the it does not impede high traffic flow on Genesee Ave and/or cause any safety concerns especially for the new residents which include seniors who may move much more slowly than a healthy adult, special needs residents, and small children that may now be in the area.

Thanks again Mr. Cass and feel free to call me for any follow up if you need.

Subject: Mt. Etna Affordable: EIR Comment

To: <marc.cass@sdcounty.ca.gov>

Hi Mr. Cass,

Thank you for taking these comments into consideration for the scope of the EIR.

The existing traffic conditions for the areas/intersections of Mt. Everest Blvd. & Balboa Ave. and of Genessee Ave. & Mt. Etna Dr. are very congested due to traffic from the residents in the area, but just as much from visitors using Mt. Everest/Mt. Etna as a shortcut between Balboa Ave. and Genessee Ave.

There are business and offices near Mt. Etna and Genessee that contribute to the neighborhood streets being so well traveled, however, I believe that directing traffic from new residents, visitors, employees, nurses, etc. toward the main roads will cut down on the number of fast drivers through the neighborhood. There is also an issue with the traffic light there at that Mt. Etna/Genessee Ave. intersection.

Traffic coming from the Home Depot Plaza do not have a green left turn signal to make a left (south) onto Genessee. That causes accidents that I witness nearly every morning due to "right of way" drivers (mostly turning right onto Genessee) almost being side swiped by drivers who do not yield when making their left. It also has a tendency to cause a backup on Mt. Etna heading east to Genessee, due to ignorant and/or cautious drivers stopping to allow the vehicles to turn left from the Plaza. Perhaps the cautious ones don't want to run the risk of

being hit? I've also seen the drivers from the Plaza or even from Mt. Etna almost hit or come way too close to pedestrians, many times, due to the frantic nature of that intersection and drivers doing whatever it takes to catch the green light and make their turn.

I propose 2 things:

1) Add a left arrow green light for those leaving the Plaza which will help current and future traffic flow. (See Exhibit 2)

2) Build a curved driveway exiting the Affordable Housing site onto Mt. Etna that only allows for right turns headed toward Genessee, and not into the neighborhood preventing a heavily traveled thoroughfare. Also, to help assure the flow toward Genessee Ave. from the Affordable Housing site, I would propose building a short curb in the middle of Mt. Etna so that any drivers that would disregard the curb on the Affordable Housing Site would be hesitant to then need to jump over a curb on Mt. Etna. (See Exhibit 3)

Exhibit 1 is a screen shot of Clairemont honing in on the affordable housing site and the intersections in question.

Exhibit 2 is another screen shot showing the first issue and the proposed solution again would be adding the left turn arrow to the existing light.

Exhibit 3 is the final screen shot showing the second proposed solution of the curbs that direct traffic toward Genessee Ave.

Exhibit 1:

Exhibit 2:

Exhibit 3:

Please feel free to contact me with any follow up questions, and thank you again!

They attended Holmes Elementary, Marston Middle School and Clairemont High School. I know my neighbors. We are a close knit community. We look out for each other, our homes, our children, our seniors and our beloved Tecolote Canyon. We have annual block parties and spontaneous driveway BBQ's. It is the perfect neighborhood to raise a family. It is quiet, safe and close to good schools, shopping and houses of worship. I walk my neighborhood regularly at all times of the day. I have walked as late as midnight and as early as 7 AM. I have never felt unsafe. It is my home. I am pleased to see many new families moving into the neighborhood with children or with dreams of having children and raising them here. Unfortunately, the tranquility, peacefulness and safety of our neighborhood is at risk.

On Monday night, October 15, 2018, I attended a "public scoping meeting" at Marston Middle School for the above referenced item to rezone the ~ 4 acre parcel where the Sheriff's Crime Lab now sits. It was formerly (before I moved to the neighborhood 30 years ago) the Clairemont Hospital. Now there is a proposal to amend our community plan to permit a development, the size and scope of which are totally out of character and unnecessary for our neighborhood community. T

I send these comments and observations to voice my **OPPOSITION** to the amendment of our Clairemont Community Plan (CPA) to allow the construction of a 5 story building containing 450 units. Specifically, I was informed that the request to amend the CPA was initiated by the County of San Diego. In fact, the County sent a RFP to developers with the proviso to "assume" the requested zoning had been achieved.

As such I heard from Chelsea representatives, the developers who were selected pursuant to this RFP, a description of the superstructure proposed for the site. Quite frankly I find this appalling. The RFP process is expensive and laborious. To include any statement about zoning changes NOT YET made in the description of the project to be bid upon is not only an audacious act but a waste of taxpayer funds.

I am also very concerned that I am now required to provide comment by tomorrow (October 19, 2018) for a project I just learned about. I don't know how the County has been noticing this significant impact to the character of our neighborhood. I learned about it from a neighbor who heard something from another neighbor. At the meeting I was given a summary of activity to date written by Karen, a community member I have not yet met. That will change. The existence of this project as well as its size and scope are now spreading like wildfire and all of my neighbors are just as angry, confused and surprised as me. I encourage you to put the brakes on this project. A project of this size, scope and magnitude warrants more community input. Plus, it is difficult to provide "meaningful" comments to a project which was presented to the community on Monday night, three days ago.

That said, here are my comments:

1. The project is too big for our neighborhood. We are a community of 300 single family residences. This project would add 450 more units. This more than doubles our density. Our infrastructure can't handle this. Our streets can't handle this. We are already a pass through for motorists heading east on Balboa to avoid the light at Balboa & Genesee. They make a left on Mt. Culebra and then make a right on Mt. Davis and then another left on Mt. Etna to Mt. Herbert where they make a right to get to Genesee. It is often a steady stream.
2. There is only one entrance/exit to this property on Mt. Etna very close to Genesee and across from the main entrance/exit to the shopping plaza housing Little Caesars, restaurants and Sharp Senior Care. This poses a serious safety concern should there be any emergency.
3. Mt. Etna is already congested at this area. Traffic is often backed up at the light at Genesee and Etna.
4. Down the street on Mt Etna is the John Muir Academy. Formerly, Anderson Elementary, this school is currently increasing its enrollment bringing more traffic to the neighborhood.
5. Horizon located on Genesee is now the site for High Tech High. The freshman class is moving in this year. Over the next 4 years the other grades will be moving in. This is additional stress on our traffic.
6. A 5 story super structure is totally out of character for our community. We do have the one building on Balboa and it is an eyesore. I don't think it is filled.
7. Of the ~ 450 units proposed in this project "50% would be set aside for seniors, persons with disabilities, persons with serious mental illness or substance abuse problems, persons with HIV/Aids, military personnel and veterans, at risk youth, survivors of domestic violence, persons who are homeless or at risk of homelessness, transition age youth, and families in need." These are important groups. Our community needs more time to assimilate just what the County is proposing for this very small site.
8. The development is more units per acre than any previous development of Chelsea according to their presentation on Monday night.
9. The public transportation in this area is dreadful. It always has been. Bus rides can take hours with numerous changes. This is certainly not conducive to seniors who no longer drive.

10. While at the meeting on Monday night, neither the County officials nor Chelsea Representatives provided answers to the numerous and valid questions posed by the claremont Community members in attendance.

11. I don't know who is driving this train but it looks as if it has left the station without a conductor. I encourage reasonable minds to put the brakes on this project. There were several other sites suggested which offer better public transportation, ingress & egress and a greater compatibility for this project.

Be assured, I plan to attend all future meetings concerning this project. I realize the county would like to do something with this project. This, however, is not the appropriate solution. As a thought, what about a park or open space? This would be far more desirable .

Thank you Chris Cate for attending the meeting. It seemed you were concerned about the scope, noticing and rush of this project. I know your position as a Council Member precludes you from support one way or another. I have seen you, however, to be a big believer of "getting the issue out in the open for discussion." I would encourage you to do what you can to bring to the light of day "everything" that is going on with respect to this project and any attempt to rezone or amend our community plan to allow this.

Thank you for your consideration.

To: <matc.cass@sdcountry.ca.gov>

Hi, Marc!

I'm writing to you to ask you to please reconsider the location of the Mount Etna low income apartment complex.

My family has lived in this neighborhood for seven years now. We chose this neighborhood because of the safety, sense of community, and most importantly for the neighborhood schools!

I'm disheartened that more community input wasn't sought out during this planning.

We are concerned about safety, crime and traffic issues with this location in addition to not following city regulations in regards to height limits.

Mt Etna is a very small street that already gets congested with the current neighborhood population. The street cannot support more traffic or street parking.

It is also the main street to the only community park. Many children walk or ride their bikes to this park and I worry about their safety with increased traffic and their safety with increased crime.

Most importantly, we love our neighborhood school, Holmes Elementary! This year admittance was to capacity and no 'Choice' applications were excepted. Every student at that school is from the neighborhood. They have already been discussing changing boundary lines for the school because of the amount of children that are in this area. Adding an apartment complex of that size would dramatically impact our children's classroom sizes!! And possibly drastically change the boundary lines for our neighborhood schools, causing us to lose the very reason for choosing a home in this neighborhood!

We have a great neighborhood with wonderful neighbors and schools! The community has grown and changed to include many young families with young children. We all work hard to keep it a safe place for our children. We will fight to keep it this way and we hope that you consider our concerns and will fight with us to keep it the wonderful neighborhood that it is.

Sincerely,
Lorina and Clint Bennett
4865 Mount Durban Drive

Subject: Clairemont Mesa Community Plan Amendment and Rezone Project (WT-4224097)''

Hello Marc I am a 30 year Clairemont resident and have never gone to one of your meetings. I am hoping to come on Monday to understand the project more.I have a couple of questions/comments.

I do understand the need for lower income housing in San Diego and feel we need to provide more housing for that clientele.

I feel that in Clairemont we already have a many low income housing .

How does our community compare to say PB, University City, La Jolla, Tierrasanta in how many affordable housing units they have compared to us. (I am just choosing communities close to ours)

Second is it a done deal that this site will be for housing? No other options?

Is Affordable housing for seniors always clumped in with general affordable housing or can the property be zoned for just low income seniors?

Have other options been discussed?

Ideas: New and LARGER DMV

New Clairemont Library (the Balboa branch has a design already in place)

What other needs does the city have for land?

I hope but do not expect to get a response by email but look forward to understanding more.

Also I do not completely understand what an EIR report covers and it might well be more about water and electricity than about a residents concerns.

Thank you

Lynn Sampson

Subject: Mt Etna Low Income Housing Project

Mr. Cass –

I am writing, like many others, to express my opposition to the proposed Low Income housing project being planned for the former San Diego Crime Lab site at Mt. Etna and Genesee. I am a resident of Clairemont West (I live on Mt. Culebra) and have seen by personal observation that this housing development is not the right fit for our community, for the following reasons:

1. Traffic – This area of Clairemont is already overburdened with traffic, especially during rush hour in the mornings and afternoons. I often have to wait through more than one cycles of stoplights at the Balboa/Genesee intersection and this housing project will add more cars to an area that is already over-capacity for traffic.
2. Parking – Similar to the traffic concern, parking is already at a premium in this area. Many streets and local business don't have enough parking as it is, and 400+ additional residents in high-density housing will only make the problem worse.
3. Crime – Crime has become an increasing problem in this area with several residents reporting car break-ins and property theft in recent months. The intent of this housing project is house low and extremely low-income residents; statistically a large percentage of crimes are committed by low-income individuals. It stands to reason that the inject of 400+ low-income residents to this area will have a negative impact on crime.
4. Schools/Children's Safety – Similar to the concern with crime, myself and several other Clairemont residents have small children that routinely play outside. We are already experiencing times where we have to quarantine the kids inside due to helicopters circling looking for at-large criminals; these occurrences are likely to increase with the addition of 400+ low-income residents to the area.
5. Property values – I can appreciate the need for low-income housing and the opportunity for everyone to establish a residence; however, West Clairemont is not the place to do so. Clairemont West is a relatively low-density, family neighborhood primarily comprised of single-family homes. The addition of a massive, high-density housing unit will negatively affect the value of mine and other residents' homes. We bought these homes partially as investments and for San Diego County to devalue them by changing zoning restrictions is simply unacceptable.

I appreciate your taking the time to read and understand my concerns and sincerely hope that this project be reconsidered.

v/r

Subject: Mount Etna housing

Hi, my name is Makalani Hudgens. I moved into Clairemont when I was 3 years old to attend Lafayette elementary school since they had the deaf and hard of hearing program there. I've grown up in Clairemont until I was about 21, I moved out of Clairemont/San Diego with my son. I couldn't find any apartment in Clairemont that will approve me with my low income, I was just a SSI issuer. Now as of I am reading the news about the housing for Mt Etna. I am thrilled about that because I would love to move back in Clairemont where I grew up. I have a 6 years old deaf daughter now and my 16 years old son is living in Clairemont with his aunt right now and is attending James A Madison High School as a junior in the music band. I would love for my daughter to be grown up in Clairemont and attend Lafayette, CPMA and Madison. I will support the idea of housing the units to Low Income Families, Foster Youth housing transitional (18-21, maybe 24) but I don't like the idea of homeless and sober living being in Clairemont with this housing project. Please do let me know if you would like me to come out and voice my concerns too. Thank you.

Sincerely,
Makalani Hudgens

Subject: Clairemont Mesa Mt. Etna Project Opposition - 2nd Scoping Meeting

I am opposed to the zoning change for the 5255 Mt Etna Drive (Former Crime Lab) project.

Why is the zoning trying to be changed from DISCRETIONARY to MINISTERIAL? This will give the community no input or recommendations. The height, and other issues could be changed at the developers whim and the community could be stuck with a multitude of problems associated with the tenants (that the city is not willing to deal with regarding appropriate 24 hour care facilities for mentally challenged and/or drug addicts), parking, traffic, and infrastructure.

Is not the city owned land and buildings for the citizens of San Diego and to benefit the communities in which they are located? We the citizens want quality of life to be enhanced by new housing and construction. Not a developer out to profit at the expense of the residents or for the easy way out for politicians. The developers and politicians don't live in this community and therefore, it doesn't impact their lives, only their bottom line and/or reputation. Don't let the problems of insufficient housing prompt hasty action by the mayor, city counsel, etc. The city ordinance requires developers of multifamily buildings to set aside 10% of the units, not 50% to 100% for low income/affordable units.

What is the definition of low income and affordable units? Low income is usually Section 8 housing, a no accountability program. Affordable units – is there an accountability?

The fact that low income (Section 8), the mentally unstable, and drug addicts, all without accountability, are being added to the list of allowable occupants is the catalyst for my opposition on this project and that it is trying to be approved through the back door (ministerial). Other factors include but are not limited to the number of units, lack of reasonable parking, added traffic to an already existing problem, and undue pressure on the infrastructure that has not been upgraded. I could elaborate on some of the challenges with the standard EIR topics (e.g., parking, traffic, safety, appearance, utilities, etc.), which will likely be covered by others, but instead will focus on the heartbeat of our community, the people that live here.

Clairemont is a supportive community; we have grown over the years and made Clairemont a better place to live, have a business and work. It is the people of this community that have created and changed Clairemont; not some developer or politician.

For the upcoming EIR report I would like to see the following addressed:

1. Definition of low income and affordable housing by price, square footage, and number of occupants.
2. How many of these type units already exist in Clairemont?
3. How do the statistics for low income and/or affordable housing include multiple incomes that are required to pay the rent? (e.g., Clairemont has a lot of duplexes that house a large number of people for the space, have limited to no parking and require multiple incomes.....how are these classified?)
4. How do the number or percentage of low income and affordable housing units in Clairemont compare to other portions of San Diego?

5. Which zip codes in Clairemont are considered low income or qualify for medical/dental graduates to work with a relief from their student loans because it is a “low income” zip code?
 6. If affordable housing is the real goal, why are units being built for standard rent? (Not really an EIR topic but could be addressed).
 7. Compare the number of low income/affordable housing units proposed in this project to other development projects of similar size?
 8. Address how putting low income (Section 8 and the like), mentally challenged, and drug addicts, all without accountability, in a housing development help them with their real issues.
 9. Like #7, address how putting low income (Section 8 and the like), mentally challenged, and drug addicts, all without accountability, in a housing development helps Clairemont.
 10. Provide general residential distances and directions (not addresses) to political supporters and developers of this project AND similar projects in their respective neighborhoods.

There are other acceptable alternatives to address the issue of lack of affordable housing at this location without impacting the current residents. For example, a **MEMORY CARE** or **HOUSING FOR SENIOR CITIZENS. VETERANS** without mental or other issues that put them in “at risk” category.

Build at 45 units per acre, approximately 160-170 units, as zoned and put aside 10% for affordable housing. This would be in keeping with city’s plan for new development.

The mentally challenged and drug addicts need to be assisted at qualified facilities; Clairemont residents are not qualified to deal with people that have these characteristics and should not be put at risk to meet some quota of housing.

Subject: Clairemont Mystery Project

So the deadline for comment is the 19th of this month, yet this is the first any of us are hearing about this FAR too large and WAY too high project? What the heck? Who owns this ramrod and why has the City of San Diego allowed it to be shoved down our throats by surprise? I have no objections to low income housing, but this concentration is absurd and can only overload the existing infrastructure to a degree that will ruin the living standard of local residents and new residents alike. Why is it being allowed to exceed the height limit everyone else has to abide by? Why such density? My neighbors and I will have to object, and I would like to be informed of any venue of public input. This stealth project should not go forward without proper environmental and neighborhood impact studies, which I believe will put an end to them.

Sincerely,

M. K. Occhipinti

Subject: Against Mt Etna project at Crime La

Hello Mr. Cass,
This email is regarding the Mt Etna project where the Crime Lab is.

I have been a resident of Clairemont for more than 20 years. My family and I are against changing the zoning for this location. Our kids go to school at Mt Everest Academy, k-12 school with an open campus right across this location. This building will introduce many residents, some of who might jeopardize the children's safety if not supervised. The parking around the school will be difficult, it already is impacted by the increasing number of students, this will worsen it. Traffic will be increased multiple times and the area will be more prone to accidents, which further jeopardizes the safety of our children. The building will surpass the local height limit.

I hope all of these reasons and many more will be taken in co consideration to abort this project.

Thank you,
Marija Hristova

Subject: Mt Etna project - oppose!

Dear Mr. Cass,

I/we strongly oppose a project of this scale. To the point, this project is WAY too big for our residential area both in size (height limit) and number of people crammed into a limited footprint. The planners need to look at other possible sites to meet the objectives.

There are several other reasons for our objection to this project: Firstly it will become a magnet for crime! It will pack the surrounding residential streets with cars and adding to an already congested area. This will greatly impact the safety of the schools within a few hundred feet.

We are the PEOPLE who live here and our voices should be heard! We do not want this monstrosity in our residential neighborhood.

I speak for all of my family members. My wife and two adult daughters.

Sincerely,
Mark A. Flores

Subject: Mt. Etna EIR NOP Comment

Hello Mr. Cass,

I understand that today is the last day to provide input for the Mt. Etna EIR NOP. I cannot find a place on the county-provided website re: Mt. Etna's proposed project, so my husband and I will submit our comments here.

!The noise and disruption created during construction will be detrimental to the current residents in this housing area, and of particular concern to those who are immediately adjacent and across the street from the proposed site. The current building on the site may have materials that could create significant health hazards, aside from an increase in dust and dirt that will be generated and may create breathing hazards for current residents who have sensitive respiratory conditions.

!Traffic is of great concern. The location of this project is in very close proximity to a busy street and a busy shopping center. There is already significant traffic at the Mt. Etna/Genesee intersection and having a large facility with the only entry/exit on Mt. Etna just past the intersection will create delays and gridlock while residents wait for a clear path to turn into the facility.

!Parking will be of great importance in a facility the size of which is proposed. There is already insufficient parking, creating a need for current residents to park not only in their driveways, but also on the street. With the estimated doubling of the number of residents in this area, parking on streets in the neighborhood will become nearly impossible, and when parents arrive to drop off or pick up their children from local schools that are in immediate proximity to the proposed site, poses increased risk to children who are attempting to enter or leave school property. Building a large facility without sufficient parking included in the building plan is foolish and irresponsible.

!As mentioned in the previous bullet, safety is of primary concern with a doubling of the number of residents in the area. Aside from the increased traffic that will (absolutely) occur, which will create safety concerns for children who attend the area schools, there also exists a potential safety issue for current residents of the area, which can only be determined upon review of the residents for the proposed project. Without an increase in protective resources, there is more than likely to be a negative impact on the surrounding community.

There is also the issue of how to respond to fire emergencies in a building that is five stories tall without access on all sides of the building. In particular, access on the West side of the building is inhibited by high-tension power lines, which will likely preclude reasonable emergency response in the event of a fire, particularly on an upper floor.

!The safety issues extend to the proximity of those high-tension wires, as well as the location of the high pressure gas line, both the property of SDG&E. In San Bruno eight years ago a pipeline exploded, killing eight people and injuring dozens of others. This was in a neighborhood with single-family homes, no high-density housing close by, and it was still a devastating event. Imagine the aftermath if such a gas line were to explode essentially underneath a project such as the one proposed.

!We are unclear about the proposed services that have been referred to in the scoping meetings. It seems that there are a number of reports about what, exactly, will be included in this project. There is talk of 464 units, as well as a community center, limited parking, green space, and other resources for residents that are in need of community support. That seems to be a very ambitious agenda for such a small plot of land. The 4.09 acre lot

may *seem* large, but it will quickly fill up with all the proposed options included. This does not seem reasonable and it appears that any reasonably necessary resources will be foregone in the interest of increasing unit count. This is unfair to the community and, even more so, to the potential residents of the proposed project.

!∇There is already a lack of green space in Clairemont, and imposing such a large project in a community that sorely needs open space is detrimental to the well-being of the community at large, including any proposed residents. Green space should be a priority in San Diego, where we have the great fortune of being able to enjoy the outdoors year-round. Increasing high-density housing will contribute to the heat-sink condition of an already over-concreted community.

!∇Any housing project in this area will more than likely increase the number of students who will attend area schools. There are five schools in the immediate area: John Muir Academy, Mt. Everest Academy, San Diego Charter School, High Tech High (set to open soon), and Holmes Elementary, which is the default school for this area. In addition, Marston and Kroc middle schools and Clairemont and Madison high schools, which also service this immediate community, will see an impact in student attendance.

The schools are not equipped to handle such a drastic increase in student attendance. There are insufficient classrooms and insufficient teaching staff to support such an immediate and significant increase. This will lead to fewer available resources for these schools and, as a result, a lower quality educational experience for our youth. It is important to the future of San Diego as a whole to ensure our youth have access to quality, consistent schools and resources within those schools.

!∇There is limited access into and out of the proposed site. This was mentioned in the bullet above regarding traffic, but it is a significant issue and should be addressed. To date, when it has come up, persons who are in position to address the topic have sat stoically and not offered any comment on how that will be resolved.

There is a single driveway onto a residential road, a short ½ block from a major traffic thoroughway. Potential residents of the proposed project must approach the facility either from Genesee or Mt. Everest. Approach from Genesee will result in gridlock through that intersection as residents wait for traffic to clear to turn left into the driveway. Approach from Mt. Everest will only contribute to the gridlock on Genesee as they turn right into the facility and contribute to the inability of others to turn left into the driveway. This is not only poorly thought out, but shows either a blatant disregard for the existing traffic dynamic, or a sorely inept evaluation of the suitability of the site for such a large proposal.

!∇An issue raised by current residents who are immediately adjacent to the site is a concern about the resulting lack of sunshine and privacy that the imposition of a large facility overlooking their backyards will afford. This alone will negatively impact home values in this neighborhood.

!∇Finally, but also significantly, based on all input that has been provided, the size and architecture is not in keeping with Clairemont's community character. It seems to be more aligned with locations that have fashioned themselves into destination locations for transitory lifestyles, such as UTC or Mission Valley. The current proposal seems to lean to a high-density, transitory population, in that such a significant rental facility will lend itself to a population that is not committed to the Clairemont community as it is structured.

Clairemont desires to retain and continue to cultivate a bedroom community in which middle-income families can set down roots and remain as children grow and parents become grandparents. High-population rental facilities are engendered to attract individuals who choose to move from the location when other opportunities, be it a new job or a less expensive/more desirable apartment, becomes available. Clairemont has historically been a comfortable middle-class bedroom community that seeks to attract long-term residents whose interest is to better the community they are in, rather than viewing it as a short term stop over while on the way to something else.

thank you for your consideration.

Signed,
Mark and Kelley Zanfardino

Subject: Building

We have concerns about the Mt.Etna, Genessee project. We are concerned that the Balboa Ave. corridor cannot handle anymore traffic. Crossing the streets at that corner is all but impossible for the elderly. We have a terrible time as it is and more traffic will really hurt us.

We also have concernes about the height limits. We don't understand how the limits can be changed without a vote.

Please stop trying to ruin our neighborhoods just to get more tax dollars.

We are retired and have chosen our neighborhood and do not want changes that will not benefit all.

Subject: New low income property on Mt Etna in Clairemont

I am highly concerned on this development. It is was too big for our community. This is already a very congested area. To bring on potentially over 1000 more people to the area will cause even more congestion. Also, this is an area that has been turning around it's rough and tumble image of a military and blue collar town. The average home here is over \$550,000. New families are moving into old places and fixing them up. Now you want to dump a 400 unit complex in the middle of Clairemont with mentally challenged people and low income individuals. Why not put this in La Jolla or university city. They don't have any of these types of facilities. There is 1000 better places to put this building which would cost taxpayer less and keep an up and coming neighborhood on the right path. Thanks for listening.

Matt Beskin

Subject: Mt etna project

Marc Cass,

I cannot imagine that anyone who lives in the remote vicinity would think that this housing project is in any way a good idea for our neighborhood

In recent years, we have seen the Clairemont area truly blossom into a desirable neighborhood for families. It is in a great location, housing prices have drastically risen, and the population has transitioned into a higher concentration of young families and remains a relatively safe/convenient location for seniors that have raised their own families in this area. All have a close tie and investment into the community that has been created.

Should this high density, at risk housing development be approved, we would only see that deteriorate. We do not have the infrastructure to sustain 400 residence building.

As a registered nurse, I constantly work with this population and am comfortable in dealing with them in the workplace or walking downtown. But I do not want them in my neighborhood. Due to repeated drug use, alcohol abuse, lack of resources, mental illness that is underfunded/untreated, I can tell you that this is not the population you would want in your backyard. Families with small children do not want to deal with Harassment and safety concerns of such individuals. I want my kids to be able to play out in the front yard without constant fear of what type of person is walking by. I want them to be able to go to the park with their friends in this currently safe neighborhood.

If approved, I fear for the deterioration of our community and families will simply feel forced to leave.

Sincerely,
Megan Beach

Subject: Etna housing

Hi Mr. Cass,

I am writing because I am a very concerned homeowner. The Mt. Etna project is way too many people for an already congested Clairemont. I own a home less than a mile away and I am already concerned about the increase in homeless, petty crime, and traffic. This project will only make it worse. Please listen to the people that already live and pay taxes here—this project is not good for Clairemont.

Concerned resident,

Melody Crisp

Subject: EIR for Mt. Etna

Mr. Cass,

As a concerned community member I have some comments on Mt. Etna EIR:

- Where else in San Diego is this being done at such a high-density?
5 stories is TOO high-DO NOT CHANGE the current height restriction
- New high density plan will adversely affect near by schools that are already financially crippled due to repeated annual budget cuts
- How do you plan to address the crime in the area?
- Near by streets (esp. Mt Etna) are already too congested at peak hours; proposed high density will adversely affect local traffic and parking
- DO NOT CHANGE CURRENT ZONING

Too many low income housing in one area is bad for ANY community (and Clairemont will have multiple already assigned housing of this source) The COUNTY should look at other County properties to develop this housing.

Can the County answer these questions regarding new developments but NO affordable housing??

Town and Country Hotel = adding 850+ apartment units with NO mention of affordable housing
Midway/Rosecrans = 11,000 new homes and apartments with NO mention of affordable housing
Morena Blvd by NEW trolley station = 5,000+ units and NO mention of affordable housing
Downtown/Little Italy = So much construction going on with little to NO affordable housing being built. "We wanted the building to have class, character and a timelessness," said H.G. Fenton CEO Mike Neal during a recent tour of the Vici, one of the most luxurious new apartment buildings in San Diego County. Average rent for a 1 bedroom downtown/Little Italy \$2900/mo.

I know in the past the County has worked with community stakeholder in providing a 3rd party independent source to also gather community feedback. It think it would be a good idea to look into this.

Looking forward to transparency and that the County should be putting forth.

Respectfully,
Meredith, a Clairemont Resident

Suggestions for an Environmental Impact Report

Clairemont Mesa Community Plan Amendment and Rezone Project [WT-4224097].

AESTHETIC

Please conduct a review of the solar envelope of the proposed 5-story buildings to ascertain whether the profile will cast a shadow off-site, or whether the shadow will remain on the property. An off-site shadow will impinge on the rights of neighbors. This review should include daylight hours and seasonal effects.

Please conduct a review of the Venturi wind effect that could be created between the nearby buildings and the new structures. Include in the review whether this wind effect would also exist between the several buildings of the project. Be sure to account for Santa Ana wind conditions.

Quote from the County of San Diego Affordable Housing Phase II Feasibility Analysis of February 2018, “An exception ...can be applied for as long as the new structure is compatible with surrounding one, two, or three-story structures, as described in San Diego Municipal Code Section 101.0452.5.D.”

https://www.sandiegocounty.gov/content/dam/sdc/dgs/Doc/RES_DO_CrimeLabFamCtA FHAppA6.pdf

Please describe how the proposed 5-story structures are compatible with and matches the character of the current surrounding neighborhood of single family detached homes.

Will a park like open space be provided on-site?

HAZARDOUS MATERIALS

Please review the demolition of the existing building in terms of short term noise exceedances of the City’s noise standards, errant debris wafting over the neighborhood, and traffic consisting of dump trucks, bulldozers and other material handling equipment entering and leaving the property via limited ingress/egress points. Include review of debris holding areas and whether daily trips will be utilized to dispose of the debris. Include hazmat handling procedures if the existing building contains asbestos or similar material. Include whether water trucks, or other palliative measures might be necessary to reduce fugitive dust to protect nearby schools, businesses and residences.

Describe if the transport, use, storage and disposal of hazardous material is to be handled in accordance with the County Department of Environmental Health Hazardous Materials Division and conducted according to state and local regulations. Review

whether a Spill Prevention and Emergency Plan should be prepared as determined by the City of San Diego to respond to any construction related sewage spills.

NOISE

How will construction and demolition noise issues be applied against City standards, such as, will all noise-producing equipment and vehicles be equipped with mufflers, air inlet silencers and any other shrouds, shields or other noise-reducing features, and whether all of which will be in good operating condition that meet or exceed original factory specifications? Will all mobile or fixed noise-producing equipment, such as generators used on-site, comply with the City's noise standards? Will idling equipment be kept to a minimum and moved as far as practicable from residential areas? Will the use of noise-producing signals, including horns, whistles, alarms and bells, be used for safety warning purposes only? Will use of back-up alarms be minimized? If nighttime work is needed during demolition or construction, will a permit be obtained beforehand from the San Diego City Noise Abatement and Control Administrator?

ENDANGERED SPECIES

What protections will be used to protect endangered species? This should include no clearing, grubbing, grading, or other construction or demolition activities to occur for any coastal California gnatcatcher habitat during breeding season from March 1 to August 15. Applies also for the least Bell's vireo breeding season from March 15-September 15 and the southwestern willow flycatcher breeding season from May 1 to September 1.

CONSTRUCTION

Will material stockpiles and mobile equipment staging, parking and maintenance areas on-site be minimized? Will construction site and access road speed limits be established and enforced during the construction and demolition periods? In the event of any holiday moratorium, such as during the holiday shopping period, will all construction and demolition related activity be completely demobilized prior to the beginning of the moratorium periods?

Will best practices be implemented during construction and demolition to reduce particulate emissions, soil erosion and trackout? This includes covering any on-site stockpiles of debris, dirt or other dusty material. Will the use of adequate water and/or other dust palliatives on all areas be considered to avoid particle blow-off and to reduce dust amounts damaging to property, cultivated vegetation, domestic animals or causing a nuisance to persons living or occupying buildings in the vicinity? Will washing down or sweeping paved areas as necessary be used to control trackout? Will covers or tarps should be used on all vehicles hauling dirt or spoils on public roads if sufficient free board is not available to prevent material blow-off during transport? Will use of gravel bags and catch basins during ground-disturbing operation be used? Will methods to minimize public exposure to dust generated as a result of the proposed activities include covering sources, misting sources with water, reducing the pace of work and stopping work especially on windy days? Will a plan be prepared to completely contain, transport and dispose of all excess construction or demolition materials and construction fluids away from the site on a daily basis?

Will a construction fire prevention/protection plan be prepared prior to commencement of work?

Review tree removal procedures to include daily removal of all trimmings, wood stumps, roots, surface roots, other vegetation, debris and litter.

POLLUTION

Please review how construction and demolition related materials, wastes, spills or residues will be prevented from discharging from the work site to streets, drainage facilities, or adjacent properties by wind or runoff. Likewise how to ensure non-storm waste runoff from equipment, vehicle washing or any other activity shall be contained within the work site. Will covers and applying berm around loose stockpiled construction materials and debris that are not actively being used be implemented? Identify actions to ensure that sediment will not leave the site and the surrounding public streets shall be kept clean to keep sediment out of the storm drain conveyance system.

During construction or demolition, will material stockpiles be placed such that they cause minimal interference with on-site drainage patterns?

Will a Storm Water Pollution Prevention Plan be prepared and monitored by a Storm Water Pollution Prevention practitioner during demolition and construction?

TRAFFIC

Identify how to reduce potentially significant impacts by vehicle movement and access to surrounding roadways during three phases of the project: demolition, construction and duration of the project. Consider rush hour traffic northbound in the morning and southbound in the evening along Genesee. Similarly consider east and west bound traffic along Balboa Avenue during morning and evening rush hours, especially after the Mid-Coast Trolley is operational in 2021.

Review preparation of a Transportation Demand Management plan to limit the number of construction worker trips that travel through adjacent and impacted intersections and roadways during peak periods, as well as parking in the adjacent neighborhood. Review use of other mitigating steps such as a rideshare program, adjusting worker schedules to avoid access to the site at peak hours, providing off-site parking location for workers such as at the County Operations Center and shuttling them to the site and providing transit passes for construction workers.

A Traffic Control Plan should be prepared to include an accessible pedestrian access plan through the construction zone with approved signage. This would include description of vehicle traffic during demolition and construction via the proposed single ingress/egress to the site and impact on adjacent road wear and tear from heavy equipment and vehicles and disruption to existing traffic on nearby roads.

If sidewalks are closed, describe if an alternate walkway would be provided. Show how pedestrians will not be directed into direct conflict with vehicles operating within the work site or other traffic. When it is necessary to divert pedestrians into the parking lane or a street, show how barricades or temporary traffic barriers shall be provided to separate the pedestrian walkway from the adjacent traffic lane. Show what procedures will be used if crosswalk closures are necessary. Show how roadways adjacent to the work site shall be kept free of obstructions or other hazards to bicyclists.

Show what barriers, guards, lights, signs, flag persons and watch person will be used to comply with public safety requirements that may arise. Show what traffic control will be used for access of local pedestrian and vehicular traffic.

Review the addition of tenant traffic to the neighborhood considering available ingress/egress portals. Include anticipated additional traffic along Balboa due to the Mid-Coast Trolley being completed in 2021. Describe how this location is a suitable location for use of local transit when there is only one bus line, number 41, which could effectively take residents to work sites with transfers, using as a reference the designation of Fair/Poor for this location's Transportation Amenities on page 20, Table 3-8 of the previously referenced Feasibility Analysis.

Review time of day construction and demolition to avoid daytime rush hour traffic jams and to minimize the number and type of operating equipment, especially noise generating equipment.

Will driveway access for nearby businesses and residences be disrupted during the demolition and construction phases due to construction equipment traversing the single ingress/egress to the site?

Review how roadways adjacent to the work site can be kept free of obstruction or other hazards to bicyclists during demolition and construction.

EMF

Review the deleterious short term and long term effects of electromagnetic field radiation from nearby high tension power lines on the tenants of all ages especially those living on the upper floors of the new multi-story buildings.

PARKING

Conduct a review of the likelihood of tenant parking off-site in nearby neighborhoods and/or parking lots of nearby shopping areas, despite having one parking space for each unit on site. Will the proposed parking structure be enclosed? If so, will exhaust fans be implemented to remove noxious fumes? Will CO2 monitors be installed with alarms connected to a central security office?

UTILITIES

Review the increase in water, sewer, gas and electric services which will be required for the new residential towers. Include a review of additional fire protection requirements for high-rise, high density residential towers.

PUBLIC SERVICES

The report should describe the lack of County resources in the vicinity of the site.

AIR QUALITY

How will mobile and stationary equipment meet San Diego Air Pollution Control District emission standards during demolition and construction?

Subject: Proposed Mt. Edna Low income housing project - My comments

Dear Mr. Cass,

I am a third generation Clairemont resident. I love this neighborhood and I want to see it grow and prosper. I understand San Diego has a need for affordable housing. However,:

1. Clairemont already has more than it's fair share of low income housing. The Stratton is a large 312 unit 100% low income housing development just two blocks away from the proposed Mt. Etna site and,
2. An additional 500 units of 100% low income housing in the community core will degrade our community.

Clairemont has done it's fair share. Other communities need to step up and do their fair-share.

Subject: Mt. Etna Project

Hi Marc,

I own a single family house in Clairemont's Mount Streets. I am concerned about the new Mt. Etna Project. This portion of Clairemont already has numerous apartment complexes and a lack of parking. Genesee is already very congested. It seems that there are other options with better access to public transit for this type of a project (e.g., locations along the new trolley line). Other options could include those in Mira Mesa or further east. The Balboa/Genessee thoroughfare is very densely populated. There is already another, albeit smaller, transitional housing project blocks away on Mt. Alifan (which is practically adjacent to a bar). A community focused development would be fantastic (the area seems to be at a crux between the industrial businesses in Kearny Mesa and the residential neighborhoods to the west). The recently developed High Tech High would have been a nice addition to the area, but it is unfortunate that it does not directly serve the neighborhood. The neighborhood is in need of development that supports its existing community and brings it together. There are already numerous apartment complexes and single family neighborhoods.

Happy to discuss.

Thanks,
Mike

Subject: Clairemont low income project

Marc,

I want to join the community here in Clairemont to support the fact that this proposed low income housing project is a grossly negligent project. Over populating a community that is already over populated and greatly increasing the risk of crime and dangerous circumstances with 3 elementary schools all within a mile of the proposed sight. Along with deflated home values you are putting together the potential destruction of all the gains Clairemont has experienced over the previous years. I understand there is a housing crisis in SD, but the level of risk this project brings to the community of Clairemont is far too great.

Subject: I'm So happy about this project...

Congratulations Chelsea Investment Company on the contract to build on the site of former county crime lab! Your prior buildings look beautifully designed. I am looking forward to the proposed drawings of this site.

Please include as much public access to the Senior Rec Space that I have heard about. Our schools and public buildings in Claremont are lacking workable, flexible space for community meetings, small faith groups, scout meetings etc. This might even be an ideal location for the Claremont Town Council or Community Planning Group to hold their meetings. I implore you to make sure this community space is large and openly accessible to the public. Maybe an upcycle center (thrift store) staffed by any of the proposed residents could be scheduled for rotation in the rec center space? (We like our garage sales in Claremont) Maybe we could get some local teens to teach computer skills there? Could an immunization clinic be started at time-sensitive parts of the year (like the beginning of fall) Really, the possibilities for a large area are endless.

Could there be space permanently dedicated to an intergenerational garden and farmer's market? Maybe a WIC or CalFresh store/ eligibility center tied into the garden. Building up shouldn't take away green space. Maybe there could even be a vertical garden incorporated into the building design particularly facing the neighbors behind the complex as they are very upset about living so close to this increased height building. Please work with already established community, government, and faith resources. The more you listen to smart, obtainable suggestions from these groups the more the community will embrace the project.

I think that this project has an immense amount of potential for integrating SDUSD and other government agencies into making the space a vibrant, community based center.

I am interested to know if Chelsea Investments will also be the property manager of the building, and if so, what are the maintenance plans? How will the residents be assured of continued rental space?

Please keep me updated. I am very interested in helping make this project a happy reality.

Thank you,
Michelle Meade

To: Cass, Marc
Subject: Mt. Etna Project

Dear Marc,

I'm contacting you regarding a Zoning change that would allow for a large low-income apartment building in my neighborhood.

Both my husband and I have worked so hard to finally purchase ourselves a home in a safe neighborhood for our child. Every hard earned penny goes to our mortgage and our taxes so we can call this place our home. We are very level headed people and completely understand that there is a need for this type of housing, but we too come from families with mental disabilities where we understand the unfortunate severity of many of these future residents' conditions. We cannot have that around our little 2 year old, specially not for the price that we paid to be in our home. We are 100% opposed to this development and we are beyond heartbroken about the idea of packing up our belongings and selling our home, if the rezoning of this site does get approved.

Our concerns are as followed:

The low-income housing development at 5255 Mt. Etna Drive projects 450 plus single-family units into a four-acre space in a neighborhood that currently has around 300 single family homes. This will more than double the population of our tight knit community in one fell swoop, creating a great weight on the local infrastructure. The plan for those 450 units only procures around 250 parking spots, further impacting the traffic and street congestion. I am also concerned with the proposed development's close vicinity to the schools that my children will be attending in the years to come (two tenths of a mile from the proposed building site). I am inclined to also point out that one reason for choosing this location is that the county feels the area is a transportation hub...with that in mind a feasibility study done in February 2018 done by our own county rated the transportation in this very area as fair to poor. Which forces me to ask what has changed in the last 10 months to make it such a hub of transportation? Lastly, I worry about the "special needs residents" that the county wishes to house in this building with no local major health facilities in the immediate area.

I appreciate your time, and I would appreciate your vote of no regarding the rezoning of this area.

Subject: Mt. Etna Housing Project

Mr. Cass,

I and my neighbors are vehemently opposed to the Mt. Etna housing project on the site of the former crime lab based on the RFP specifications. My major concern is the density. Please keep in mind the Mt. Alifan project is already bringing almost 100 new residents to the immediate vicinity, as well as the High Tech High School opening soon, which is a charter school that requires transportation to the area for almost every student. I live at Balboa and Genesee directly in the middle of all this and witness first hand on a daily basis how impacted the area has already become over the years and how terrible the traffic is even on the weekends. Parking is already a complete nightmare with the current overcrowding of homes in the area. And the proposed number of units in excess of 400 will surely require a variance of the 30 foot height limit. A height limit on which residents have based home buying decisions and count on the City to adhere to. The influx of residents will increase the number of children that will put more strain on an already overburdened public schools. And although I'd like to remain optimistic towards the low-income housing aspect, we already have enough problems with crime at the low-income housing development on Mt. Alifan. As you can tell, my position is "enough is enough". This area of Clairemont is already doing its part. Other neighborhoods need to pony up and do theirs. The residents that live here have worked very hard for the right to enjoy their homes. Don't allow the past failures of our civic leaders continue to downgrade our quality of life by trying to push through a quick fix.

Marc

Writing this as a concerned resident of 17 years in Clairemont. This proposed development at Mt. Etna/ Genesee is going to cause major issues in our community. Simply put too many people are being dropped into a neighborhood that doesn't have the infrastructure to support it. There is no room in the current schools. The Vons across the street can barely handle the crowds as it is. Traffic is already ugly at that intersection.

Subject: Fwd: comments for housing project

Good Afternoon Mr. Cass,

I was made aware of a low income housing project proposed for 5255 Mount Etna Drive in Clairemont. I live in the adjacent neighborhood. I have two young children. I am concerned there is not proper infrastructure to support a high density development in the area. How will there be space for the schools to absorb that many children all at once? There are not any drug rehabilitation centers or hospitals in close proximity. Will it be safe to send my kids to Rite Aid to get ice cream? The closest park is Mount Etna neighborhood park. I am scared they will be sharing the park with recovering addicts and mentally unstable people.

It does not seem that the plan for the housing project includes any additional parks, parking, or schools. It is important above all else that San Diego citizens feel safe and have an opportunity to obtain a quality public school education. I toured Holmes elementary last week and we already have kindergarden classes at 27 kids per class.

I appreciate your time and concern on the matter.

Subject: Mount Etna housing

Hi, my name is Makalani Hudgens. I moved into Clairemont when I was 3 years old to attend Lafayette elementary school since they had the deaf and hard of hearing program there. I've grown up in Clairemont until I was about 21, I moved out of Clairemont/San Diego with my son. I couldn't find any apartment in Clairemont that will approve me with my low income, I was just a SSI issuer. Now as of I am reading the news about the housing for Mt Etna. I am thrilled about that because I would love to move back in Clairemont where I grew up. I have a 6 years old deaf daughter now and my 16 years old son is living in Clairemont with his aunt right now and is attending James A Madison High School as a junior in the music band. I would love for my daughter to be grown up in Clairemont and attend Lafayette, CPMA and Madison. I will support the idea of housing the units to Low Income Families, Foster Youth housing transitional (18-21, maybe 24) but I don't like the idea of homeless and sober living being in Clairemont with this housing project. Please do let me know if you would like me to come out and voice my concerns too. Thank you.

Sincerely,
Makalani Hudgens

Subject: Mt. Etna construction nightmare

Expires: Wednesday, April 17, 2019 12:00 AM

Marc, Chris, Daniel -

While reading Clairemont's Nextdoor site I had seen that that there was a deadline to voice opinions for the proposed building of low income housing in our neighborhood.

I opted out of going to the meetings knowing that it would be a screaming match and no one on the board would be listening but needed it to passify the public so the public thought that they were being heard.

Here is my opinion (which I am sure won't mean squat):

I have lived on Mount Herbert Avenue since 1973. Where I live is close to the Genesee light. It is a race for cars to get to and from the light - cars cutting through the streets from Balboa Avenue to avoid the Genesee traffic mess - coming out of the side streets non-stop and not stopping at the stop signs on the corner and then racing down Mount Herbert to get to Genesee Avenue. (and returning the same way) So this is a little lesson on traffic that we have going on now.

THEN TO ADD the 800 more cars (everyone has at least 2 cars) that will be using these back streets to race to take shortcuts is ridiculous.

If someone worth anythings would sit and watch how many cars turn down Mount Etna from Home Depot intersection that turn on Mt. Everest to go to Balboa Avenue then to ADD all those extra vehicles they would need to build a freeway!

Where the hell would everyone park? OF COURSE - all over the neighborhood!!!

When we moved in here Clairemont Hospital was on that site. Loved having the Sheriff's Crime Lab there because it didn't generate the traffic.

We didn't buy in this area to have this be happening.

While driving on Market Street a couple weeks ago there was OPEN LAND that they could pick to build. Would be plenty of room for parking. Loitering. Buses. Grocery store. Or anywhere else for that matter.

I am assuming that none of you live in the Clairemont area or you would have the same opinion. Maybe your area would be a better choice of location.

LETTING THIS BE BUILT WOULD BE A NIGHTMARE FOR THIS ENTIRE COMMUNITY!! FIND ANOTHER LOCATION THAT WON'T HAVE AN IMPACT WITH TRAFFIC, LOITERING AND MORE FOOT TRAFFIC AND TRASH.

WHY DIDN'T SOMEONE WITH *COMMON SENSE* NIP THIS IS IN THEY BUD BEFORE IT GOT TO THIS LEVEL? (oh yeah, probably money greed - someone got paid a pretty penny by the developers!!)

Please forward this to someone who may do something about this stupid developing in a residential community.

Mrs. Stewart

To: Cass, Marc
Subject: Mt Etna Project

Dear Mr. Cass,

Regarding the Mt. Etna Project, its current proposal of making this project all low-income house, building 400 to 450 units on 3-acres including 0.5 parking spaces per bedroom, and raising the Clairemont building from its set 30 feet, is a BAD IDEA. Modify the numbers of units or change the location.

Firstly, don't make the project all low-income, include other socioeconomic income levels. Councilman Scott Sherman of Allied Gardens commented on housing where 100% of the residents are low-income in The San Diego Union-Tribune dated Sunday, August 19, 2018:

He supports inclusionary housing, calling it the antidote to housing projects that become riddled with crime partly because 100 percent of the residents are low-income.

“You want to have people of all socioeconomic groups working together and living together and getting to understand one another,” Sherman said.

Secondly, lower the number of units significantly. If you put 400 to 450 units on the Mt. Etna property, you will create high-density problems in these areas. The Genesee/Balboa/Mt. Etna areas already have traffic flow problems in the morning, at noontime, and after work. They already experience parking problems on neighboring surface streets and on neighboring shopping malls. If you consider 2 to 4 people in 400 to 450 units, you are adding at a minimum of 800 people to a maximum of 1800 people assuming no more than 4 people per unit in 450 units. Adding that many people and their cars to the areas will exacerbate the already existing traffic flow and parking problems.

Lower the number of units significantly or move this project near a freeway. In Mira Mesa, spacious, luxury Casa Mira View apartments house thousands of people. The apartment development offers many amenities to encourage its residents to remain on the premises. And when they need to commute, their location next to the freeway makes it easy for them to take the freeway minimizing inundation of surface streets.

Do not assume putting the Mt. Etna Project along a bus route means its residents will take the bus. For the most part, like most residents in Clairemont, they will take their own car to commute. It is best to locate the Mt. Etna Project next to a freeway.

Lastly, keep the Clairemont 30-foot height restriction. Let's not re-interpret what 30-foot means. It is a literal measurement meant to limit the height of buildings. Keep the 30-foot height limitation. If a builder wants to

exceed that limitation, he/she can request for a variance. The variance application provides the county planning and development department time to examine whether this is good or not good for the Clairemont community.

To reiterate, modify the Mt. Etna Project by including other socioeconomic income levels, not just low-income. Lower the number of units significantly to not exacerbate the already existing traffic flow and parking problems. Relocate the Mt. Etna Project near a freeway so commuters from this project do not inundate surface street flow. And keep the Clairemont 30-foot height restriction. Builders can still request a variance.

On a different, yet related topic, revisit whether builders can have an option to buy their way out of having to provide 10% housing for low-income residents to help address the affordable housing need. Are the funds received from builders taking up this option sufficient to build affordable housing for residents of varying socioeconomic levels? It would be interesting for you to look into.

Thank you. I wish I could attend tomorrow's meeting, but I have a previous engagement. I will, however, be emailing this to Marlon Pangilinan and Councilman Chris Cate.

~Arlene

Subject: Mt. Etna Crime Lab redevelopment

Mr. Cass,

As a resident of the area (5076 Mt Harris Dr), I would like to express my strong support for this project. San Diego's housing prices are unaffordable; the only solution is more stock. I think the smartest way to add stock is to upzone in current low density areas, Clairemont is a prime spot for more density.

Please feel free to contact me if you need a more balanced view on development. Generally, the majority of people who show up to these community meetings are older and very resistant to change. Unfortunately, people like me who support sustainable development have young children are not always able to make the meetings.

Thank you for you time.

Gregory Hawkins, PE

Subject: Mt. Etna Project at County Crime Lab

Hello Mr. Cass,

As a resident who resides very near to this location I am quite concerned regarding the number of units proposed for the Mt. Etna site in Clairemont. My primary concern is traffic on Genesee. The evening commute down Genesee is already quite congested, adding hundreds of units to this part of Genesee will most certainly increase the traffic and lengthen commute times.

My objective with this email is to ensure that we as Clairemont residents will have input on the scope, height and number of units for the proposed site prior to the city moving forward with any permitting.

I look forward to hearing any updates you may have.

I appreciate your time,

Julee

Subject: Mt. Etna Project Support Letter

Hello Mr. Cass,

I am a resident down the street from the proposed project on Mt. Etna in Clairmont. My husband and I recieved a letter from Karen (not sure who she is) about the project and we would just like to say that we are in SUPPORT for this project.

We fully support the height limit being raised , increased density and the need for affordable housing in San Diego.

We were unable to make it to the meeting last night because I am due with our 3rd child. We will try and make it to the next meeting but with a new born it is very unlikely. Please feel fre to share this letter of support for the project with who ever may be interested.

Thank you,

Abbie Hawkins

Subject: Clairemont Project

Good morning Marc,

We are residents of Clairemont and have major concerns with your project proposal. We live on Mount Frisell drive and are only a block from the low income properties you are proposing to build. While the idea is great and I understand the need, this is a tight community with school and businesses all around. Please re-evaluate your project as you would have concerns, like any parent, about your children's safety and crime rate if you lived here.

Subject: Mt. Etna crime lab project rezone

Hello Mr. Cass,

I wish to express my concern over the proposed Mt. Etna crime lab project rezone.

I live in the Mt. Etna neighborhood, and I have a child in preschool who will attend Holmes Elementary. I am already concerned about the potential class sizes at Holmes, with the current ratio being 1 teacher to 25 students. With the addition of 400 units in the neighborhood, that ratio can only be expected to rise, compromising the classroom and learning environment. I am also well aware of the current traffic patterns in the neighborhood, with the intersection of Genesee and Mt. Etna already backing up well before 8:20 in the morning during school drop off times...again, this will only get worse with the addition of 400 units. I have seen cars attempt to speed through our neighborhood to avoid traffic backups, at speeds well over the 25 mph zoning. This concerns me with all the young children in the neighborhood, and this despite our street already having speed bumps to address such issues.

Children frequent the Mt Etna Park area, and I am not sure the project leaders have fully assessed the possible impact of 400 additional units, with multiple occupants to each. Public transportation stops are minimal at best, and it seems it would make more sense to have such a multi-unit property where multiple bus routes and trolley access would be more accessible...where will the additional cars park? Will there be additional patrol in the area as density increases? Will the canyon access at Mt. Etna Park be monitored for safety and encampments? We don't have answers to these questions, and as a parent in the community I don't feel that due diligence is being paid to exploring the effects and impact on the neighborhood.

Please reconsider this project, as the size of the proposed lot is not adequate for the scope of the proposed project.

Thank you for your time,

Nancy Jungling

Subject: Clairemont Mount Etna Project

Dear Marc / Clairemont City Planners:

In 1997, we scraped together our hard earned dollars to purchase a “fixer upper” in Clairemont. We chose the “Mountain Streets”, as this appeared to be the optimal area close to work and community.

We have watched this neighborhood evolve, from original aging owners, in many cases, to young families, with children that feel safe riding bicycles and walking to the neighborhood parks and events. We have all spent “hard earned dollars”, into making this neighborhood updated, and drought tolerant.

So, to hear of this new project, suddenly, re: an up to 500 unit complex that will increase an already congested area, into a traffic and parking nightmare. With the variety of patrons to be housed, we question autonomy.

We therefore vehemently oppose this project, and refuse to have our tax dollars support this going forward without our community permission.

Sincerely,

Nancy M Woods, and James Sofios at Mount Castle Avenue

Subject: Mount Etna project at the crime lab

Hello Mr. Cass,

I resident of Clairemont for more than 20 years. Like to voice my opinion about the project on Mount Etna at the crime lab. I am absolutely against changing the zoning of the location to accommodate so many residence and especially residents with developmental handicap. My kids go to school at Mount Everest Academy we just a few feet away from the location and walk freely on a daily basis together with their friends. The school is an open campus and there is another nearby school Muir Elementary that could endanger the safety of the children. The traffic will be immensely increase with this population and the infrastructure is not designed to support so many people on this location. The apartments that you are trying to build an mainly one bedroom apartments and as claimed this will be mainly for families, which is contradictory. I'm absolutely against this project changing the zoning and going forward with it. I appreciate you taking our input on them. If there is any other way I can get involved and stop this project please let me know.

Sincerely,

Nazeeh Shaheen

Subject: RE: Mt Etna Complaint

I did speak with Mr. Hagood and let him know if we had any answers to the FAQs asked in the two meetings we would be sure to send them to him. He also mentioned that he had already sent a letter to Marc and was planning to send letters to the Board of Supervisors.

Subject: Mt Etna Complaint

George Hagood – Georgeh73@icloud.com Mt. Etna – wants to voice his very strong opinion against this project. Wants to use the building for a hospital as it was intended and use it to treat older adults with dementia and Alzheimer’s. The high rise will ruin the neighborhood and they don’t want that in the area.

**Thank you,
Sabrina Powell

Subject: Mount Etna Project

Importance: High

Dear Marc,

My name is Nicole Dietz and I have been a resident of Clairemont Mesa for the last 10 years and of San Diego for 42 years. I am sickened by the irresponsibility of the proposed project for low income apartments on the corner of Mount Etna and Genesee....1 block away from a HIGHLY ranked elementary school (rated 10 out of 10 on Greatschools), a few blocks away from a Park and near multiple families. While I am not opposed to this type of housing...this is a completely irresponsible location for such establishment. Additionally, the congestion and space is not sufficient to support the additional units.

Clairemont Mesa is an up and coming location. We are in the process of signing a \$300K construction contract to upgrade our home and are no seriously considering relocating as our family is a few blocks away on Mount Harris.

This project cannot go through. Would you like this 1 block from your home????? There will be quite a few people relocating if this project is not stopped.

Nicole Dietz
Vice President, Controller

Subject: Mount Etna Project

Hello Marc,

I live in the mount street neighborhood off of Clairemont and am very concerned about the proposed re-zoning project at the old crime lab. I only became aware of this issue tonight and would have attended meetings if I had known before.

Additionally it is concerning that there are so many low income / high risk projects within a close vicinity in Clairemont (reference Mt Alifan).

In particular, I am concerned about parking, traffic impacts, safety / crime, and the negative impacts on the community in general. Finally, I am concerned about the potential negative impact on the value of my home. It does not appear as though these concerns were adequately addressed.

I drive and walk by the old crime lab project on a daily basis, so this would heavily impact me.

Please do not move forward with this project as proposed.

Thanks,
Nicole Maston

Subject: Mt Etna project site

Dr. Mr. Cass,

Please do whatever it takes to stop the rezoning plan for the Mt. Etna crime lab site. I was born and raised in Clairemont and now enjoy raising my children here. I am sure such a change would harm this fine community. I do not want this proposed site to be a high-rise building for any reason. I also think the addition of low income residents is not a safe move for this community. Please stop this huge mistake.

Sincerely,
Nicole Spuhler

From: Norman Johnson <njohnson22@san.rr.com>

To: Cass, Marc
Subject: Reject rezoning for low income housing

Dear Mr. Cass,

Four hundred units for seniors, families, and developmentally disabled people along with hundreds of parking spaces far exceeds reasonable usage of the property at Balboa and Genesse. Clairemont neither wants nor needs this blight on our community.

Heavy traffic already present in this area guarantees more L.A type congestion.

The proposed development will crush property values in the surrounding neighborhoods.

Schools will be heavily impacted and danger to Children will be greatly heightened.

As has been demonstrated on numerous similar projects, crime will increase thereby negatively effecting adults and children alike.

Please Mr. Cass, do all you can to prevent rezoning for this unfortunate project!

Sincerely,

Norman Johnson

P.S. Why have we not heard about this plan before?

Subject: Mt. Erna Project

Hello Marc! I am writing to you to let you know how much I oppose the Mt. Erna project. A five story building with 400 units in that space is beyond ridiculous. That general area is already overcrowded and to add 700-1,000 more people is incomprehensible. A scaled down 2 story 50-75 unit building would be more doable for that area. Better yet, how about building this huge project on a different site all together. The county has plenty of vacant land. High rise buildings belong downtown, not in Clairemont!! Pam Sobczyk

Subject: Mt. Etna Project

Dear Mr. Cass,

As a resident of Clairemont I strongly oppose the Mt. Etna project as it currently stands. 400 units in that section of Clairemont will add a significant amount of traffic and noise to an already overcrowded area. I'm not opposed to more housing there but I'd like to see fewer units.

Clairemont is a wonderful community already filled with low income families. The majority of the schools in the area receive title 1 funding and the parents in the community have taken a proactive approach to moving away from that. Adding this project to Mt. Etna would set back their efforts. Please oppose this project in our area.

Sincerely,
Rachel Semanosin

Subject: Mount Etna Low Income Project - Upset Clairemont Resident

October 18, 2018

Marc Cass, County of San Diego, Department of General Services
Chris Cate, District 6 City Council Member, San Diego City Council
Naveen Waney, Chair, Clairemont Community Planning Group

Hello,

I recently learned, by word of mouth, of a plan to cram in a massive 400+ low income unit complex into a tiny 4 acre lot off Mount Etna. Every single house in our neighborhood is a single-detached dwelling... and has been since inception of our neighborhood. I honestly have no clue how someone dreamed this plan fits within the character of our neighborhood. There is a reason why this land was zoned for commercial use only; it was NEVER intended to be residential... especially not a giant 5-story complex.

The number one priority, when planning a project of this nature, should be to safeguard the essence of the target neighborhood. This project doesn't do that. This project actually tears at the very fabric that makes our neighborhood so great. This project is exactly why we didn't buy downtown or in University City. We bought here because this area wasn't built up. What's being shoved down our throats essentially doubles the number of residents of our neighborhood by shoehorning in this behemoth complex into a tiny lot that was NEVER intended for residents. IT DOESN'T FIT HERE!

We don't want this project for a number of reasons:

- !Ã **Traffic congestion.** Traffic here is already a bit tough to manage. Cramming in 1500+ additional people is going to make our neighborhood really frustrating to navigate... and will potentially double my commute time.
- !Ã **Elevated Crime.** Crime is ALWAYS higher in low income areas. I'm certain the majority of people set to live in this complex would be lawful... we all get that; unfortunately, a high percentage won't be. Crime in our neighborhood is pretty low today, but your plan would drastically increase the crime rate. We feel safe in our neighborhood today, but that'll change with this proposal.
- !Ã **Commercial Zoning.** The zoning for this area is not conducive to this plan. This land is not zoned for residential use. We are NOT open to a change in the zoning.
- !Ã **Single Entrance.** Looking at the plan, there's only one entrance. Seriously?
- !Ã **Public transportation.** I'm guessing the majority of people housed in this proposal would utilize public transportation, yet the bus system in this area is pathetic at best.
- !Ã **Five stories.** The size of this project is completely absurd and doesn't fit the character our single-family detached home neighborhood.
- !Ã **Real Estate Values.** This plan will absolutely cause our real estate values to tank.

I have to bring up communication on this project. This part is pretty infuriating. The communication from the County... or the City for that matter is an absolute train wreck. The fact that this project kicked off months ago and we just learned about it on Monday is stunning. Seriously, what's wrong with this picture? At a meeting we attended on 10/15 it was stated that notices were mailed out... yet only two of roughly 100 people who attended the meeting received these notices. If notices were going out, and only 2% of the people received them... where did the other 98% go? The perception doesn't look good... and actually seems pretty suspect.

Look, I know there is good reason to push for these projects... and I'm sure your hearts are in the right place... but shoving a project like this down our throats... into a neighborhood of single family detached homes is just awful. The fact that I need to point that out is pretty unbelievable.

What little time we have left will be spent trying to get the word out. EVERY resident I've spoken to in our neighborhood is completely against this plan. Every single one. I'm hopeful the County and City will reconsider another area where this project actually fits. The Mount Streets of Clairemont is NOT the right fit.

Respectfully,
Randy Cremer

Subject: Mt. Edna Project

County of San Diego
Department of General Services
5560 Overland Avenue
San Diego, CA
October 16, 2018

Attn: Marc Cass

I've been a Clairemont resident for 59 years and have appreciated the opportunity to raise our children and grandchildren in a quiet friendly safe environment. The fact that this Mt. Edna Project along with the Mt. Alifan Project has changed our community into a low income housing district is heart breaking. Not only would the rezoning cut our property value in half, it would greatly impact our small neighborhood schools and our family park and little league field would be the perfect place for an "undesirable element" to hang out exposing our children to numerous dangers. The Balboa/Genesee intersection is already very congested, so I can't even imagine what would happen with the addition of 454 more cars, not to mention the added street parking that would be needed too accommodate all the additional cars in the neighborhood! I know for a fact, to avoid that intersection, traffic would re-route through our quiet neighborhood streets causing a danger to the children and impacting the quality of our already deteriorating roads, because it is already happening.

I understand the need for low income housing, but why put it in the middle of a quiet family community with the excuse that it needs to be close to public transit and stores. I'm pretty sure there must be less expensive land available in east county that has easy accessibility to the transit system, supermarkets and stores.

I know you've already heard all these concerns and much more. I am adding my voice to the 100's of families that say.....we don't want the Mt. Etna Project and all the crime, traffic, parking, congestion, noise and pollution that would come with the rezoning of our family community. I can only hope that someone is listening. Thank you for reading this.

Subject: Mt. Etna Crime Lab

I am a 10 year Clairemont resident, mother of 2. I understand the need for affordable low income housing and I am not saying that we shouldn't be creating options for all people or "not in my backyard", however the sheer size of the project concerns me. A 450 unit affordable housing option is too big for this small single family home neighborhood. Without adequate parking options, the traffic and spill over will affect the whole neighborhood.

My other concern is the mentally ill and drug addicts. Again, I support finding a place for them to live and thrive...but also have concerns about how that will affect my own children, 10 and 13. We are trying to give them increasing independence in this community, but if it becomes a place where I have to worry about what/who they will see/encounter, I will have to restrict that freedom more.

I would be more likely to support a smaller scale, family and elderly affordable housing project. It seems that if something is going to be put in that space, it should help people AND fit the community. There are a lot of good families in this neighborhood who would support helping other families get back on their feet. We also have a lot of elderly in the neighborhood and maybe some type of connection could be made there. But drug addicted and mentally ill people are not the right fit. We already have a growing population of them in our community parks and in the nearby shopping centers. Break ins for those living closest to the canyon have been on the rise.

A 450 unit complex is NOT right for our neighborhood.

Thank you for your time.

Subject: Public Scoping Meeting Comments. Case No. WT-4224097

Please address these comments in the EIR.

- 1) Fails to follow community plan.
- 2) Effects of increase density (400+ units/1000+ people) to adjoining single family neighborhood.
- 3) Increase in height (double) above 30' height limit.
- 4) Lack of ingress/egress for 400+units.
- 5) Visual effect and neighborhood character.
- 6)Effects of increased traffic and circulation on existing 2 lane neighborhood streets. Include cut through traffic from Balboa Ave. and Genesee Ave.
- 7) Lack of public transportation. Currently rated fair/poor.
- 8) Loss of job opportunity due to rezoning.
- 9)Conflicts with Specific Plan Guiding Principles of ensuring"that new development respects general mass, volume and scale of the existing built environment",and "to improve visual quality". Visual Effects and Neighborhood Character impacts would be significantly lessened with a Low Height, Low Density alternative.
- 10) A combination of Seniors, Disabled, Mentally Challenged, Low Income and Affordable Housing tenants at one site is experimental and untested. Empirical and anecdotal evidence would imply such a cramped site and proposed density would cause sever problems and even failure for many of the people most in need of assistance. There is no site in the City or County that has this mix in one small location. 400+ units, 1000+ people. No facts point to success.
- 11) Air Quality due to increased traffic and LOS F intersections.

Subject: Mt. Etna Project

Marc,

I have been to most of the meetings regarding the project and I would like to voice my concerns.

First off I fully agree that this property should be redeveloped and put to good use. I also agree with putting Low Income housing there with approval.

The parts that I fully disagree with is the density you are requesting. Lot is permitted to just over 100 units and the county wants to put in 4 times that amount. This is just too much density to put in a tight area like this. Especially without it having exit to a major road.

You have to realize the major push back on this is because if it goes through then you have opened the door for other properties to be changed from Commercial to Residential with a high density. Just look around at all the commercial property that could be bought and changed into high density. Just not acceptable.

It's still confused why the county is actually trying to put such high density there. Just put 100 units and move on. That would be two new projects withing 4 blocks of each other within the next 2 years.

Also I heard the developer can opt out of low income with a fee. This is not acceptable.

I have been in Clairemont since I was 6 years old. I have been in my Clairemont home for over 23 years which is a few blocks away from the Mt Etna project.

Thank you for your time.

Subject: Case No. WT-4224097 Former Crime Lab Project

I am opposed to the zoning change for the 5255 Mt. Etna Drive (former Crime Lab) project.

Don't change the zoning from DISCRETIONARY to MINISTERIAL. The Mount Streets of Clairemont are a community. The height and other issues could be changed at the whim of the developers and the community needs to be able to have input. The community west of Genesee Avenue is made up of all single family homes. There isn't a tall building or apartment complex anywhere in the area. There is an ELEMENTARY SCHOOL at Mt. Etna and Mt. Everest. The SAFETY of these children should be a BIG CONCERN, with the tenants in the proposed complex to be made up of 1) Persons with serious mental illness or substance abuse, 2) HIV/AIDS persons, 3) at risk youth, 4) survivors of domestic abuse. This Mt. Street community is made up of middle class residents who have worked hard to maintain a comfortable and well kept home. The quality of life for these residents would be compromised by adding **over 400 units**. Nothing has been mentioned about green space/recreation for the area. Where are the tenants going to go - into the streets?

The Genesee Avenue businesses, Target, Home Depot and Sprouts, create a huge amount of traffic already. To drive west on Balboa Avenue, from Genesee Ave, to Clairemont Drive at rush hour sometimes takes up to 3 light changes to get through NOW. Balboa is a two lane street, and the stress on it from a multitude of additional automobiles would be horrific.

SUGGESTION: Why not consider the property for HOUSING FOR SENIORS or Memory Care. There are medical facilities right there which would HELP ease the life of the residents. So, PLEASE DON'T Change the current zoning, or at least, don't make the designation Ministerial.

Subject: Crime Lab Project in Clairemont

Hello -

I'm Rob Thompson and a Clairemont resident and am opposed to the Crime Lab site on Balboa and Genesee.

Traffic on Genesee and Balboa is already very bad. The neighbors have filed many complains with Chris Cate and the police regarding the increasingly worse situation of red light runners and the increase of homeless and drug users in the Vons shopping center.

Placing more individuals in this small area when there already is a planned shelter less than 150 yards away on the other side of Vons is absurd.

I care less about the environmental report and more that this project is halted immediately based on the safety of those who already inhabit this area with a high population density.

Subject: your Clairemont problem...

Good morning Marc,

As the subject line states, you really do have a problem on your plate.

Is there a need for lower income housing? Yes.
Is the proposed site (old Crime Lab) the right location? No.

Besides the reasons of building height, no local community input, parking fiasco, and a long list of other negative aspects...how about the most obvious fact.
The proposed location is nowhere close to other city/county institutions of support and services for the proposed residents. Where are all of these? Downtown.
Because the proposed location is vacant and available, does not make it the right choice for the proposed re-purpose.

Seems obvious to me.

Local resident, business owner, and tax payer.

Subject: Mt Etna Project

To whom it may concern,

As a resident of Clairemont, I am opposed to the vision of this property described in the RFP. We have gathered 388 signatures of residents who oppose this project.

<https://www.change.org/p/residents-of-clairemont-clairemont-residents-say-no-to-the-clairemont-community-plan-amendment-rezone-project>

We DO NOT want the following:

1. Increased Density
2. 100% low to extremely low income residents
3. Any Rezoning
- 4 Increased traffic and burden placed on our schools due to over crowding
5. 100% residential space
6. Any change in the Height regulations

The only people this is good for are the developers who will receive tax credits and density bonuses. The developers are not giving anything positive to the community. The residents were clearly ***not*** taken into consideration. Shame on the county- they identified 11 locations and rather than each area doing their part, they are adding ANOTHER low to extremely low income housing project in an area that currently has 364 units dedicated to low and extremely low & homeless housing. How about finding another location so everyone does their part, not just Clairemont.

Subject: Mt. Etna Project

Imagine that you have lived in your home for 30 years. You love your house. You bought in the community because it had a "neighborhood" feel to it. The shopping is so convenient and close. Your neighbors are a family with young children who recently bought the house next door because they chose to live in the community for the same reasons you did.

Imagine that one day the government and some developers tell you that they are going to take away your neighborhood, that in your backyard, on a small parcel of land, will be a large barracks of a building (a "project") that will house hundreds of people who have had lots of trouble in their lives. Many of these people will have substance abuse problems and severe mental health issues that require treatment.

Imagine that the government will not be forthcoming about this, that it will try to shut you out and ramrod a change in the zoning to allow for this building and future high-density, multi-story buildings to be built on small parcels in your community. Eventually you learn that there are no plans to update the infrastructure to accommodate the housing, no plans to mitigate traffic and parking issues, no plans to deal with overcrowding at the two elementary schools that are very close by, no plans to ensure the safety of the children walking to school, no consideration given to the impact on property values and the character of the neighborhood.....

The media coverage is bare-bones, saying that the people of the community oppose affordable housing. The implication is what a bunch of jerks you are for not welcoming the project. The community is told that it needs to "step up and get with the program." You try to point out to anyone who will listen that you are not opposed to doing your share but, you say, my community has already done its part! There is already lots of low-income housing in Clairemont, and a new affordable project for seniors will be built nearby. You wonder, why isn't every community in the county, LaJolla to LaMesa to Sorrento Valley being required to step up and do their part?

The government cannot say how this project will benefit your community in any way. You say, well, if this project is inevitable, the density must be lowered drastically. As it stands, this is way too many people crammed on a 4.09 acre parcel that is zoned for a hundred or so residents, not 1,000 residents. Ameliorate the density and traffic and safety and school issues, put a community center and a public green space, perhaps a retail space in the plans. Make this a part of our community that we can be proud of. Make it right, you think, and the community will support it.

To: Cass, Marc
Subject: R. Rolla / Mt Etna Project / Public Comment
Attachments: Mt Etna_Traffic.pdf

Mr. Cass,

My name is Ryan Rolla, I am a member of the Clairemont Community Planning Group and have family that has lived on Mt. Etna Drive since ±1962.

This is my personal public response about the proposed development at the former SD County Crime Lab located at 5255 Mt Etna Drive.

Based on reviewing the February 2018 " COUNTY OF SAN DIEGO AFFORDABLE HOUSING PHASE II FEASIBILITY ANALYSIS SAN DIEGO, CALIFORNIA - FINAL"

https://www.sandiegocounty.gov/content/dam/sdc/dgs/Doc/RES_DO_CrimeLabFamCtAFHAppA6.pdf

I agree with the "CRIME LAB FINDINGS AND RECOMMENDATIONS" (Page 44) :

*" Also displayed in Table 1-1 and Appendix A, four hypothetical prototypes were tested for the Crime Lab site. **The three rental prototypes include a total of 116 units, which is the maximum number or residential units allowed under current base zoning, even with an exception.** The three rental prototypes include a ground floor retail component that would be neighborhood serving, while the fourth prototype is 100 percent for-sale market-rate community."*

The recommendation that was prepared for the site for the County, recommends no more that 116 units, which is inline with the Clairemont Community Plan.

The current proposal that the Developer "Chelsa" has presented is 450+ units, requiring Zoning and Community Plan amendments.

How a developer could offer a RFQ Proposal, ignoring the recommendations of the County's own feasibility analysis is irresponsible.

The traffic impacts from such a development will only have a direct negative impact on the surrounding neighborhood, that already has a traffic calming measures in place.

Please see the below/attached graphic, clearly showing how the residents enter/exit the neighborhood, specifically coming from closest freeway access points (I-5 and SR-52).

The impacts will be clearly defined in the EIR, mitigators will have to put in place, even if the development was only 116 unit as recommended.

The "TOD Priority" area that is being touted only has two bus lines (41 running N/S, 27 running E/W), of which the 27 does not run with a schedule to support the developers proposed density.

The surrounding community is defined by its canyons, which inhibit ease of access for pedestrians and bicyclists.

This site at 5255 Mt Etna Drive is not suited for the proposed density that the developer has presented. However the site is suited for the 116 units that were recommended within the February 2018 "COUNTY OF SAN DIEGO AFFORDABLE HOUSING PHASE II FEASIBILITY ANALYSIS SAN DIEGO, CALIFORNIA - FINAL"

There are several other sites that much closer to the new MCTC Trolley project, perhaps the proposed density can be made up at those sites that are within walking distance to the the new trolley stops.

- !Ã SD City Rose Canyon Operations Yard adjacent to the new Balboa Trolley Stop
 - oÃ Move to the Operations Yard to Fiesta Island
- !Ã Toys 'r us / Jeromes site adjacent to the new Tecolote Trolley Stop
- !Ã "OTL overflow parking lot"
- !Ã Open Space bordered by Sea World Dr, Friars, PCH and I-5

Thank you for reviewing my comments, i look forward to a direct response.

Dear Sir,

I own a home on 4765 Mount Durban which my son lives in. I am opposing the building for the affordable housing that is being proposed in that area. I am most concerned about the parking issue and safety of the neighborhood. Crime is getting higher in the area and now with the housing proposal, I know it will be worse.

Please help us keep our neighborhood safe and crime free.

Subject: comments: housing proposal for Mt. Etna

Hello Marc,

I am writing re. the 400 unit proposal for Mt. Etna Ave. in Clairemont. I am a retired teacher (San Diego City Schools) and have lived on Mt. Castle Ave. for over 25 years. I am not against housing for senior citizens or at-risk populations in Clairemont. We already have both. A friend recently moved into an assisted living home in Clairemont. A sober-living home in Clairemont has 24/7 onsite supervision; they manage a tightly run program for residents who are dealing with issues of drug and alcohol abuse. What I am against is 400 units and (conservatively speaking) 800 residents living on 4 acres of land with no green space, on a busy intersection, in a building literally surrounding a parking lot for over 400 vehicles. No one should have to live that, anywhere, in 2018 or 2021.

My elderly neighbor who recently moved into assisted living used to cover the neighborhood with his walker. He'd walk along Mt. Etna and cross Genesee on his way to Home Depot. I told him he shouldn't be doing that, especially at night. He told me he'd learned to navigate 'suicide corners'. I'm grateful he is no longer attempting that crossing. It is an intense, multi-laned intersection. Anyone (especially the elderly or disabled) shopping for groceries, going to Target or wanting to get out of the house, will be at risk. Traffic will only get worse over time....with or without a 400 unit development.

Has the developer or anyone on your board been to our closest green space...Mt. Etna Neighborhood Park? It's about 3-4 actual blocks away from the site. However, the blocks are long along that stretch of Mt. Etna...it's equivalent to 5-6 traditional blocks. The elderly and disabled will not be able to walk that far and back. The developer's slide showing a green space across the street from the proposed building is fictionalized. It's only a narrow stretch of grass outside several restaurants with trees down the middle. Police regularly pick up individuals who loiter in that area.

How many people will have a view only into someone else's home? How many windows open onto a cement parking lot where hundreds of cars will be starting/entering/exiting all day and all night long? How many residents will be tempted to cross 'suicide corners'? How can folks be expected to live without access to green space for a picnic, a place to kick a ball, grass to walk through? How can this monster warehouse be proposed by a developer, endorsed by the county, supported by senior services, or accepted by a neighborhood community?

Thanks,
Sara Oswald

Subject: Opposition to the Proposed Mt. Etna Project

Dear Marc,

I am writing to express, on the strongest terms possible, my dissatisfaction and opposition with the proposed Mt. Etna project. Clairemont is the ONE neighborhood left in San Diego where a middle class family can afford a single family home. Don't ruin our community.

Sincerely

Sean Kane

Subject: EIR Comments on 5255 Mt Etna Dr Crime Lab CPA and Rezone Project [WT-4224097]

Dear Mr. Cass,

My wife and I, along with our four-year-old son, reside on Mt. Etna Dr and appreciate the opportunity to offer our input for the EIR. Our comments are divided into the recommended categories: significant environmental issues, mitigation measures and project alternatives. References are numbered in brackets and listed in the last section. Again, thank you for the opportunity to contribute to the EIR. We appreciate the work you and your team are doing.

Sincerely,

Shawn and Michelle Meade

SIGNIFICANT ENVIRONMENTAL ISSUES

Population/Housing: We believe 404 units over 4 acres is too high for the area and should be the principle issue investigated in the EIR. Even a developer thought the RFP's density range, at 300-400 units was "more intense than what appears to be fit for the site" [1].

Hazards and Hazardous Materials: What are the implications of having a 200+ PSI, large diameter, gas transfer pipeline immediately adjacent to a very high density residential building [2]? A similar type of pipeline blew up in San Bruno killing 8 people and destroyed part of a low-density neighborhood [3,4]. Evacuation of a very high density residential building, especially one housing a large amount of old and disabled people, could be difficult, possibly putting the lives of the residents and first responders at risk. Is there currently precedent for such a building immediately adjacent to a gas transfer pipeline (dark blue on SDG&E map)? What is the opinion of SDG&E as well as other local, state and federal agencies on this issue?

Traffic: Mt Etna Dr already has very high levels of traffic at high speeds and appears to be a short-cut between Genesee Ave and Balboa Ave. Effects of the shopping center at the terminus of Mt Etna Dr also need to be considered. Therefore, traffic studies should take data at multiple points all along Mt Etna Dr as well as other streets to properly characterize the cumulative impact of the development on traffic.

Parking: Will there be enough on-site/off-street parking for all the residence, guests and support staff? Resultant on-street parking will flood the neighborhood.

Public Services: The enormous increase in population, in such a small area, will put stress on schools, police and fire services. Will there be enough first responders to handle the evacuation of the proposed building in addition to assisting the existing population in a large-scale event like an earthquake?

Aesthetics: 404 units on 4 acres would be grossly monolithic in comparison to other residential structures. Some of our neighbors will be deprived of sunlight.

Greenhouse Gas Emissions and Air Quality: Auto and air traffic emissions already overburden our neighborhood. Specifically, AVGAS used by small aircraft, such as those from Montgomery Field, contains lead [5]. The development's cumulative impact should include these factors.

Noise: A very high residential density building will generate noise in both construction and operation. For example, the project's residents who park their cars in the neighborhood all night will not hear their car alarms and with therefore not turn them off.

Recreation: Will there be enough recreational space? Future tenants, especially children, deserve recreational space.

MITIGATION MEASURES

Population: Reduce the population density of the development to levels in line with the current city-community plan, therefore not requiring an amendment or circumventing CEQA. This is the primary mitigation measure. All other mitigation measures listed below are secondary.

Hazards and Hazardous Materials: Reduce the full-time residential population density of the proposed development to levels considered good practice, or required, near a natural gas transfer pipeline.

Public services: More police, fire and school services will be needed. Is this in the project budget?

Traffic: First, add a stop sign at intersection of Mt Etna Dr and Mt Davis Ave. Second, add speed bumps all along Mt Etna Dr, Mt Everest, Mt. Herbert and the other short-cut streets. Third, allow for additional access to the development from Genesee Ave and Balboa Ave through the SDG&E easement. Fourth, do not allow a left-hand turn out of the proposed complex onto Mt Etna Dr. Finally, Mt Etna Dr should not be the only access point.

Parking: Lease additional SDG&E property on south side of Balboa Ave; connect with pedestrian bridge.

Recreation: The proposed lease of SDG&E property south of Balboa Ave, connected by a pedestrian bridge, could also be used for a recreational park.

Noise: Put elderly designated apartments on the side of the building that faces the neighborhood – less talking and noise late at night.

PROJECT ALTERNATIVES

A new library with park space is our first suggestion for an alternative project on the Mt Etna site. If housing is possible, given the pipeline safety concerns, then we propose a lower density development, in line with current density limits of the city-community plan, including affordable and market rate housing, more retail, more on-site parking and more green space. Equally distribute remainder residential units and services across all 11 county properties, including the newly proposed MTS properties. Additional parking and green space could also allow for community events such as farmers markets and craft fairs, possibly providing entrepreneurial opportunities for future tenants as well. These improvements could bring in more revenue for the county, city and developer as well as create a flagship property - a model for future affordable housing developments in San Diego and beyond. Let's build something great that uplifts the entire community; uniting it, not dividing it.

Subject: Clairemont rezoning

Mr. Cass,

This is documentation of my disagreement to the Mt. Etna project. That area off of Balboa is already low on parking, and this project will create more traffic as a result. My fear is that it will also reduce property values as a result.

In addition, I would like a response in regards to the vetting process for tenants for the affordable housing. There better not be anyone on the sex offender registry. We already have too much of that in Clairemont.

Thank you,

Shayne McCool

October 17, 2018

To Whom this may concern;

My name is Shirley Kay Van Ess and I live at 4972 Mt Casas Dr. San Diego, Ca. 92117 my phone # is 858-279-4494

My concerns are these plans need to be changed with no more than 200 units and should have 2 exits and entrances. One is not enough. Also all the elementary children will go to Holms elementary school and they will have to cross a very busy street Balboa Avenue. Also it is approx. 1 mile.

you are asking for big trouble if you are going to put families in there with homeless, seriously mentally ill, and substance abuse problems people. What are you thinking?? You evidently don't care! I know something needs to be done to help people but that many in one little area.

What about filling up a canyon and building there. Or where the old stadium is? I have lived in this area for almost 50 years and I hate to see what you are trying to do. Please rethink it.

Sincerely;

Shirley Kay Van Ess

Subject: Strong Concern regarding Mt. Etna Project

Dear Mr. Cass and Mr. Cate,

I am writing to you to express my strong concern regarding the Mt. Etna Project. I believe this location is not fit for this particular project.

I am a periodontist located directly across from the proposed site (4320 Genesee Ave; in the Liberty Medical Dental Building off Mt. Etna). My office window looks directly at the proposed site. The type of housing that is being provided, specifically the 400+ additional units and especially the 52 units dedicated to those with a history of drug use or mental illness will inevitably bring down the value of the neighborhood and create a drug haven in the area. Crime, which is already on the rise, will increase even more. I can personally attest to being approached by a police officer as I was leaving my building late at night asking if I had seen a particular individual they believed to be hiding out in the area. At the same time, helicopters were circling above. This was truly a frightening experience. According to Trulia.com and CrimeReports.com, there have been at least 38 reported incidents of various crimes ranging from petty theft to battery with serious bodily injury at the corner of Balboa and Genesee in the last month! In addition, there were 11 reported crimes at the corner of Balboa and Mt. Everett and 4 at the corner of Genesee and Mt. Etna. Again, it is only going to increase with this building.

By putting "the projects" across the street, small businesses like mine will suffer immensely. I am outraged that this location was selected over other locations which were more suitable (specifically the corner of Camino Ruiz and Mira Mesa). Frankly, if this project is built, I have no choice but to move my practice (which has been here for 30+ years) to another location. The value of my business, as well as many others will plummet. As a result, I believe other businesses will also relocate as the clientele that we currently serve will change.

Clairemont is currently the home to many who have resided here for decades. It is also an up-and-coming neighborhood with many new younger families like mine moving into the area. The current medium value of homes in Clairemont is currently listed between \$500k-600K. The expectation that a family who can afford a home in that price range would reside next to a complex that houses former/current drug addicts and individuals who are mentally unstable is absurd. I would never put my family at risk. This location is too close to many small businesses, homes and a school right down the street!

Clairemont also has many beautiful canyons and trails. It is only logical to think that these current/former drug addicts will use our beautiful parks for their "recreational" activities, again, making the area unsafe for families.

Furthermore, building additional units in this location will bring unwanted and excessive congestion to the area. The current plan to build a 5-story building is also against current city code. I find it unfair that city officials did not approach the community with this important decision. I believe that these individuals should have a place to live, more importantly that those with mental illness and addiction problems should get help! This building does NOT solve the underlying problem, but merely puts a band-aid on the situation and burdening the residents of Clairemont.

I request that this project NOT be built! Please feel free to contact me via email or at the office (858) 541-7676.

Thank you for taking the time to read this,
Shivali Gohel DMD, MSD

Subject: Comments on the Notice and Preparation Document "Clairemont Mesa Community Plan Amendment and Rezone Project WT-4224097"

1. The proposed development is too large for the site and neighborhood. The corner of Mt Etna and Genesee is highly congested due to the surrounding shopping centers and the fact that Genesee is a thoroughfare connecting 163 and University City. Adding the proposed number of units will greatly impact the area in a negative way.
2. The mount streets have been used as a shortcut from Balboa to Genesee for decades. An influx of residents and cars will result in more traffic using Mt Everest and Mt Castle as shortcuts. My children attend Mt Everest Academy and the speeding traffic along Mt Everest and Mt Etna is already a problem at both school start and end times.
3. The limited amount of parking being proposed at this site for the number of units will result in cars parking all over the neighborhood.
4. The proposed low income tenancy of at least 50% is too high. The Stratton is already a low income complex in the neighborhood and an additional homeless project is being built on Mt Alifan. This is creating a low income hub in the center of Clairemont. Other neighborhoods and zip codes need to absorb some of the low rent units. Who will spend the market rate (expensive) on a brand new rental unit when over half the other residents will be on Section 8, disability etc?
5. The height limit needs to be maintained in the neighborhood. Clairemont is not Hillcrest or North Park or even University City. We are not a high rise community.

Subject: Mt. Etna & Genesee Apartment Project

Good morning,

As a 20 year resident on Mt. Casas Drive in Clairemont I have tremendous concerns about the project being considered for the former Clairemont Hospital site. Specifically I am opposed to the density intended for these apartments, as well as the immediate adjacency to a long standing single family home community. The probability of increased traffic, crime by residents with no vested interest in the community and decreased property values for all is 100%.

I actually grew up on the "mount streets", as my parents moved here in 1958. We see an ebb and flow of older original owners, renters and new families moving in, creating a new vibrancy. The addition of low income housing on the immediate outskirts will jeopardize this continual rebirth.

Please note my vehement objection to this project. Our quality of life rests in the hands of politicians making the right decision on this project.

Respectfully,
Steven L. Hanger

Rezoning from 30' to 60' is completely out of character with the neighborhood.

The environmental report lists schools close by that "normal" neighborhood children have no access to.

Parking, Parking, Parking - How do you guarantee those residents will not flood the neighborhood streets with cars?

Subject: Environmental Impact Report for the 5255 Mount Etna Project

Dear Mr. Cass,

I live on Mt. Etna. Please study how this proposed project would directly affect the residents of this street. My biggest concern is traffic. I already have a hard time getting in and out of my driveway during the morning and afternoon rush times. We have three schools located on our street with no bus service, so all the kids are being driven in.

Traffic in the surrounding neighborhoods - regarding our children's safety - and on the main thoroughfares, such as Genesee and Balboa, which are already impacted in the rush hour commutes. Genesee already backs up from the 52 in the evenings, so dropping 800 more cars (400 units/2 workers per unit) in the mix will be a NIGHTMARE.

Please study how the bus system will be of use to the residents. It got a poor rating from the feasibility study.

Please let us know where the children will go to school. This will most certainly bring more cars and traffic to our roads.

The three schools on Mt. Etna are:

Mt. Everest Academy. This is a home school/independent study school. Most children, especially low income, have two working parents. Obviously we'll assume there are not parents home to teach them.

The second school is Tsumiki preschool. This is a private preschool that speaks only Japanese. This is a great option for those who speak Japanese.

The third school is John Muir. John Muir is a magnet/choice school. My children applied for the choice program and did not get in to the school. We live about 10 houses away. This is not a neighborhood school and therefore can not be considered a real possibility for the majority of the kids.

The actual neighborhood school is Holmes Elementary, which was running at 100% capacity this year. There is no more room and thus the new project would need to find another "neighborhood school". Nothing in walking distance for the younger ones, thus more cars on the road.

The middle and high schools are also not walkable as Balboa Ave has no sidewalk on the route to Marston Middle and Clairemont High. - Thus even more cars on the road.

This project would be better suited in a different area that has programs, transportation and space zoned residential - as this piece of land is not zoned residential.

Thank you,
Susan Fanno

Subject: Project Case No.WT-4224097

Dear Mr. Cass,

As a former successful housing coordinator for homeless families under a HUD McKinney grant and a current home owner a half mile from the proposed site at the former SD Crime Lab on Mt. Etna I have some ideas about what might be an advantageous use of this development.

Single mothers with small children are frequently either on the brink of homelessness or living in inappropriate housing situations. Since there is a grammar school less than half a mile from the site, and a shopping center across the way, these families could have working single mothers with children in school without needing transportation.

The other population that could be served are seniors and/or handicapped individuals who also would benefit from convenient shopping centers again without transportation needed as well as senior medical facilities located directly across the street. Should the need for transportation arise there are bus stops on the corner. This serves two at risk populations as well as the community.

My concerns about the proposals I have been hearing and reading about are mixing populations that could have dangerous implications for the people who are being served as well as our community. The Housing First model might work well in an urban environment however this is a quiet neighborhood of families with small children and the elderly. Housing First does not have a screening process which has the potential of putting the untreated severely mentally ill, Veterans with PTSD, as well as people in active addiction with no tox screening living next door to children, sick people or women who have only recently left an abusive environment. In my extensive experience in this field this can have consequences that nobody wants to think about.

Thank you for considering the importance of our community as well as the population who will be served.

Sincerely,

Susan Harris

Subject: Mt Etna project

I live on Mt. Culebra in Clairemont and want to provide my input on the proposed housing project on Mt. Etna. As a Realtor, I understand the housing shortage and need for new development. However, the size of this project is too big for our neighborhood.

I encourage you to drive around the area, specifically on Genesee and Balboa any weekday around 5 p.m. The traffic is already very congested and a large influx of residents would make the situation nearly impossible to get in and out of our neighborhood at rush hour. Also, people use my street as a 'cut-through' to avoid the corner of Balboa and Genesee, many of whom speed through our streets and create extra traffic and dangerous conditions for pedestrians and children. This project would only exacerbate the problem.

Maybe there is a way to have a smaller version of this project that would lessen the impact to those of us already living here. I understand that most people will say 'not in my back yard', but the size of this project will be a true burden on the area residents, so I hope you can identify a better location for this size of development, or downsize the scope of this project and re-propose it to the community.

Thank you -

Subject: Ridiculous Housing Project

Dear Marc,

We purchased our home in Clairemont in 2002, with the hopes of raising our children in a great family oriented community. When my husband and I, who is a police officer & I am ER nurse, hear of housing of this nature being built down the street, we take pause and wonder why Chris Cate & other community leaders would put this poorly planned project in our midst?

Firstly, there is absolutely no infrastructure to support a project of this kind. There is limited access through a residential area, with poor public transportation options.

Secondly, putting mentally disabled and homeless people down the street from three schools??? Are you kidding??? If you want to see holy hell unleash on the city of San Diego, just wait until the first incident involving a 'project resident' and a child from a neighboring school happens, because it's just a matter of time.

Clairemont shoulders it's fair share of section 8 & affordable housing. Lets build this down the street from Chris Cate's house which I hear is no where near Clairemont.

Marc, Lets find a more viable option for low income housing, with better planning to accommodate another 1000 people within a small area, as well as a huge impact on traffic.

If you would like to see Clairemont become the 'Meth Capitol' of the United States like it was in the 1980's, then by all means this is a GREAT idea!! I say we find a better option and keep Clairemont the family community It is.

Sincerely,
Suzanne & Joseph Harper

P.s. Tell Chris Cate, he'll NEVER get another vote from anyone in Clairemont if this poorly devised scheme goes through.

Subject: Mount Etna

Mr. Cass,

I am writing to express my concern over the Mt. Etna project. I live on 4321 Mt. Everest, just a couple blocks away. I am vehemently opposed to this project, particularly how our elected officials tried to ramrod it through without ANY initial discussion with actual members of the community.

Clairemont residents don't want our community to be the guinea pig for a project that was so poorly thought through and is clearly meant to benefit the developers but not the taxpaying citizens who pay the salaries of our representatives.

I've been trying to get lighting on my street, which is across from a school, for two years now--to no avail. Yet now in addition to already feeling unsafe with lack of lighting, there will now be an at risk population living two blocks away who put me at additional risk.

The Balboa/Genessee area is already overrun with traffic, so I'm not sure what genius decided it would be a good idea to add another 1000 residents to that area, particularly with no parking.

I am a native of Clairemont and have watched this community develop for the better over the years. I purchased my own home 15 years ago and for this project to put my property value at risk is unfair and unethical.

Clairemont should not be the dumping ground of this city. We are the largest neighborhood in the county and many of us chose Clairemont because of it's affordable proximity in comparison to other neighborhoods. We have a voice and it should be heard. Our collective voice says WE DON'T WANT THIS PROJECT!!!!

Please hear us.

Regards,
Tanja Kropf

Do Affordable Housing Projects Harm Suburban Communities? Crime, Property Values, and Taxes in Mount Laurel, NJ

Len Albright,

Northeastern University

Elizabeth S. Derickson, and

Princeton University

Douglas S. Massey*

Princeton University

Abstract

This paper offers a mixed-method analysis of the municipal-level consequences of an affordable housing development built in suburban New Jersey. Opponents of affordable housing development often suggest that creating affordable housing will harm surrounding communities. Feared consequences include increases in crime, declining property values, and rising taxes. To evaluate these claims, the paper uses the case of Mt. Laurel, NJ – the site of a landmark affordable housing legal case and subsequent affordable housing development. Employing a multiple time series group control design, we compare crime rates, property values, and property taxes in Mt. Laurel to outcomes in similar nearby municipalities that do not contain comparable affordable housing developments. We find that the opening of the affordable housing development was *not* associated with trends in crime, property values, or taxes, and discuss management practices and design features that may have mitigated potential negative externalities.

Keywords

suburbs; affordable housing; mixed methods; low income housing tax credit

After one year of operation, the Ethel Lawrence Homes in Mount Laurel, N.J. were proclaimed in November 2001 as “The Affordable Housing Complex That Works” (Capuzzo, 2001). This proclamation of success followed decades of opposition to the project’s construction. At planning board meetings, community members repeatedly expressed concerns about increasing crime rates, falling property values, and rising tax burdens that were expected to follow from its opening (Haar, 1996; Kirp, Dwyer, and Rosenthal, 1997). The project grew out of two New Jersey Supreme Court decisions that together established “the Mount Laurel Doctrine,” stating that municipalities throughout the state had an “affirmative obligation” to provide for their “fair share” of the regional need for

affordable housing. Mount Laurel thus constitutes a landmark in the inclusionary zoning movement and a touchstone for affordable housing advocates everywhere.

Akin to residential mobility programs such as Chicago's Gautreaux Program, the federal government's Moving to Opportunity Program, and inclusionary zoning efforts such as the Massachusetts 40b Program, California's Housing Element law, and the Moderately Priced Dwelling Unit Program of Montgomery County, Maryland, the Mount Laurel doctrine has led to the movement of low-income black and Latino households into white middle class suburbs (see Rubinowitz and Rosenbaum, 2000; Briggs et al., 2010; Goetz and Chapple, 2010). Here we examine this high-profile case to determine whether the fears articulated by Mount Laurel residents about the project were indeed realized.

We situate our analysis in the broader literature on the effects of subsidized housing on surrounding communities and draw upon publicly available data to undertake a multiple time series control group quasi-experiment to assess the effect of the opening of Ethel Lawrence Homes (ELH) on local crime rates, home values, and property taxes. Finding no detrimental effects, we draw on qualitative interviews with residents and officials to reveal the social processes and management practices that produced the benign outcomes we observe. We conclude that careful property management, aesthetic consistency with local architecture, spatial congruency with surrounding neighborhoods, and the cultivation of high levels of formal and informal social control were important in mitigating potential negative externalities.

In the course of this analysis, we make three contributions to the broader literature on affordable housing. First, we focus on *suburban* affordable housing development. Save for a small number of studies (Funderburg and MacDonald, 2010; Deng, 2011a, 2011b) little research has assessed subsidized housing in suburban areas. Second, we employ quantitative and qualitative methods in complementary fashion within the same analysis. Prior research on affordable housing has generally utilized either quantitative methods (e.g. Bauman, 1987; Goldstein and Yancey, 1986; Bickford and Massey, 1991; Massey and Kanaiaupuni, 1993; Deng 2011a, 2011b) or qualitative analysis (Rainwater, 1970; Hirsch, 1983; Venkatesh, 2000); but rarely have both been combined in the same study. Heeding the call in reviews by Nguyen (2005) and Freeman and Botein (2002), we employ quantitative methods to study the influence of affordable housing on communities and qualitative methods to understand how affordable housing project personnel acted to manage potential threats to social disorder.

Finally, in assessing effects of ELH on the surrounding municipality we focus on multiple outcomes – crime, property values, and property taxes – the three issues that were most often mentioned as concerns by Mount Laurel residents. Past studies of subsidized housing have focused either on property values (see Nguyen, 2005 for a review) or crime (Griffiths and Tita, 2009) but not both simultaneously. We are unaware of any studies that have examined the effects of subsidized housing development on property tax burdens. By considering all three outcomes, as well as the underlying social processes that govern the behavior of project residents, we offer a more comprehensive understanding of how

affordable housing developments affect suburban communities and the actions that one may undertake to promote their successful integration.

AFFORDABLE HOUSING AND SOCIAL DISORGANIZATION

The development of affordable housing in suburban areas invariably entails increasing the ethnic heterogeneity, residential mobility, and class diversity of suburban communities. In response to these developments, social theory predicts--and suburban neighbors clearly expect--increases in social disorganization that will, in turn, lead to increased rates of crime and declining property values (Shaw and McKay, 1969; Sampson, 1993; Sampson and Wilson, 1995). Of course, the tacit assumption that poor neighborhoods promote social disorganization has been strongly contested (Suttles, 1969; Small, 2004).

Prevailing theories about the relationship between affordable housing and crime focus on the characteristics of either people or places. "Place" theories link aspects of affordable housing *design* to levels of social disorganization. The design hypothesis asserts that the built environment of subsidized housing provides greater opportunities to commit crimes, thus explaining higher rates of violent crime in subsidized housing compared to non-subsidized housing (Griffiths and Tita, 2009). "People" theories link the *allocation* of poor people to confined spaces to the social production of disorganization. Wilson's (1987) social isolation hypothesis argues, for example, that concentrated poverty produces social disorganization by isolating poor residents from "mainstream" society, concentrating crime-prone people spatially to produce a social environment that perpetuates criminality (Weatherburn et al., 1999).

Subsidized Housing and Crime

A number of studies have examined the relationship between affordable housing and crime. As already noted, however, all have analyzed crime patterns in *central cities*, where affordable housing has traditionally been concentrated (Holloway and McNulty, 2003). To date most studies have focused on violent crime rather than non-violent crime, and all have employed quantitative methods. In their study of crime and affordable housing in Sydney, Australia, for example, Weatherburn, Lind, and Ku (1999) used regression methods to test people and place theories. The authors employ multiple regression models to predict crime participation rates from affordable housing measures (quantity and building-type), while controlling for a variety of social and demographic characteristics. They found that variation in neighborhood crime is largely explained by the characteristics of housing residents, rather than the design of the housing itself. They concluded that the social isolation hypothesis was more promising as an explanation for higher crime rates than the design hypothesis.

Examining homicide trends in southeast Los Angeles from 1980 to 1999, Griffiths and Tita (2009) estimated logistic regression models to predict murders. They concluded that both people and place theories hold true to some extent. The design of public housing projects by definition spatially concentrates poor, crime-prone people to drive up local homicide rates. As a result, murder rates in public housing projects were much higher than expected, in keeping with the social isolation hypothesis. The authors also found, however, that homicide was largely self-contained within the projects themselves. Thus the housing projects served

neither as a magnet for non-local offenders nor a generator of violence in surrounding neighborhoods.

The foregoing studies generally lend more support to the social isolation hypothesis than the design hypothesis. However, neither study assessed the effects of *introducing* subsidized housing on neighborhood crime rates. Given their cross-sectional design, a plausible alternative hypothesis is that crime rates were high in those areas to begin with, and that projects were built there precisely because they were socially disorganized, so that the construction of the projects themselves had no net effect on crime rates. In order to eliminate this alternative explanation, one must analyze the crime patterns before and after the introduction of subsidized housing into a community – as two recent studies have done.

Assessing crime trends in Louisville, Kentucky, Suresh and Vito (2007) found that increases in neighborhood crime were associated with changes in the location and concentration of affordable housing. Based on geographic clustering of crime reports to police, the authors conclude that crime hotspots emerged in two specific areas after the revitalization of low-income housing projects. The authors argue that both the characteristics of places and people determined spatial crime patterns. Supporting the place theory, higher density housing projects were associated with higher rates of aggravated assault than lower density projects. Supporting the people theory, individual criminal careers emerged within the niches of concentrated poverty the projects created. Using econometric models to test for discontinuities in crime trends before and after the opening of subsidized housing sites, Santiago, Galster and Pettit (2003) examined crime rates before and after the development of scattered site affordable housing in Denver, Colorado. They found that proximity to assisted housing was not associated with increases in crime. Their study does not utilize comparison neighborhoods or towns, instead comparing the crime trends near subsidized housing to city-wide trends.

As implied by the foregoing studies, both the general public and academic researchers have worried about the “spread effects” of low-income housing on surrounding neighborhoods. Spread effects, of course, are shaped by the size and density of housing projects and their spatial relationship to surrounding neighborhoods. Although Griffiths and Tita (2009) found little evidence of spread effects in Los Angeles, in Atlanta McNulty and Holloway (2000) found that the magnitude of association between racial composition and crime decreased with increasing distance of neighborhoods from housing projects. They used crime data provided by the Atlanta Police that permitted geo-coding of crime incidents by census block-groups. While their analysis speaks to the relationship between crime and distance from subsidized urban housing, it does not address the impact of the *introduction* of subsidized housing – the heart of contention in the Mount Laurel case.

The relationship between subsidized housing policy and crime is the subject of extensive speculation and contentious debate across academic and non-academic arenas. For example, in a controversial *Atlantic Monthly* article, Rosin (2008) suggested a direct causal link between subsidized housing policy changes and the dramatic increase in violent crime in inner-ring suburbs. Many social scientists disputed the Rosin article’s argument that the

relocation of public housing residents resulted in more violent crime. Briggs and Dreier (2008) offer a particularly thorough critique of the Rosin analysis.

Subsidized Housing and Property Values

Even more than crime, the relationship between affordable housing and property values has been a subject of concentrated inquiry, with more than seventeen studies conducted since 1963 (Nguyen 2005). Studies have looked at the effect of a variety of types of subsidized housing programs on property values (low-income housing, elderly projects, special needs housing, Section 8 certificates, low income housing tax credit (LIHTC) developments, and Community Development Corporation (CDC) projects). As with the literature on affordable housing and crime, most studies have focused on urban areas, such as Denver (Santiago et al., 2001), Madison and Milwaukee (Green, Malpezzi, and Seah, 2002), Memphis (Babb et al., 1984), Minneapolis (Goetz et al., 1996), Philadelphia (Lee et al., 1999), Portland (Rabiega et al., 1984), and Yonkers (Briggs et al., 1999). However, there is a scant but potent research program evaluating the impact of affordable housing in the suburbs.

Deng (2011a) utilizes cluster analysis to assess the impact of LIHTC developments across Miami-Dade County in Florida. Deng generates clusters based on demographic, social, and housing variables, and finds the class and racial composition of neighborhoods to be primary factors associated with the varying effects of LIHTC developments. The study finds that black high-poverty neighborhoods enjoyed the most positive changes from LIHTC investment, while 63% of the LIHTC developments that had the most severe negative impacts were located in majority white middle-class suburbs. In addition to race and class, Deng points to a variety of possible intervening factors: density between LIHTC developments, municipal incorporation, and changes in political boundaries. Deng's (2011b) study of the impact of LIHTC development in Santa Clara County, California (Silicon Valley) includes 30 LIHTC developments in the suburbs. Twenty-five of the 78 developments analyzed are in majority white middle class neighborhoods. Deng generally finds *positive* impacts on property values of surrounding neighborhoods, and finds no difference in impact based on whether the developer is for-profit or non-profit.

Funderburg and MacDonald's 2010 study of LIHTC developments in Polk County, Iowa, which includes portions of suburban Des Moines, finds that clustered LIHTC housing developments were associated with a 2–4% slowing of property value appreciation among nearby single family homes that were matched with comparable homes elsewhere in the same county; but they also found that this effect was negligible when the housing was high quality and mixed-income. In a study of seven 40b projects in Massachusetts between 1982 and 2003, Pollakowski et al. (2005) utilize hedonic price modeling and find no evidence of a decrease in property values due to location of single family homes in the impact areas of subsidized housing. However, their study does not offer qualitative inference into how potential negative externalities have been mitigated.

Our analysis of a LIHTC development in a suburban, majority-white, middle class neighborhood deepens the foregoing research by investigating municipal level outcomes. This is necessary because the municipal and school district geographies are congruent, and perceived changes in school quality can affect all property values within the municipality.

Furthermore, through our qualitative analysis, we explore how social structure and place managers (Eck 1994) within suburban LIHTC developments, which to date have not received adequate attention, can impact outcomes.

One factor that has been studied is the demographic composition of the housing project relative to the receiving community. Briggs et al. (1999) found that despite substantial racial and socio-economic differences between subsidized housing residents and neighboring residents, no change in property values occurred in Yonkers. Another key factor appears to be the trend in property values *before* the introduction of the project. Galster et al. (1999) found that neighborhoods with decreasing property values were more likely to evince a significant negative effect of affordable housing compared with neighborhoods that had appreciating property values. Moreover, areas with appreciating home values were likely to continue appreciating even after the construction and opening of affordable housing.

An additional factor is the character of the project itself, and hedonic regression models have revealed that the influence of subsidized housing on property values tends to be minimized when the development is of high quality (Lyons and Loveridge, 1993), is well-managed (Goetz et al., 1996), and is aesthetically attractive and consistent with the surrounding housing stock (Cummings and Landis, 1993). The effects of subsidized housing on surrounding property values also dissipate with distance, falling quite rapidly as distance increases (Guy, Hysom, and Ruth, 1985; Schwartz et al. 2006). Studies of the effect of project density on home prices have yielded mixed results, with Lyons and Loveridge (1993) finding that tightly clustered scattered site units had stronger negative effects on property values than dispersed scattered site units, but Lee et al. (1999) finding little effect on property values even of large-scale public housing projects.

Subsidized Housing and Property Taxes

As mentioned earlier, we know of no studies that investigate the consequences of low-income housing development on suburban property tax burdens. However, the logic behind communities' anticipation of higher tax burdens is straightforward: either tax revenues will fall as property values decline, thereby requiring a tax increase to maintain services, or low-income, high-need subsidized housing residents will consume higher levels of public resources than existing community members, necessitating property tax increases in the municipality. Public resources could include special educational support in schools, public transportation services, or myriad other municipally-provided goods. However, it is important to note that the development of subsidized housing can be accompanied by plans for Payment in Lieu of Taxes (PILOT). PILOTs are payments made to municipal governments to offset property tax revenue losses related to the use of the property. In the case of ELH, PILOTs were an integral part of the planning and execution of the homes.

RESEARCH DESIGN

Our analysis is drawn from a case study is a 140-unit affordable housing complex known as the Ethel Lawrence Homes (ELH). Previous research has shown that proposals for affordable housing construction typically encounter strong resistance from potential neighbors (Briggs et al., 1997; Galster et al., 2003; Goetz 2003; Hogan 1996) and Mount

Laurel was no exception. Opposition to the proposed development in 1997 was fierce. Twice vandals destroyed the sign advertising the site of the proposed housing (Bell, 1997). Public hearings were raucous and vitriolic, and the controversy garnered considerable attention in local and national media (Smothers, 1997; Capuzzo, 2001; Getlin, 2004), thus demonstrating the disruptive potential inherent even in a relatively small housing complex in a municipality of 40,000 people (NJ Division of State Police, 2000). In addition to crime, taxes, and property values, residents had concerns about increases in traffic and environmental impacts (DeGenova et al., 2009; Briggs, 1997; Goetz, 2003; Hogan, 1996) but we do not address these issues in this study.

ELH is located adjacent to a neighborhood of luxury, market-rate, single family homes and an age-restricted retirement community. It was opened in two phases – with 100 initial units in late 2000 and 40 other units early in 2004. The project consists of one-, two-, and three-bedroom two-story townhouses that are 100% affordable to lower income households, defined as those with incomes under 80% of the regional median income, who pay no more than 30% of their incomes for rent and utilities. The project is unusual in that it is open to families with a wide range of annual incomes. In order to qualify for residency in ELH, a family's annual income had to lie between 10% and 80% of the regional median income, yielding a range of \$7,000 to \$56,000 for a family of three in 2010. Although all units are affordable and all residents earn below-average incomes, therefore, the project does not concentrate poverty to the same extent as the typical central city family housing project. It nevertheless contains much poorer families than other housing projects developed with tax equity credits in New Jersey, which typically only include families earning 50% to 69% of the regional median income, a range of \$35,000 to \$42,000 for a three-person family in 2010.

ELH was financed and built for approximately \$26.7 million, or \$190,459 per unit for 140 townhouses (Ethel R. Lawrence Associates, L.P., 2009; Ethel Lawrence Associates Two, L.P., 2009). Around half of the funds (49%) came from the federal Low Income Housing Tax Credits program, which was established to encourage private investment in low-income rental housing. Thirty-four percent of the funds came in the form of loans from the State of New Jersey, and the remaining 17% was provided by a variety of private sources (Massey et al., 2013). ELH is owned and managed by Fair Share Housing Development, Inc. – a non-profit entity.

Although the project opened in late 2000, it was not occupied until 2001, thus creating the basis for a time series quasi-experiment (Campbell and Stanley, 1963). If the opening of the ELH project had any effect on crime rates and property values, we would expect to observe a clear discontinuity in time trends before and after 2001, perhaps with an additional disjuncture after the 40% expansion of the development in 2004. If the expressed fears of neighbors were realized, in other words, we would expect to see a drop in the rate of appreciation if property values had been rising before 2001, an increase in the rate of decline if they had been falling before 2001, or a clear turn downward if they had been flat until that date.

Any of these outcomes after 2001 would be consistent with the hypothesis that the advent of the project depressed local property values, but of course it would not prove it. Some other historical event might have operated simultaneously to shift property values from their pre-2001 trend, such as a recession, a region-wide housing bust, or a shift in state home lending regulations. The internal validity of the time series quasi-experiment is greatly enhanced by the addition of control groups – in this case, other, similar townships in the same region that did not experience the sudden opening of a 100% affordable housing project in 2001. If it was the ELH homes that caused the disjuncture in the trend for Mount Laurel, we would expect to see the discontinuity in that township but not in other nearby and otherwise similar townships.

To assess the impact of the ELH opening on the outcomes of interest, we designed a multiple control group time series quasi-experiment and conducted what Galster (2004) calls a difference in differences study. First, we assembled a longitudinal series of outcomes in Mount Laurel Township and comparison townships before and after the opening of ELH. We then undertook a statistical test (a Wald test) to assess whether there was a significant discontinuity in the time trend for each outcome before and after the opening of ELH. Again, the inclusion of comparison townships helps to address the principal threat to the validity of a time series design – what Campbell and Stanley (1963) call “history,” or the coincidence of a policy intervention with another event that could have produced the discontinuity. Thus, if we were to observe a temporal discontinuity in the time series for Mount Laurel but not in other townships, it would strengthen our causal inference that the opening of the affordable housing development affected crime rates, property values, and tax burdens.

We selected a city level analysis because the municipal boundary is highly relevant socially in Mount Laurel and the surrounding region, as it is the primary boundary for school assignments – with one high school serving the entire municipality. All homes in Mount Laurel should thus reflect the capitalized value of the access to this high school, even after controlling for neighborhood level characteristics (see Chiodo et al., 2010). Fear of and resistance to suburban affordable housing developments typically manifests at the municipal level, with residents across the municipality mobilizing to oppose proposed developments because of concern about a reduction in municipal services, including school quality, or an increase in municipal costs. Furthermore, the Mount Laurel doctrine in New Jersey adjudicates regional fair share affordable housing compliance at the municipal level.

Figure 1 presents a map showing the geographic locations and median household incomes for Mount Laurel and three neighboring townships chosen to serve as comparison cases: Cherry Hill, Cinnaminson, and Evesham. As the figure indicates, each of the comparison municipalities lies in close proximity to Mount Laurel and has a similar median income. The figure also depicts the geography of inequality prevalent in Southern New Jersey by showing the high degree of spatially concentrated poverty in and around the City of Camden, just a few miles away from the suburban comparisons.

The degree of similarity between the control cases and Mount Laurel is further substantiated in Table 1, which presents selected social, economic, and demographic characteristics for the

four townships based on the Census of 2000, when the ELH project first opened (U.S. Bureau of the Census, 2009). At that point (and still today), all of the municipalities were predominantly white (ranging from 85% in Cherry Hill to 91% in Cinnaminson), overwhelmingly owner-occupied (ranging from 78% in Evesham to 96% in Cinnaminson), characterized by very low poverty rates (ranging from 2% in Cinnaminson to 4% in Cherry Hill) with similar median incomes (ranging from \$63,800 in Mount Laurel to \$69,400 in Cherry Hill). Although Cinnaminson's population is much smaller than that of the other municipalities (15,000 versus 40,000–70,000), it comprises a much smaller geographic area (see Figure 1).

In addition to their geographic proximity and socioeconomic comparability to Mount Laurel, the comparison townships were chosen for the relative absence of 100% affordable housing developments during the time period under observation. The Council on Affordable Housing (COAH) is the state agency responsible for monitoring municipal affordable housing developments in New Jersey and issues reports on all proposed and completed affordable housing projects in the state. Utilizing COAH reports, we examined the amount, type, and timing of affordable housing developments in each township from 1990–2008 (New Jersey Department of Community Affairs, 2010). Additional potential comparison townships included adjacent Moorestown Township. While Moorestown Township has very similar demographic characteristics to Mount Laurel Township, we ruled it out as a comparison township due to the construction of 148 units across several 100% affordable housing developments during the study period.

Compared with Mount Laurel's addition of 140 units of affordable housing in 2000, there were no such units added in Cherry Hill or Cinnaminson during the study period (1990–2008). In Evesham, one 100%-affordable housing project of only 16 units opened during the study period. However, 100% affordable housing is just one type of subsidized housing – other common types include elderly housing, housing for the disabled, rehabilitated existing housing, and “inclusionary” development of affordable housing units as a portion of a market-rate development project. Table 2 includes the number of subsidized housing units in Mount Laurel and the comparison townships. Although all of the comparison townships developed subsidized housing, Mount Laurel has by far the most and no other townships had a large number of units of 100% affordable housing come on-line in 2001.

Our multiple control group time series quasi-experiment focuses on three primary outcomes: crime rates, property values, and property taxes. Crime data come from the 1990–2009 Uniform Crime Reports for the State of New Jersey. Each year, the New Jersey State Police prepares a tally of crime statistics gathered from state enforcement agencies that are then reported to the Uniform Crime Reporting System (NJ Division of State Police 2009). These data include all crimes categorized by the Federal Bureau of Investigation (FBI) as “index crimes,” including homicide, rape, robbery, aggravated assault, burglary, larceny, theft, and motor vehicle theft.¹ Among these index crimes, homicide, rape, robbery, and aggravated assault are classified as violent whereas burglary, larceny-theft, and motor vehicle theft are

¹Manslaughter, domestic violence and simple assault are not index crimes. Domestic violence is not counted as an index crime, unless it is concomitant with one of the listed index crimes.

designated as non-violent. Each crime is attributed to the municipality in which it was committed rather than the municipality that received the report or responded to the crime.

These crime data are uniformly reported and available across municipalities and over time. However, these official crime data are limited in that they exclude “quality-of-life” crimes like vandalism and disorderly conduct. A further limitation of these data is that they do not indicate the location of crimes (e.g. street address) within each municipality. Accordingly, these data do not permit analysis of the precise distance of crimes from the affordable housing development. A third limitation of reported crime data is that, of course, it only reflects reported crime, omitting unreported crime and including reports that do not result in arrest or prosecution.

Property value and property tax data come from reports prepared by the New Jersey Division of Taxation and are available at the municipal level from 1994 through 2010 (property values—see New Jersey Division of Taxation, 2010a) and from 1997 through 2010 (property taxes—see New Jersey Division of Taxation, 2010b).² Each year, the Division calculates the average residential sales price for each municipality and reports the municipal-level property tax burden (the “general tax rate”), which is a multiplier used to calculate the tax levied on each property. In addition to *township*-level property value data, we used public property records to compile *neighborhood*-level data for two specific areas located immediately adjacent the ELH development, Hillside Lane and Holiday Village, both of which were developed in the early 1990s and predate ELH. Holiday Village is located just across the street from ELH and is an age restricted retirement community comprised of single family homes and condominiums limited to persons 55 years or older. Hillside Lane is a just down the road and is comprised of stand-alone, luxury single-family homes that follow a handful of design models.

We supplement our time series analysis with two sources of qualitative data to identify the reasons Mount Laurel residents opposed the housing project and to examine the internal social processes and management practices within ELH. The qualitative analyses are based on data compiled from archival and historical sources, as well as 102 in-depth interviews. From Mount Laurel Township, we obtained transcripts and audio recordings of the public hearings held in 1997. Newspaper articles covering the controversy were gathered from personal collections as well as local archives, and minutes from ELH Neighborhood Watch meetings from 2006–2010 were obtained from Fair Share Housing.

In addition, we undertook qualitative interviews with 42 inhabitants of ELH and 15 residents of surrounding subdivisions between August 2009 and August 2010. The interviews were semi-structured and focused on daily life. In addition, numerous stakeholders were interviewed using a semi-structured approach, including on-site interviews with five Fair Share Housing staff and interviews with 31 local officials from the township, public schools, and police department.

²Because the New Jersey Division of Taxation only provides effective tax rates for the years 2000 through 2010, we used an estimated effective tax rate for 1997 through 1999.

EFFECTS ON CRIME, PROPERTY VALUES, AND TAXES

Figure 2 compares the trends in crime rates observed from 1990 to 2009 in Mount Laurel, the three comparison townships, and the State of New Jersey as a whole using curves fitted using the method of locally weighted polynomial regression, known as LOESS estimation. LOESS estimation fits simple linear and polynomial models to localized subsets of data to create a representation that describes variation in the data on a point-by-point basis (see Cleveland, 1979; Cleveland and Devlin, 1988). As shown in the resulting curves, all geographic areas experienced a drop in crime over the period.

In the state as a whole, the rate dropped from 54.5 crimes per 1,000 residents in 1990 to around 23.9 crimes per 1,000 nineteen years later. The trend in Cherry Hill closely followed the state trend, moving from crime rates in the 50s in the early 1990s to values in the mid-30s by late 2000s. Crime rates in Mount Laurel, Evesham, and Cinnaminson were much lower than the state average in 1990, so they had less room to fall and the decline was much less dramatic in those townships. Nonetheless crime declined in all three townships from 1990 to 2009. Although the decline was flatter in Mount Laurel, there is no evidence of any discontinuity in its trend in the years subsequent to 2001, when ELH opened, or after 2004 when it expanded by 40%.

In Table 3 we undertake a formal test of temporal discontinuities in Mount Laurel's crime rate relative to trends in the comparison cases by estimating simple OLS regressions of crime rates on year for each township during two separate periods: a pre-ELH period from 1990 to 2000 and a post-ELH period from 2001 to 2009. We also present results separately for violent and non-violent crimes. The resulting slopes indicate the average rate of linear change in each township over the time period under consideration. If the opening of ELH caused an increase in crime, we should observe a significant difference between the 1990–2000 slope and the 2001–2009 slope and this difference should be significantly greater than the corresponding slopes observed in the comparison townships, corresponding to Galster's (2004) "difference in differences" approach.

As the regression results very clearly demonstrate, there is no evidence that the opening of ELH caused an increase in crime within Mount Laurel Township. Indeed, overall crime rates decreased during both periods under consideration. Crime rates fell everywhere before and after the opening of ELH, except in Cherry Hill. Although the rate of decline slowed or reversed in all townships after 2000 (significantly in three cases), in none of the comparisons was the change in crime rates observed during 2001–2009 significantly different from that observed in Mount Laurel.

Examining violent and non-violent crime rates separately, we see that the decline in crime rates observed between 1990–2000 and 2001–2009 is largely attributable to a drop in non-violent criminal activity. Across all four townships there was no statistically significant difference in the rate at which violent crime declined between the two periods. The decline in violent crime in Mount Laurel after 2000 was no different than that observed in Cherry Hill and Cinnaminson. Although there was a significant difference post-2000 compared with Evesham, this difference reflects the fact that we observe no significant decline in violent

crime at all in Evesham, either before or after 2000, whereas Mount Laurel's violent crime rate continued the decline established pre-ELH. The rate of decline in non-violent crimes declined or reversed after 2000 in all townships. This discontinuity was significant in three of the four cases. The exception here is Evesham, whose non-violent crime rate declined more rapidly than the others. But in this case Evesham is the outlier, not Mount Laurel.

Thus, despite the negative expectations of townspeople, we find no evidence that the opening of ELH had any effect on crime rates in Mount Laurel, which were falling before 2001 and continued to fall afterward, just as they did in nearby townships. In Figure 3 we move on to consider the project's potential effects on property values by presenting LOESS curves estimated to show trends in home prices in Mount Laurel and the three comparison townships from 1994 through 2010. After 2000, housing values rose rapidly in all townships, mirroring the explosion in housing prices that occurred nationally over the period. From figures in the range of \$120,000 to \$140,000 in 1994, average home values in the townships rose up to the range of \$245,000 to \$265,000 by 2010. Of the four townships, Mount Laurel tied with Evesham for the lowest average home value in 1994 and its average home value remained below the other three townships throughout the period, going from around \$125,000 in 1994 to \$249,000 in 2010. Over the same period, Evesham went from approximately \$125,000 to around \$250,000, while Cherry Hill rose from \$138,000 to \$261,000 and Cinnaminson grew from \$137,000 to \$255,000.

In other words, the price gap between Mount Laurel and the three comparison townships increased slightly over the period, especially after 2000, as can be seen in Figure 3. In the top panel of Table 4 we undertake a formal statistical test to discern whether the increase in home prices was slower in Mount Laurel than the comparison townships. Using OLS regression we estimated the average linear change in home prices across the four townships during the periods 1994–2000 and 2001–2010. Once again there are no significant differences between Mount Laurel and the three comparison townships, either in the rate of home price increase after 2000 or the change in slopes between 1994–2000 and 2001–2010. Simply put, we find no evidence that the opening of the ELH had any significant effect on township home prices. It is possible, of course, that property values could have declined prior to 1994, in an anticipatory response to the Mount Laurel affordable housing controversy emergence in the 1970s. Unfortunately, we only had access to property value records for 1994 and subsequent years. Nonetheless, the findings pertaining to the 1994–2000 period, however, provide some evidence to counter an anticipatory effects argument.

Although we found no significant effect of the project's opening on property values in Mount Laurel as a whole, it may be that the township is too large an aggregate to detect price effects. Thus Figure 3 also includes LOESS curves for home prices in the two adjacent neighborhoods of Holiday Village and Hillside Lane. Of the two neighboring areas, Holiday Village is the most comparable to ELH in layout and construction, though not in composition, of course. It is a retirement village composed mainly of older couples and singles without children. Nonetheless, like ELH, it is physically composed mainly of cul-de-sacs surrounded by townhouses. It is also located directly across the street. In contrast, although it is adjacent to ELH property, Hillside Lane is a few blocks away and is more of a luxury home development targeted to wealthier families, many with young children.

The luxury nature of the Hillside Lane development is clearly indicated in Figure 3. Whereas the average home value in Hillside Lane stood at \$260,000 in 1994, considerably above the Mount Laurel average, the average home value in Holiday Village was around \$112,000, slightly below the Mount Laurel average. Home values remained flat through the late 1990s and even stagnated somewhat in Hillside Lane, but then increased beginning around 2000. Whereas the trend in Holiday Village closely followed that of the township, property values increased more rapidly in the upscale Hillside Lane neighborhood, peaking at \$534,000 in 2006.

The statistical tests performed in the bottom portion of Table 4 indicate that the price increase after 2000 in Hillside Lane was significantly greater than price increases either in the township as a whole, or in Holiday Village. In addition, the difference in slopes between 1994 and 2000 and 2001–2010 was much greater. Although the difference in the Holiday Village slopes between 1994–2000 and 2001–2010 is negative (−\$601) compared with the positive differences in the township as a whole and in Hillside Lane, Wald tests of the hypothesis that the Holiday Village slopes are equal demonstrate that the pre- and post-2001 difference is not statistically significant.

In sum, we find no statistical evidence of a discontinuity in Holiday Village property values before and after the opening of ELH. As with township-level property values, it is possible that property values at the neighborhood-level could have declined prior to the beginning of our data series in 1994, anticipating the project's construction. However, the neighborhoods of Holiday Village and Hillside Lane were only built in the early 1990s – rendering an anticipatory effect less relevant in this comparison.

In Figure 4 we present LOESS curves estimated to show trends in property tax rates in Mount Laurel and the three comparison townships from 1997 through 2010, the period for which data are available. The data consist of effective tax rates indicating the municipal-level property tax burden, adjusted by the New Jersey Division of Revenue to account for municipal tax reassessments. It is immediately apparent that property tax rates followed similar patterns in all four townships: remaining steady overall before the opening of ELH, increasing slightly in the early 2000s following the opening of ELH, and declining in the mid- and late-2000s. For most of the period under observation, Mount Laurel had the lowest tax rates and Cherry Hill the highest. Formal tests provide little evidence that the opening of ELH had any particular adverse effect on tax rates in Mount Laurel particularly.

In Table 5 we again use regression methods to estimate average linear changes in property tax rates across the four townships during 1997–2000 and 2001–2010. Although we observe a systematic increase in tax rates after 2000 in Mount Laurel, Cherry Hill, and Evesham, the rate of increase was significantly lower in Mount Laurel compared with the latter two municipalities, and this time Cinnaminson was the outlier. Owing to the reassessment, its rate of increase in taxes averaged out to zero in the post-ELH period. Even so, this rate was not significantly different from the slow rate of property tax increase observed before 2001, and prior to this date all townships experienced more rapid growth in taxes than Mount Laurel.

EXPLAINING THE LACK OF EFFECTS

In the end, we find no evidence that the opening of ELH caused an increase in crime rates, a decline in property values, or an increase in property taxes in Mount Laurel after the project opened in late 2000. How were such benign effects achieved? Here we describe the social practices of ELH residents and the practical policies of ELH staff that we believe worked to mitigate potential threats to disorder in a 100% affordable housing project. Rather than yielding disorganization within the project, these measures produced a high level of social organization, a high degree of participation by residents in community organizations, and generally high levels of satisfaction and social integration reported by residents despite their common background of material hardship.

ELH management runs what both residents and staff call a “tight ship.” The required applicant screening is thorough and includes credit checks, criminal background checks, income verification, and a home visit. Applicants with substantial criminal backgrounds are disqualified from participation. Of the population seeking affordable housing in New Jersey then, the residents of ELH are a screened subset of people who are less likely than poor people in general to have the proclivity, knowledge, and ability to engage in criminal or delinquent activities. Minority group members, however, are substantially overrepresented, with blacks comprising 59% and Hispanics 29% of all residents, compared with just 10% for whites.

In addition, project management is closely involved in the daily lives of residents. The management office is located on-site at the front of the complex, and it houses a property manager, leasing agent, and social service coordinator. A maintenance worker also lives on-site in one of the units. The staff works to resolve lease infractions quickly, and does not hesitate to employ eviction against troublesome residents. Most residents say they like the management’s heavy hand and believe that it contributes to maintaining a desirable community.

Drawing on extensions of routine activity theory elaborated in criminological and environmental criminological studies (Clarke and Robertson, 1998; Eck, 1994; Mazzerole, Kadleck, and Roehl, 1998), our findings support the idea that the presence of active place managers and their routine activities work to reduce the opportunities for criminal behavior to take place. Tenants regularly share information with the management during casual conversations when they drop off their rent every month. These conversations provide regular check-ins, in which good or bad feelings about neighbors, management, or the complex are voiced. In addition, the routine activities of place managers extend the social control that was purposefully designed and built into the housing complex.

ELH management has organized a Community Watch that meets monthly, comprised of residents and staff members, many of whom were trained by the township’s Community Watch Program. These meetings offer residents a chance to report issues and concerns and to learn from management about any police or criminal activity in the area. The local police maintain close contact with the property management, seeking and sharing any information pertaining to ongoing criminal investigations. From the project’s inception, the police

provided input into the design of ELH in an effort to build greater social control into its physical structure. As a result of police input, for example, the construction of high fences was prohibited so as not to impede the ability of residents to monitor public spaces. Although it is set back from the main roadway and located on cul-de-sacs, it is not a gated community.

Beyond these formal control mechanisms, residents have evolved a variety of informal mechanisms of social control such as the active sharing of information and the ongoing monitoring of people's behavior in and around the complex. Key components of information come from parental monitoring of children. The shared information focuses on the activities of other residents: who they are, where they work, what they are up to, who is coming in, who is leaving, problems in the home, etc. Particularly important in the flow of information are children, who serve as active collectors and distributors of data. Of particular importance in both the informal and formal management of potential disorder and criminality is the strong attention paid to outsiders---people who do not live in ELH but may be staying in or visiting the complex (Freeman and Botein, 2002).

Most residents see formal and informal monitoring as essential to the security of the complex. Our findings echo those of Miller (1998), whose study of a mixed-income development in Illinois found a similar trade-off between domestic control and public safety. Interestingly, despite frequent gripes about intrusive monitoring, ELH residents regularly complain to the management about what they perceive as insufficient screening of rental applicants, and regularly ask for stricter screening policies. As a result, little crime is reported in or around ELH. Reports of crimes are largely confined to domestic disturbances. Minor crimes do occur in ELH, but management and residents count on reliable and well developed formal and informal social control mechanisms to keep crime rates down and maintain social order. The constant monitoring of residents and visitors by residents and place managers reduces the potential that people with criminal intentions will find safe harbor in ELH.

One of the key concerns raised by local residents about the project was that it would be unattractive and easily identified as "public housing" and that poor management would quickly lead to its becoming run down, thus "bringing down" the surrounding neighborhood. In addition to implementing policies and encouraging informal actions to prevent social disorder and social isolation, therefore, management paid considerable attention to the aesthetics of the housing complex. The property developer sought to create and maintain housing that is physically and aesthetically similar to that in surrounding subdivisions by using cul-de-sac designs, spatial layouts, and materials that were roughly similar to those in nearby suburban homes. ELH consists of 140 rental units in a subdivision, organized in clusters of attached single family townhomes, built around four cul-de-sacs that feed into a single drive leading to the main entrance, which is not gated in any way. In addition, the maintenance budget for ELH has a line item for landscaping, and according to the property manager landscaping was deliberately modeled after properties in Haddonfield and Moorestown, two nearby suburbs with high average household incomes and property values.

The foregoing management practices and concerns for aesthetics have minimized the stigma of the project within Mount Laurel and generally contributed to a decreased awareness of its existence. When asked their perception of the housing, a common response from neighbors is to assess its aesthetics and to describe whether or not it looks like affordable housing. In a letter to the school district, one resident of Mount Laurel living outside of ELH stated in 2006, "I recently drove through ELH and it looked so nice you would have no clue that it's affordable housing." Indeed, as part of our larger evaluation, we surveyed 127 randomly selected residents of the two neighborhoods adjacent to the project and discovered that nearly a third of the respondents were unaware that an affordable housing project was located nearby and only 13% reported having any contact with ELH residents (Massey et al., 2013). When the affordable project finally opened, it was not with a bang but a whimper.

DISCUSSION

Our findings suggest that affordable housing can indeed be developed in an affluent suburban community without increasing social disorganization or producing negative externalities in terms of crime, property values, or taxes. Our systematic analyses of trends in Mount Laurel and surrounding municipalities revealed no significant differences in crime rates, property values, or tax burdens before or after the opening of the Ethel Lawrence Homes. Although prior studies of subsidized housing have documented negative effects on surrounding communities, such was not the case in Mount Laurel (though we were unable to assess potential environmental effects noted in previous research---see DeGenova et al., 1999).

This benign outcome did not simply happen, but was likely achieved by specific features of the project's design that were incorporated into plans and practices by developers explicitly to mitigate potential negative externalities and to promote social cohesion and security among project residents. These features include judicious selection of residents, architectural consistency with surrounding neighborhoods, careful attention to landscaping and aesthetics, close cooperation between managers and residents, access to onsite after-school programs, organization of a town watch, and close collaboration with municipal officials.

Subsidized housing assumes many forms in the United States, with a variety of income mixes, eligibility requirements, and project designs, and in many ways ELH is rather unusual. Some plans call for setting aside a small share of units for subsidy in larger market-rate developments, but in ELH all units are affordable to low and moderate income families. Other projects are open only to the very poorest families and little attention is paid to tenant selection, but ELH offers a range of affordability (ranging from 10% to 80% of the regional median income) and prospective residents are carefully screened for their suitability as tenants. In many ways, ELH offers an example of best practice to ensure the successful integration of an affordable housing project and its residents into the surrounding community.

Like the Moving to Opportunity and Hope VI programs implemented by the U.S. Department of Housing and Urban Development in the 1990s, ELH is a housing mobility program, one structured to enable residents of disadvantaged neighborhoods to relocate to

more advantaged locales that offer greater access to employment, education, and security. However, unlike these earlier mobility programs, which generally yielded modest benefits to participants, ELH was an unqualified success. Although it is beyond the scope of this paper to recount the socioeconomic progress of ELH residents, moving into the project clearly led to marked improvements in mental health, employment, and income among project residents and vastly improved educational outcomes for their children (Massey et al., 2013; Casciano and Massey, 2012a, 2012b, 2012c), suggesting that developments such as ELH provide not just access to housing, but real opportunities for poverty reduction and socioeconomic mobility.

Recent Obama administration initiatives such as the Choice Neighborhoods and Promise Neighborhoods Programs have shifted away from housing mobility schemes toward place-based programs that target distressed neighborhoods for investment in hopes of improving the lives of residents and mitigating negative spatial spillovers from concentrated poverty. There is nothing contradictory in pursuing both place-based investments and promoting residential mobility to better neighborhoods, but the experience of the Ethel Lawrence Homes suggests that the funding of well-designed and well-implemented affordable housing projects in suburbs funded by the Low Income Housing Tax Credit may provide greater benefit to participants per dollar spent while imposing no costs on host communities and little burden on taxpayers generally.

Subject: Affordable housing development on Mount Etna
Attachments: nihms768473.pdf

Hello,

I am a resident of the Mount Etna neighborhood and I am writing to let you know my concerns about the proposed affordable housing development on Mount Etna and Balboa/Genesee.

I understand that the project was initially approved for 116 units, but the city has now been trying to push through up to 450 units. I am greatly concerned about the impact of traffic and crime in my neighborhood. I just purchased my first home on Mt. Putman, so I feel I have a large stake in this development as I've purchased my home in an expensive market.

San Diego is, without a doubt, in need of affordable housing. However, I believe there is a right and a wrong way to go about doing it. I feel 450 units is too big of an ask for our neighborhood. I would be happy with the 116 units that was originally proposed and feel that our neighborhood would have no problem dealing with an additional 116 units. 450 units is just too much, and the city has also alienated a lot of our community members by suddenly proposing 4X what they originally asked for. Additionally, this housing development cannot go through without consideration for parking, traffic, and safety.

I have a research article (attached in this email) that I would like you (or someone on the planning development team) to read. It discusses a variety of practices that affordable housing developments can use to keep crime low in the suburbs that they are located in. Mainly, 1) strict, intensive screening of all applicants to the development (the most violent offenders are immediately disqualified regardless of low income status or section 8 housing vouchers status) 2) having a social worker(s) on site to help with the at risk population 3) issuing swift eviction notices for any troublesome tenants, 4) surveillance of the property to monitor crime and who is coming in and out of the property (to prevent people living in units not on leases).

Parking is also a main concern for our community, and it MUST be addressed. Surface lots alone will not be sufficient to manage the parking space need that will result from this development. It's the city's responsibility to make sure that our surrounding community is not impacted by the increase of parking from this development. A really good way to get the community members on board with this project is to address the parking situation head on. So far I haven't seen anything that addresses this issue. Make an underground lot, make a lot on the surface and put the units over the lot. Give the surrounding existing community members parking permits to ensure that they get reserved street parking and restrict the members of the development from parking on the streets of the surrounding neighborhood (I know it is heavy handed but these are things you need to do to get community support). The community around the UCSD Hillcrest hospital all have special permits that allow them to park on the street because the community knew that the Hospital would impact street parking.

Please don't dismiss the concerns of our community. I worked really hard to purchase my first home in Clairemont. At the same time I know what it's like to be faced with rising rent costs and little to no housing availability. Affordable housing and home security can absolutely make a difference in someone's life. Keeping people off the streets is good for everyone, but you have to do it right. Infrastructure of future housing

developments is incredibly important. A poorly designed project with no consideration for the existing community that it will reside in will doom your project.

Best,

Tara Tenenbaum

Subject: Etna project

I'm a home owner on mt Everest and am opposed to this project. Not only do I fear this will affect my property value , I'm concerned about the increased traffic, lack of parking, and potential increased crime. I originally lived in this area in the sixties. I retired, bought a house, and thought I would live in a quiet community. The mid fifties houses and neighborhood seems to be experiencing people updating and remodeling their homes after a period of neglect. County appraisals of homes seems to be in the 630,000 area. I doubt that the appraisal s will reflect a devaluation and lower the amount of taxes I currently am paying. If I do decide to move and find due to this project that I've loss money of my home and investment, rest assured I will sue the county to recoup my losses.

Already on my street due to construction on the school across from my house, I am dealing with construction trucks and their workers parking on my street and in some cases in front of my driveway. On Sunday's the school rents its auditorium out for a church. Again I'm dealing with overflow parking on my street. The streets are also being resurfaced and again I'm dealing with construction trucks blocking and causing traffic problems. This is all within 30 days. In addition mt Everest Blvd is being used by drivers in bypassing Genesee and balboa traffic congestion. The cars and trucks speed thru here at an unsafe velocity. We don't even have the street lamps that we are zoned for due to lack of funds. This affects our nite time safety. I have attached pictures of the construction trucks parked on my street.

Cass, I attended on of the county meetings where speakers were voicing their concerns. As one woman addressed you personally, you had become distracted and asked her to repeat her statement as you missed it. I sense a lack of real concern and interest with you and the other representatives . I hope I am wrong.

Notice the deaf child sign on this street. How do you guarantee that child and other children's safety ?

Subject: Mt Etna

I am writing to express my concerns regarding the low income housing being proposed for the Old Crime Lab on Mt. Etna. As a homeowner that is 4 blocks from this project I am objecting to the amount of units being proposed as well as changing the current zoning to accommodate such a big project. This is a family neighborhood. We chose to live outside of downtown because there is less traffic and less people. Adding over 400 units in area that is already getting overpopulated places a burden to the current residents and to the area. Proposing that all units be slotted for low income, homeless, and disabled places us in a situation where the residents of the area carries a higher burden to provide for this population than other areas such as Mira Mesa, UTC, Serra Mesa etc. Why not share the burden with other areas? We already have a low income apartment complex and a future homeless project within .5 miles from Mt. Etna. How is this fair? Make the site be for 50% low income and 50% market value as well as only allowing half the units of what is proposed.

Sincerely,
Tom Cebulski

Subject: RE: Mt. Etna Crime Lab Re-Development Site for Low-income Housing

October 18, 2018

County of San Diego
Department of General Services
5560 Overland Avenue
San Diego, CA 92123

The plan proposed at the October 15th meeting on the Mt Etna Crime Lab Re-development site by Chelsea does not even come close to fitting in with the surrounding neighborhood. The proposed height limit of 60 feet is over the 30-foot limit, over the approved housing density and is a not fit for the neighborhood. The proposed plan would be adding the equivalent of a new "neighborhood" to the existing neighborhoods of the Mount Street area without any additional expansion of surrounding facilities. For more than 30 years the City of San Diego (and the County by extension) has ignored any upgrades or expansions of public works (road building, library, water, sewer, communications, power, transportation, fire department and police) in Clairemont. We don't understand why this location was chosen when there are bigger lots east of Clairemont where the county could build thousands of units and not impact a small community with NO RESOURCES.

The Site is only approved for a "116 residential units with a 10,000 square foot neighborhood serving retail component". Instead of requesting that plans follow this description, the County has decided to push for over 400 units without any retail. In addition, the County pushed ahead with plan selection **without any COMMUNITY INPUT** and kept the plan a secret until after the approval of a development plan. This has been highway robbery!!

We're tired of the middle class families who follow the rules, pay their taxes, and work hard to be RUN over by our government. This entire project is not acceptable in any other part of San Diego County, so why should we be accepting it in our neighborhood? This facility would be the LARGEST high-density low-income/homeless housing in San Diego county. How is that fair to put this burden on our community? We currently have a 52-unit homeless senior housing that will be built over the next two years within 2 blocks of Mt. Etna and 350+ section 8 (The Stratton) housing right next door. The crime at The Stratton is so bad that the residence don't

even feel safe living there (see Yelp reviews). Clairmont has more low-income density housing than any other area surrounding it.

The homeless problem is NOT Clairemont's problem but the entire City of San Diego. We wouldn't be in this predicament if the city required the big developers to build their 10% of affordable housing. Instead they've allowed them to buy out and now you expect us to take on that burden? There should have been a better plan in place because now the problem has exploded. We'd like to see a citywide plan of affordable housing for all communities with equal numbers before any NEW developments are built in our city. This includes Mira Mesa, La Jolla, Bird Rock, Bay Park, Bay Ho, Pacific Beach, Mission Beach, Rosecrans/Midway, Little Italy, Downtown, and Mission Valley to name a few.

How are these NEW developments contributing to the low-income housing crisis?

- !Ã Town and Country Hotel = adding 850+ apartment units with NO mention of affordable housing
- !Ã Midway/Rosecrans = 11,000 new homes and apartments with NO mention of affordable housing
- !Ã Morena Blvd by NEW trolley station = 5,000+ units and NO mention of affordable housing
- !Ã Downtown/Little Italy = So much construction going on with little to NO affordable housing being built. San Diego Union Tribune quoted, "We wanted the building to have class, character and a timelessness," said H.G. Fenton CEO Mike Neal during a recent tour of the Vici, one of the most luxurious new apartment buildings in San Diego County. Average rent for a 1-bedroom downtown/Little Italy \$2900/mo. This quote goes hand and hand with every NEW development that is going on around Clairemont. All have class, lots of amenities and very little Affordable Housing.

This entire project has done one good thing for our family – it has lit a fire under us and now we are involved in politics, the Clairemont Community Planning Group, Clairemont Town Council, community discussions on future plans, and we've been able to educate ourselves on the affordable housing crisis. One thing is for sure ... we need to take care of our middle class families who are educated but cannot find affordable housing. We keep building for low-income/homeless who more than likely won't contribute to this community instead of the hardworking middle class families who make a decent wage but can't afford to live in San Diego.

We will not let the county or city take our quality of life and back-breaking investment so that they can hit their "LOW-INCOME/HOMELESS HOUSING NUMBERS". This entire project has been rushed and we will not be bulldozed over. We will take this fight public and picket every day until there is a resolution.

The County should be ASSAMED for even trying to build this monstrosity within a community that does not have the resources or land to support it.

Shame onThe County of San Diego, City Councilmember Chris Cate, Mayor Faulconer, and County Board of Supervisors.

Best,

Tyrus Barth & Lisa Hudson (Resident of Clairemont for 20 years)
3115 Mount Acmar Court
San Diego, CA 92111

Subject: Mt. Etna Concerns

Good morning Marc,

I'm sure you've heard about many of the concerns Clairemont residents have regarding the proposed Mt. Etna project, and I wanted to add my thoughts. I am not against affordable housing, but I disagree with the number of units proposed and the disregard for the height limits the community has worked so hard to keep. The influx of an additional 1,000 residents at that site will result in tremendous traffic in an already congested major intersection. The schools in the area already have a hard time supporting the number of students they currently have; additional students will only put more stress on the situation. The neighborhood simply does not have the resources to support that many new bodies in the community all at once. I hope you'll take the concerns of the residents and fight to reconsider the number of units proposed for this site and maintain the current height limits.

Thank you in advance for your time,

Victoria Ngo Border

Subject: Mt Etna project

I am appalled by what I am learning about the Mt. Etna project. At first I thought WT*, next I went to 'what idiot thought this was a good idea' then I moved on to 'follow the money'. The project shows no concern to what it will do to the existing neighborhoods surrounding the site. And the types of people it will potentially place in the neighborhood is not in the best interest of the area. It's one thing to plan a 100 unit project for seniors, persons with disabilities veterans, at risk of being homeless, it's entirely another thing to push a project through that clearly violates existing planning laws, and would allow persons with serious mental illness to live a block from an elementary school. This project is clearly designed to make someone a lot of money, with no real concern to fixing any problem. I strongly oppose this project in its current stated configuration.

Subject: Mt Etna

Save money. If you have to give low income housing, use existing structure. Keep the numbers low, the skyline low and the neighborhood impact low. We have about 50 chronic homeless in Mt. Etna, take care of them here. Build a small project in Linda Vista for their homeless, etc.

We do not want a 5 story project in Mt. Etna

Subject: Mt Etna project

Mr Cass,

As a resident of the Mount Street neighborhood directly adjacent to the county Sheriff's Crime Lab property, I am vehemently opposed to proposed development of this property to a multi-story housing facility for hundreds of disadvantaged people. I believe the intersection of Balboa and Genesee is already at maximum capacity, and this proposed development does not even have direct access to these large streets. Instead, the access is to the neighborhood street of Mt Etna, which is only one issue.

City and county planners appear to only consider the interests of big money and developers, and neglect residents interests.

I'll keep this email brief to state my opposition, and that I will join the other opposed residents of my community, to fight this development. It will destroy the quality of life in this area.

Thank you

Wes Dittman

Subject: Regarding Mt Etna Site for Affordable and Extremely Low Income Housing Project

Greetings Mr. Cass,

I am writing to with regards to the Mt Etna Site for Affordable and Extremely Low Income Housing Project. I have strong reservations, and even objections, to the project in its current state. The final feasibility study did not appear to include a traffic study. As is, the level of service of Genesee Ave and Balboa have steadily worsened with time. A large dwelling complex will severely and negatively impact the surrounding area, especially because the current infrastructure is not being improved. A fine instance of this can easily be seen at Mira Mesa off of the I-15, where several large apartment complexes have been and are currently being created. With no change to Mira Mesa Blvd, the traffic is a nightmare.

I do not wish for the same thing to happen to Genesee Ave and Balboa.

Rezoning to allow this sort of development without consideration to transportation and parking will certainly do more harm than good.

Best regards,

-William Tsueng

Appendix B
**Mount Etna Community Plan
Amendment (*Residential and
Commercial Elements only*)**

COMMUNITY PLAN IMPLEMENTATION OVERLAY ZONE

The Community Plan Implementation Overlay Zone (CPIOZ) is applied within the boundaries of the Clairemont Community per Chapter 13, Article 2, Division 14 of the Municipal Code. The purpose of the overlay zone is to supplement the Municipal Code by providing development regulations that are tailored to the three community centers (Clairemont Town Square, Genesee Plaza-Balboa Mesa, and Clairemont Village). These supplemental development regulations are designed to address landscaping, architectural design and establishment of identifiable pedestrian and bicycle circulation elements to visually and functionally integrate the centers with their surrounding neighborhood and improve the pedestrian environment. CPIOZ is also applied to the multifamily areas along Clairemont Drive and Cowley Way between Dakota Drive and Iroquois Avenue to implement a contiguous parkway streetscape environment.

RESIDENTIAL

EXISTING CONDITIONS

Of the 6,755 acres that comprise Clairemont Mesa, 4,213 acres (or 62 percent) are used for housing (**Figure 4**). The demand for housing in the community is due to: its inner-city location; job resources at Kearny Mesa, Centre City, Mission Valley and University; and, the recreational facilities of Mission Bay, Old Town, Tecolote Canyon Natural Park and Marian Bear Memorial Park. Vacant residentially zoned land in Clairemont Mesa is scarce and is predominantly located in the canyons and hillside areas. Most of the housing stock is in good condition, but some single-family homes and duplexes that were built in the 1950s and 1960s need to be renovated. With the lack of significant undeveloped land in the community, changes in housing will undoubtedly occur by the replacement of existing housing with new housing, probably at higher densities and from revitalization.

In 1989, the City Council adopted a 30-foot height limit for almost all of Clairemont Mesa (**Figure 5**). The height limit is intended to maintain the low-scale character of development in the community and to preserve public views of Mission Bay and the Pacific Ocean from western Clairemont. This community-wide height limit replaced the West Clairemont Height Limitation Overlay Zone that applied only to a portion of the community. Residents in the community believe that the number of guest quarters and companion units that have been developed in single-family neighborhoods is changing the character of those neighborhoods. Residents also feel that the conditions of approval for some of those permits are not adhered to. In Clairemont Mesa, approximately eight companion units were constructed as of 1987 and approximately four guest quarters were constructed as of 1987. The City of San Diego requires conditional use

permits for these additions when the addition is to be used for guest quarters or companion units.*

Approximately 41 percent of the multifamily development in Clairemont Mesa is comprised of duplexes located along the Clairemont Mesa Boulevard corridor and Clairemont Drive (**Figure 4**). The duplexes are in scale with the surrounding single-family homes, however, residents in the community believe that the deterioration of these duplexes has affected housing values and the image of Clairemont Mesa.

The deficiency of off-street parking resulting in a lack of on-street parking and alleys congested with parked cars has also been a problem. The duplexes located east of Clairemont Drive between Clairemont Mesa Boulevard and Feather Avenue have been redeveloping and are subject to the Hillside Review Overlay Zone and Tecolote Canyon Rim Development Guidelines which will assure that new development will occur in a manner that protects the environmental resources and aesthetic qualities of the area.

In Clairemont Mesa, there are two mobile home parks, Coastal Trailer Villa and Morena Mobile Village, both with the Mobile Home Park Overlay Zone (**Figure 6**). The purpose of the overlay zone is to provide adequate sites for mobile homes consistent with the City's goal of accommodating alternative housing types. Both mobile home parks are located on Morena Boulevard (**Figure 6**) and are within walking distance to public transit, commercial services, Tecolote Park and Recreation Center and Mission Bay. Coastal Trailer Villa is over 30 years old with established long term residents. Most of the units in the park are older recreational trailers that would most likely not be acceptable in other mobile home parks. The park is in fair condition and would benefit from on-site landscaping improvements and recreational facilities.

The second mobile home park, Morena Mobile Village, is also over 30 years old and has a combination of recreational trailers and mobile homes. Over the years, the park has undergone refurbishment to improve the park's landscaping and appearance of the units. The park is in good condition and offers on-site recreational facilities.

In Clairemont Mesa, there is only one historic site, the Stough-Beckett cottage that is listed on the City of San Diego Historic Site Board Register. The cottage was constructed in 1888 and has been completely restored. The architectural style is "Eastlake," and is an example of a modest Victorian rural home. The cottage is located in the southern portion of Clairemont Mesa at 2203 Denver Street.

* Guest quarters are located on the same premises with the main dwelling unit for the use of a person employed on the premises, members of the family or a temporary guest. Companion units are self-contained dwelling units (including a kitchen which is permitted in addition to that of the main dwelling unit) and may be rented by a member of the family, a person over 60 years of age, or a handicapped person.

HOUSING TYPE, TENURE AND VALUE

According to 1980 census data, there were 30,121 housing units in Clairemont Mesa. This represents an 18 percent increase in the number of housing units for Clairemont Mesa since 1970. During the same ten-year period, the number of housing units in the City of San Diego increased by more than 29 percent (**Table 1**). Approximately 69 percent of the housing units in Clairemont Mesa are single-family and 31 percent are multifamily. Single-family units in 1985 had increased by three percent since 1970, totaling 21,817 units, while multifamily units had more than doubled during the same time period, totaling 9,652 units. Within the community, 63 percent of the housing units are owner-occupied, compared to 49 percent on a citywide basis. In 1986 the average sale price for a home in the north central portion of the City, according to the San Diego Board of Realtors, was \$132,695. This figure is slightly lower than the citywide average sale price of \$134,774 for the same period.

**TABLE 1
CLAIREMONT MESA HOUSING UNITS 1950 – 1980**

	1950	1960	1970	1980	1970-1980 % Change
Clairemont Mesa (CM)	1,133	18,111	25,589	30,121	18.4
City of San Diego	110,005	192,269	241,010	341,928	29.5
CM Housing Units as a Proportion of the City	1%	9.4%	10.2%	8.81%	

Existing land uses generally correspond to the existing zoning. **Table 2** and **Figure 7** provide a summary of existing residential land uses by zone for Clairemont Mesa.

**TABLE 2
LAND USE IN RESIDENTIAL ZONES (in acres)**

Residential Zones	Acres in Zone	Total Acres	Residential Single-family	Multifamily	Commercial	Other	Vacant
R1-15000	1,143	94	94	0	0	927	122
R1-5000	4,452	3,684	3,684	0	3	568	197
R-3000	421	205	47	159	1	209	6
R-1500	46	45	*	45	0	0	1
R-1000	194	176	4	172	*	5	12

Figure 7 Existing Residential Zoning

No change

POPULATION CHARACTERISTICS AND INCOME

According to 1980 census data, the population of Clairemont Mesa was 77,547. Between 1970 and 1980, the community experienced a decline in population of approximately 6.2 percent. During this period, the City's total population grew approximately 25.7 percent (**Table 3**).

**TABLE 3
CLAIREMONT MESA POPULATION 1950 – 1980**

	1950	1960	1970	1980	1970-1980 % Change
Clairemont Mesa (CM)	3,372	62,137	82,634	77,547	- 6.2
City of San Diego	334,587	573,224	696,769	875,538	+ 25.7
CM as a Proportion of the City	1%	10.8%	11.9%	8.9%	

The community's decrease in population from 1970 to 1980 was due to a decline in the average family size, which decreased from 3.4 persons in 1970 to 2.7 persons in 1980. This compares to the citywide average of 2.8 persons in 1970 and 2.5 persons in 1980. During this period, there was a decline in the number of children from zero to 14 years of age and an increase in adults from 20 to 34 and 55 to 64 years of age. The average family size in Clairemont Mesa is projected to decrease from 2.7 persons in 1980 to 2.6 persons by 1990 and until the year 2000. This compares to the citywide average of 2.5 persons by 1990 and 2.4 persons by the year 2000. The community's median family income, according to the 1980 census data, was \$22,918, which was higher than the citywide median income of \$20,133.

VACANT RESIDENTIAL LAND

By 1988, Clairemont Mesa had approximately 358 acres of vacant residential land that are mostly located in the City's open space retention areas (**Figure 32**). Development has occurred in some of the privately owned canyons that were previously designated as open space in the 1970 community plan. These areas include: Alcott Estates, a 59-acre subdivision located north of Jutland Drive; Stonehaven, a 65.7-acre Planned Residential Development project located south of Jutland Drive; Canyon Haven, a 19.3-acre Planned Residential Development with six acres in an open space easement located at the southern portion of Stevenson Canyon; Mission Bay Valley Estates, a 7.9-acre subdivision with 5.4 acres in an open space easement located north of Clairemont Drive; and a 13-acre subdivision on Erie Street. Pressure for development in the privately owned canyon areas will continue because of the development amenities such as the canyon views and rural aesthetics in an urban environment. As development occurs, however, it must meet the underlying zone and City regulations.

PROJECTED GROWTH

In summary, Clairemont Mesa is an urbanized community and for the most part is built out. Future development of the vacant residential land and redevelopment opportunities could result in an addition of 1,100 dwelling units (not including mixed-use development), totaling 33,000 dwelling units or a three percent increase over the existing stock in the next 15 years.

OBJECTIVES FOR RESIDENTIAL DEVELOPMENT

1. Provide a diversity of housing options in selected locations of the community.
2. Preserve the mobile home parks on Morena Boulevard to continue providing alternative means of housing.
3. Provide development guidelines to help ensure that new development is compatible with the existing neighborhood and does not overburden community or neighborhood facilities.
4. Locate higher density housing near the commercial areas where there are adequate services.
5. Provide adequate off-street parking.

RECOMMENDATIONS FOR RESIDENTIAL DENSITIES

1. Protected Single-family Neighborhoods

Areas recommended for residential density ranges of zero to ten dwelling units per net residential acre, shown on **Figure 8**, are characterized by traditional single-family development (e.g. detached housing units on individual lots). These areas are recommended to have single-family zoning (R1-40000, R1-15000 or R1-5000) and should be protected as single-family neighborhoods in the future. Therefore, requests for rezonings or other discretionary actions in these areas that could result in construction of any type of residential structures other than traditional single-family residential dwellings, with one dwelling unit per lot, should be denied.

2. Single-family Development

Planned Infill Residential Development (PIRD) permits should be used to develop new units in existing neighborhoods with single-family zoning or a combination of single-family and multifamily zoning. The PIRD regulations control residential development in already developed areas by assuring its compatibility with existing surrounding development, in terms of site design, architecture and density.

3. Residential Density Identification

Residential development should occur at densities shown on **Table 4** and in **Figure 8**. The density ranges are based upon dwelling units per net residential area (du/nra).

4. Rezoning

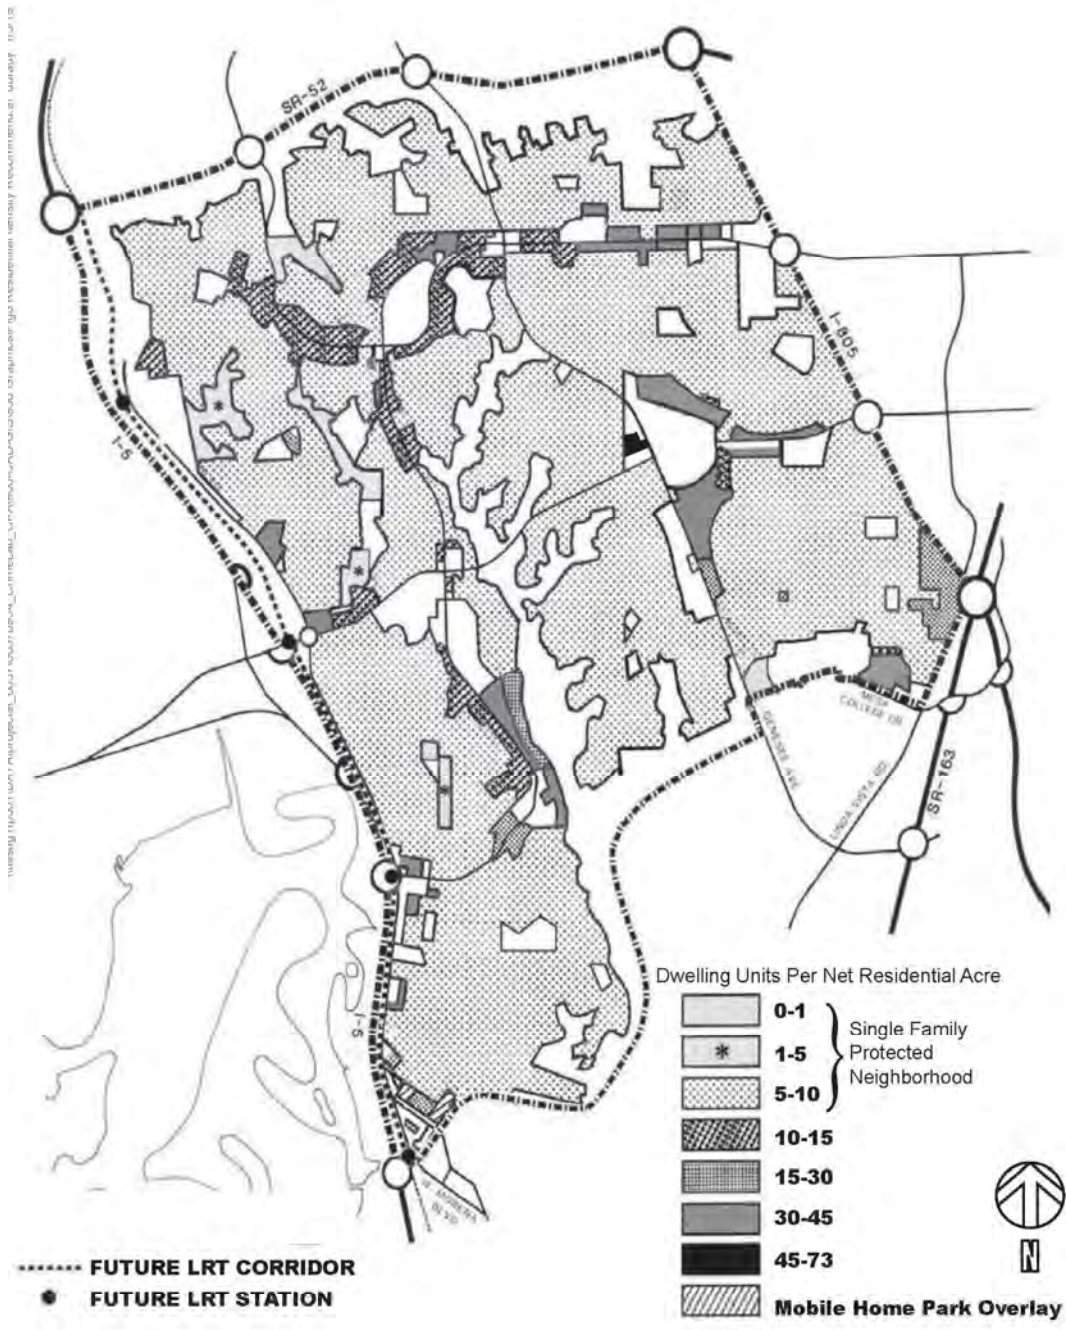

- a. The following areas should be rezoned from R-3000 to R1-5000 in order to maintain the low-density character of predominantly single-family neighborhoods: Pocahontas Avenue, north of Luna Avenue; Moraga Avenue, south of Idlewild Way; and, Onodaga Avenue between Clairemont Mesa Boulevard and Willamute Avenue (**Figure 38**).
- b. The duplexes on Clairemont Drive, between Balboa Avenue and Ute Drive should be rezoned from R-3000 to CO to be consistent with the surrounding commercial development (**Figure 38**). The site should redevelop with offices because the area is close to Balboa Avenue with good access from Clairemont Drive. On-street parking is available on Clairemont Drive and Modoc Drive.
- c. The area located east of Cowley Way, south of Dakota Street and north of Iroquois Avenue should be rezoned from R-1000/HR to R-2000/HR (**Figure 38**). Future development at this density will be more compatible with the adjacent Tecolote Canyon Natural Park and single-family development to the north. This rezoning includes the approved residential development project, Villamar, which has developed under the R-2000 zone. The property is subject to the Hillside Review Overlay Zone and the Tecolote Canyon Rim Development Guidelines.

**TABLE 4
RECOMMENDED RESIDENTIAL DENSITIES**

Designation	Density Range (du/nra)*
Designated Open Space**	0 – 1
Very Low	1 – 5
Low	5 – 10
Low-Medium	10 – 15
Medium	15 – 30
Medium-High	30 – 45
High	45 – 55 73

Residential Density Recommendations

Clairemont Mesa Community Plan
 Draft Mt. Etna Community Plan Amendment

8
 FIGURE

RECOMMENDATIONS FOR RESIDENTIAL DEVELOPMENT – CPIOZ B

The Community Plan Implementation Overlay Zone, Type B should apply to the area west of Cowley Way, south of Dakota Drive and north of Iroquois Avenue (**Figure 38**). The existing development, known as the Buena Vista Gardens, is currently developed with older multifamily housing at a density of less than that permitted by the underlying R-1000 Zone. Mature street trees in the public right-of-way and landscaping in the front yard setback create a parkway streetscape environment in this project. These significant site features could be lost from pressures to redevelop the site with the R-1000 Zone. In order to ensure the continuance of the streetscape environment along Clairemont Drive, Cowley Way and Dakota Drive, the following development features should be incorporated into the site design:

1. Maintain the 25-foot front yard setback and stagger buildings to create breaks between structures. This will help avoid the look of “row housing” along Cowley Way and Clairemont Drive.
2. Provide a landscaped buffer with a 25-foot front yard setback along Dakota Drive to help create a transition area between the new multifamily development and the single-family residential neighborhood to the north.
3. Provide garages that are concealed from the public right-of-way.

MT. ETNA RESIDENTIAL DEVELOPMENT – CPIOZ A

CPIOZ, Type A sets the framework for infill development within the Mt Etna site shown on Figure 8A and provides supplemental development regulations to ensure a high-quality development that provides needed affordable housing opportunities near transit, shopping, and employment. The CPIOZ, Type A regulations are intended to result in development that is integrated within the Community Core, provides frontage elements that promote safe pedestrian activity, non-residential ground floor uses that support and enhance the public realm, supports multi-modal travel, strengthens community connectivity and identity, and promotes village-like development opportunities within the Community Core.

The proposed development shall comply with the following supplemental development regulations of the CPIOZ and be consistent with the general intent of the RM-3-9 zone as modified by these regulations and any incentives or waivers granted pursuant to Article 3: Supplemental Development Regulations, Division 7: Affordable Housing Regulations of the San Diego Municipal Code and any State allowed density bonus incentives. The proposed development will conform to the base density of the RM-3-9 zone and intends to qualify and obtain approval for density bonus at the time of project submittal to permit 404 dwelling units.

Figure 8A
Mt. Etna CPIOZ Type A Boundary

SUPPLEMENTAL DEVELOPMENT REGULATIONS

SDR 1. Expected Development

The intent of the Mt. Etna CPIOZ, Type A regulations is to provide primarily for multi-family residential uses that complement the surrounding community core and existing single-family residential uses. Additional uses that activate the ground floor and provide community benefit for residents and the surrounding community are also desired. Permitted uses within CPIOZ, Type A area are as follows:

Multiple Dwelling Units

- a. The multiple dwelling units may have on-site support services.

Non-Residential Ground Floor Area

- a. A minimum of 1,500 square feet of non-residential ground floor area is required.
- b. The minimum square footage cited above will be public spaces or uses allowed within the base zone.

SDR 2. Height

The maximum building height shall not exceed 70 feet including all affordable housing incentives.

SDR 3. Building Setbacks

The following building setbacks are intended to encourage pedestrian scale and compatibility with adjacent uses. Any minimum setback not included below would be consistent with the existing San Diego Municipal Code standard for the RM-3-9 zone.

- a. The minimum building setback from Genesee Avenue is 0 feet from the property line.
- b. The minimum building setback from the south property line is 10 feet (this does not apply to Genesee Avenue).
- c. The minimum building setback from the westerly property line is 10 feet.

SDR 4. Landscaping and Streetscape Landscaping

Landscape Requirements

A minimum of 15 percent of the site must be landscaped. Any required landscaping, such as for required setbacks or parking lots, will count towards meeting the minimum amount of required landscaped area.

- a. The minimum required landscaped area may be reduced to 10 percent of site area when the site includes an area with minimum dimensions of 15 feet by 15 feet planted with at

least one large-canopy tree. At least 50 percent of the ground area within this space must be planted with ground cover plants and the remainder may be hard-surfaced for use by pedestrians.

- b. Landscaped areas raised above ground level may be used to meet the minimum landscaped area standard when soil depth is a minimum of 30 inches.
- c. Up to 50 percent of the required landscaped area may be for pedestrian use, such as walkways and plazas, if the area is surfaced with pervious pavement approved by the City. If this provision is used, no impervious surfaces can be counted toward meeting the minimum landscaped area standard.

Street Trees

Street trees will be planted and maintained along public street frontages to provide a shaded pedestrian environment and give a pedestrian character to the street. As determined feasible and agreed upon by the City Engineer, the street trees shall conform to the following conditions:

- a. Each street tree shall receive a minimum of 10 cubic feet of below surface volume.
- b. Street trees in tree grates are allowed; however, if trees in tree grates are selected landscaped parkways must incorporate a permeable hardscape that allows water infiltration.

SDR 5. Ground Floor Design

At least 1,500 square feet of non-residential ground floor uses are required to facilitate multi-modal access and community connectivity.

- a. All non-residential ground floor uses shall be oriented so that the primary pedestrian entrance(s) are from an abutting public street.

SDR 6. Building Articulation

The purpose and intent of these regulations is to diminish the overall visual mass of the building, create significant variations of the exterior façade, and enhance the view of the building by pedestrians and passersby.

- a. Building facades shall be varied and articulated to provide visual interest. This can be accomplished by incorporating the following: changes in wall texture and color, changes in material and color, and special architectural elements such as: inset balconies, vertical fins, horizontal shading devices, roof overhangs, varied decorative railings and offsetting planes.
- b. All building elevations fronting a public street or private street shall be composed of offsetting planes that provide relief in the building façade by inseting or projecting

surfaces (planes) of the building. The minimum horizontal separation between planes is based on the length of the new building façade as shown below:

	<u>Length of Building Façade</u>	<u>Offsetting Plane Requirements</u>
<u>1</u>	<u>0-25 feet</u>	<u>Two planes with a minimum separation of 6 inches</u>
<u>2</u>	<u>More than 25 feet but less than or equal to 50 feet</u>	<u>Four planes:</u> <ul style="list-style-type: none"> • <u>Two with a minimum of 6 inches¹</u> • <u>Two with a minimum of 1 foot</u>
<u>3</u>	<u>Each additional 50 feet of façade beyond the first 50 feet</u>	<u>Must incorporate the requirements of #2</u>

¹ This requirement can be satisfied with the substitution of one of the following:

1. Nominal 2 inch recess around windows.
2. The use of two building materials.
3. Building color blocking using two colors.
4. Variation of balcony guardrail design.
5. Inclusion of a court.
6. Addition of bay windows.
7. Insert balconies.
8. Exterior shading devices such as overhangs, shadow boxes, and vertical fins.

c. Roof Designs:

- i. Roof design shall include breaks or variations in the roof line.
- ii. Any appurtenances or mechanical equipment on a flat roof shall be grouped and screened.

d. Pedestrian Entrances and Connections: The purpose and intent of these regulations is to provide a logical interconnected network for pedestrians to facilitate access to the premises and internal circulation within the premise.

- i. Pedestrian Entrances: A minimum of one direct at-grade pedestrian entrance shall be required from the public right-of-way for every 300 feet of street frontage.
- ii. Internal Pedestrian connections: A system of walkways shall connect all pedestrian entrances on the site and provide connections to other areas of the site used by building occupants and visitors, including parking areas, and any pedestrian amenities. Pedestrian connections to public sidewalks may be substituted for internal connections for main entrances that are within 10 feet of a public sidewalk.

SDR 7. Screening and Fencing

Screening and fencing shall be provided consistent with the following:

- a. All storage areas shall be contained within an enclosed building area. Outdoor storage is prohibited unless completely screened from public view. Storage areas shall not be placed facing a public right-of-way.
- b. Enclosures that surround the development are prohibited. Fencing can be used to delineate property boundaries, but shall not be used to create an enclave separate from the surrounding neighborhood.
- c. Chain link fencing is prohibited.

SDR 8. Residential Open Space

A minimum amount of outdoor living area must be provided for residents as follows:

- a. Private Exterior Open Space: Private open space shall be provided on a balcony, patio, or roof terrace for at least 50 percent of all residential units, with a minimum area of 40 square feet and a minimum dimension of 4 feet in any direction. Balconies should be proportionately distributed throughout the development in relationship to floor levels and sizes of units.
- b. Common Space: Residential development must provide common space either indoor or outdoor at grade, podium level, or roof level. Common indoor or outdoor open space areas shall have a minimum dimension of 15 feet, or 25 feet when bordered by three building walls exceeding a height of 15 feet and may contain active and/or passive areas and a combination of hardscape and landscape features, but a minimum of 10 percent of the common outdoor open space area(s) must be planted. Common outdoor open space may be separate spaces designed for families and/or seniors and must be accessible to residents of the project.
- c. Surfacing materials: Required outdoor areas shall be surfaced with lawn, pavers, decking, or sport court paving to allow the area to be used for active or passive recreational use.
- d. Amenities, such as tables, benches, trees, shrubs, planter boxes, garden plots, pet areas, spas, fitness circuits, or pools, may be counted as common space. Common space may also be developed with amenities such as play areas, plazas, roof-top patios, picnic areas, and open recreational facilities.

SDR 9. Environmental Protection Standards

- a. Any project proposed on-site is required to implement the feasible mitigation measures described in the Final Environmental Impact Report for the Mount Etna Community Plan Amendment and Rezone Project, SCH No. 201891016. Mitigation implementation and

timing is subject to the language in the final Mitigation Monitoring and Reporting Program (MMRP).

- b. Any project proposed on-site must submit a complete project-level Climate Action Plan (CAP) Consistency Checklist and have the checklist approved by City staff prior to the issuance of a building permit.
- c. Any project proposed on-site must prepare a project-specific waste management plan and have the plan approved by City staff prior to the issuance of a building permit.

RECOMMENDATIONS FOR HILLSIDE DEVELOPMENT

1. Preservation of Open Space

Sites that should be designated as open space and rezoned to R1-40000/HR (one dwelling unit per 40,000 square feet and the Hillside Review Overlay Zone) in order to preserve existing canyon and natural open space systems (**Figure 32** and see **Open Space and Environmental Resources Element**) include:

- a. Approximately 39 privately owned acres comprising the northern two-thirds of Stevenson Canyon, located north of Ecochee Avenue and west of Clairemont Drive.
- b. A finger canyon of Tecolote Canyon, located south of Marlesta Drive and east of Genesee Avenue.
- c. A finger canyon of San Clemente Canyon, located south of San Clemente and east of Regents Road.
- d. Approximately five privately owned acres comprising the northern one-half of Padre Canyon, located west of Clairemont Drive and north of Erie Street.

2. Hillside Review Overlay Zone

- a. Residential development in the Hillside Review Overlay Zone must conform to the development design guidelines of that zone to assure that new development will occur in a manner that protects the environmental resources and aesthetic qualities of the area. Development should be clustered on the flatter portions of sites and grading should be minimal in order to preserve natural landforms and vegetation (**Figures 9 and 10**).
- b. The subdivision of single-family lots in the Hillside Review Overlay Zone should not result in a change in the neighborhood character by permitting the location of new houses behind and/or below existing houses rather than along the street, which is more characteristic of Clairemont Mesa.

Figure 9 Hillside Review Overlay Zone (HR)

No change

Figure 10 Hillside Development

No change

- c. New development along the rim of Tecolote Canyon, San Clemente Canyon and all designated open space areas must be in accordance with the Tecolote Canyon Rim Development Guidelines and Hillside Review Overlay Zone to protect the open space system.

RECOMMENDATIONS FOR COMPANION UNITS AND GUEST QUARTERS

1. Limits on Location

- a. The development of companion units and guest quarters should be permitted only in areas where such development will not adversely impact surrounding neighborhoods or the natural features of a site.
- b. Companion units and guest quarters should not be developed in the Hillside Review Overlay Zone, areas designated as open space or on lots smaller than 5,000 square feet.

2. Architecture/Design

Companion units and guest quarters should be designed in a manner that is architecturally compatible with the main house and preserves the visual character of the single-family neighborhood from the street.

RECOMMENDATIONS FOR AFFORDABLE HOUSING

1. Range of Densities

The range of housing densities recommended in this Plan (see **Figure 8**) should be maintained in order to provide a variety of housing types for both ownership and rental at varying costs.

2. Preservation and New Construction

Low- and moderate-income housing should be provided by preserving existing housing in this category and by encouraging the construction of additional affordable units.

3. Assistance Programs

City and other governmental programs should be utilized for the development of low- and moderate- income housing. The affordable Housing Density Bonus, Community Development Block Grant funds, Department of Housing and Urban Development programs are examples of existing affordable housing programs.

4. Compatibility

Densities and housing types of proposed low- and moderate-income housing projects should be compatible with surrounding neighborhoods.

RECOMMENDATIONS FOR MOBILE HOME PARKS

1. Morena Mobile Village

The mobile home park on Knoxville Street (**Figure 8**) should remain as such in order to provide a diversity of housing options for residents of all income levels.

a. Single-family Housing

The zoning on that portion of the site which is within the boundaries of the Mobile Home Park Overlay Zone (see **Figure 6**) should remain in the R1-5000 Zone and be designated as a protected single-family neighborhood. In this way, any alternative use of the residentially zoned portion of the site will be limited to single-family housing in a density range of five to ten dwelling units per acre.

b. Alternative Use – Recreational Facility

As an alternative to residential development, the site could be redeveloped with a recreational facility. This area has three recreational uses (Tecolote Canyon Natural Park, Tecolote Park and Recreation Center and private tennis courts) and an additional recreational facility would be compatible with these surrounding facilities. Landscaping improvements along the perimeter of the site adjacent to Tecolote Creek channel should be the same as the requirements stated above.

2. Coastal Trailer Villa

The mobile home park on Morena Boulevard (**Figure 8**) should remain as such in order to provide a diversity of housing options for residents of all income levels.

a. Single-family Housing

The zoning on that portion of the site which is within the boundaries of the Mobile Home Park Overlay Zone (see **Figure 6**) should remain in the R1-5000 Zone and be designated as a protected single-family neighborhood. In this way, any alternative use of the residentially zoned portion of the site will be limited to single-family housing in a density range of five to ten dwelling units per acre.

RECOMMENDATIONS FOR HEIGHT AND SCALE

1. Harmony should be promoted in the visual relationships and transitions between new and older buildings. New buildings should be made sympathetic to the scale, form and texture of the surrounding neighborhood.
2. The height of new buildings should relate to the height of existing development. Tall buildings immediately adjacent to low buildings could create problems such as excessive shadows, undesirable wind tunnels, and lack of privacy.
3. Abrupt differences in scale between large commercial buildings and adjacent residential areas should be avoided. Gradual transitions in scale are preferred.

COMMERCIAL

EXISTING CONDITIONS

Clairemont Mesa contains several commercially zoned sites evenly distributed throughout the community (**Figures 11 and 12**). These sites comprise approximately 297 acres, of which 251 acres are developed with commercial uses, 23 acres are used for residential purposes, 19 acres contain other uses, and four acres are vacant (**Table 5**). Some of the commercial properties have been developed under the C Zone which has minimal development regulations, such as no off-street parking or setback requirements. In Clairemont Mesa, office and retail commercial consist of four community shopping centers, several neighborhood commercial centers, strip commercial development and visitor uses.

TABLE 5
LAND USE IN COMMERCIAL ZONES (in acres)

Commercial Zones	Acres in Zone	Total Acres	Residential		Commercial	Other	Vacant
			Single-family	Multifamily			
C	10	3	1	2	10	4	1
C-1	*	0	0	0	*	0	0
CA	191	2	*	2	191	7	0
CN	30	2	0	2	30	3	0
CO	17	13	0	13	17	5	3
CP	3	0	0	0	3	*	0
CR	0	3	3	0	0	0	0
Total:	251	23	4	19	251	19	4

- Less than one acre.
Numbers may not add up due to rounding

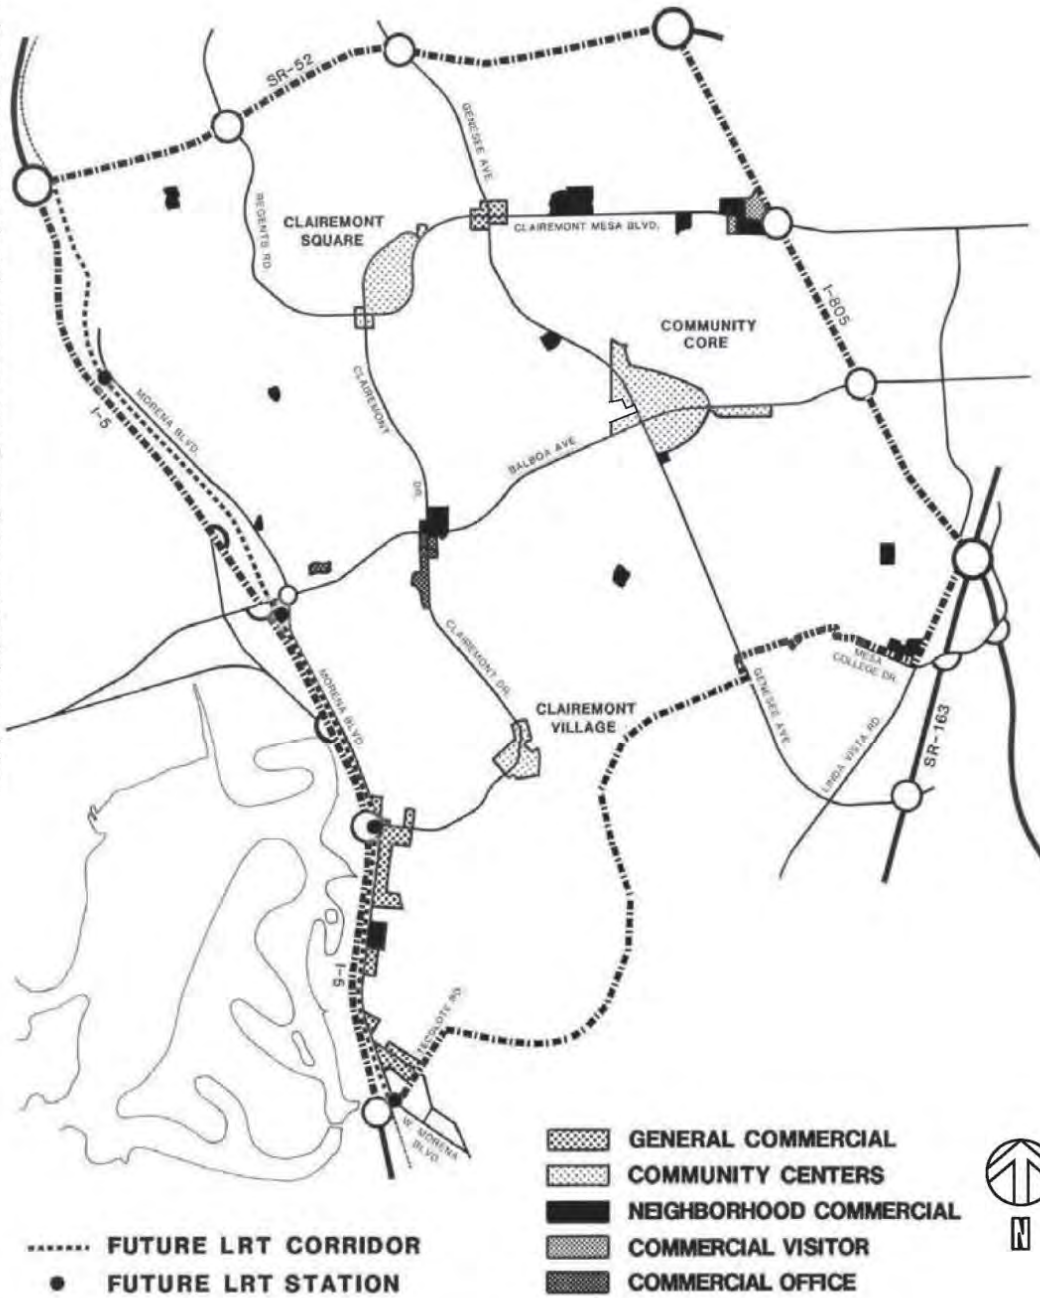

COMMUNITY CORE

The community core is located near the intersection of Genesee Avenue and Balboa Avenue (**Figures 11 and 12**). The core area encompasses approximately 105 acres, consisting of Genesee Plaza and Balboa Mesa shopping centers, Balboa Crest (a commercial strip center), and Balboa Towers (a medical office development). Traffic along Balboa Avenue and Genesee Avenue has increased creating some congestion during the early morning and late afternoon periods. In Clairemont Mesa, these two streets are well traveled because they serve as the primary east-west, north-south major thoroughfares other than the freeways which are located at the north, east and west boundaries of the community (see **Transportation Element**).

Figure 11 Existing Commercial Zoning

No change

\\ussdgr1p001\DATA\Projects_0057160570854_CrimeLab_CPAI800-CAD-GIS\950 Graphics\Fig 12 Commercial Landuse at dbrady 1/7/18

Commercial Land Use Recommendations

Clairemont Mesa Community Plan
 Draft Mt. Etna Community Plan Amendment

12
 FIGURE

Balboa Mesa and Genesee Plaza shopping centers consist of 85 acres with over 50 retail stores. These centers are in fair condition and are underutilized with one-story buildings surrounded and separated by excess parking and vacant land. Both centers would benefit from signs that are more compatible with the scale and height of buildings in the center. An improved internal automobile, bicycle and pedestrian circulation system is also needed, in addition to improving the landscaping along the sidewalks on Balboa Avenue.

The surrounding ~~commercial~~ development to the west [of the Commercial Core](#) consists of the Balboa Towers, the presently vacant ~~Clairemont Mesa Community Hospital~~ [Mt. Etna site](#), and four acres of vacant commercially zoned land on Genesee Avenue. Balboa Towers are two relatively new medical buildings that are seven and nine stories tall. A pleasant feature along Genesee Avenue in the core area is the landscaped median and street trees in the public right-of-way. Development to the east consists of a strip commercial area named Balboa Crest. The center is in fair condition and mostly low in scale except for a private school that is nine stories tall.

Community Shopping Centers

The remaining two community shopping centers, Clairemont Square and Clairemont Village, were built in the 1950s. Clairemont Square consists of 52 acres and is in good condition. The center is located adjacent to the intersection of Clairemont Drive and Clairemont Mesa Boulevard. Clairemont Village consists of 25.2 acres and is also in good condition. The center is located on Clairemont Drive between Iroquois Avenue and Burgener Boulevard. The centers have undergone rehabilitation to modernize the sites, however, both shopping centers would benefit from improved signs and pedestrian access to the center from the surrounding development (**Figure 12**).

Neighborhood Commercial Centers

Clairemont Mesa had 13 neighborhood commercial centers. Two of these centers have been redeveloped with medium-density residential development. Both of these sites are located in single-family neighborhoods. Out of the remaining 11 neighborhood centers, one site, on the corner of Havasupai and Galatin Way, has a mixture of residential and commercial uses.

The 11 neighborhood centers are evenly distributed throughout the community (**Figure 12**) and range in size from 0.75 acres to ten acres. Some of the centers are older developments that need to be revitalized to enhance their appearance in the surrounding neighborhoods, while the centers on Moraga Avenue and Geddes Drive, Clairemont Mesa Boulevard and Diane Avenue, and Linda Vista Road and Mesa College Drive have redeveloped with commercial services.

Other Commercial Areas

The commercial strip development along the southern portion of Morena Boulevard between Clairemont Drive and Tecolote Road consists of 31 acres and has a mix of commercial zones (**Figure 12**). Examples of uses in this area include offices, mini-markets, restaurants, car sales and residential development. The area is in need of redevelopment because most of the commercial properties were developed under the C Zone which is an obsolete zone with minimal development requirements. The commercial strip would benefit from increased off- street parking and new landscaping which meets current standards, including landscaping in the public right-of-way. The area would also benefit from improved signage because there are many illegal signs still remaining.

There is one area in the community with a concentration of visitor-oriented commercial uses. The uses include two motels and a restaurant located on Clairemont Mesa Boulevard, west of Interstate 805 (I-805) (see **Figure 12**). This development is relatively new and visible from the freeway. In addition to the commercial development on Morena Boulevard and in the community core, Clairemont Mesa has commercial office development on Moraga Avenue, north of Balboa Avenue and on Clairemont Drive, south of Balboa Avenue (**Figure 12**). The office development is in good condition. The landscaping along Balboa Avenue from the office development on Moraga Avenue provides a scenic entryway into the community. A few of the properties on Clairemont Drive were residential duplexes that have been converted to medical offices, as permitted by the underlying CO Zone.

OBJECTIVES FOR COMMERCIAL DEVELOPMENT

1. Develop the community core as a town center with unique, architectural, sign and landscaping theme with pedestrian walkways and bikeways.
2. Ensure the availability of adequate commercial facilities within the community core to meet the needs of the existing and projected residential population of Clairemont Mesa.
3. Require commercial areas to incorporate landscaping which will help to integrate the commercial development into the surrounding neighborhood.
4. Design commercial areas to best utilize the existing transportation system and provide pedestrian linkages to and within commercial development as well as connections to adjacent uses.
5. Maintain commercial uses in neighborhood commercial centers.
6. Revitalize the commercial area along the southern portion of Morena Boulevard and improve both vehicular and pedestrian access along the Boulevard.

7. Design signs as an integral part of a development project which are informative, compatible with the scale of surrounding development and architecturally compatible with the project and surrounding area.

RECOMMENDATIONS FOR THE COMMUNITY CORE – CPIOZ

The Community Plan Implementation Overlay Zone (CPIOZ), Type B with a Planned Commercial Development permit should apply to the community core located on Balboa Avenue and Genesee Avenue (**Figure 38**). Development under the existing CA Zone lacks a pedestrian environment in the core area, including walkways that should provide direct access to adjacent residential neighborhoods. The development should be enhanced with landscaping in the public right-of-way, setbacks and parking lots. The internal automobile and bicycle circulation system and transit stops are also not well defined in the core area. As redevelopment occurs with CPIOZ, emphasis should be placed on creating a pleasant and convenient shopping environment for residents in Clairemont Mesa.

The community core has been defined based on existing land uses, the central location in the community, vacant and underutilized land which provides opportunity for additional growth and circulation. The core area should be the focal point of the community and continue providing commercial services for residents in Clairemont Mesa. The proposed growth of the community core would not encroach into single-family neighborhoods because of existing and well-established multifamily areas that serve as a buffer between the core and nearby single-family areas.

1. Use

Commercial uses only should be permitted in the community core. Residential land uses should not be permitted in order to preserve the core as the commercial center of the community (**Figures 13 and 14**).

2. Hospital Use

~~—Any expansion of or revision to the use of the existing Clairemont General Hospital will require an amendment to the existing Conditional Use Permit or an equivalent permit process. Any hospital facility developed in the community core, or any reuse of the existing hospital facility should be a community-serving facility.~~

3. Architectural and Site Design

The Community Plan Implementation Overlay Zone (CPIOZ) Type B with a Planned Commercial Development permit should apply to the community core. This will help ensure that development will occur with a unifying architectural, sign and landscaping theme, pedestrian walkways and bikeways.

- a. Development in the core should include plazas in a park-like setting. The plazas should be the focal point for the community core (**Figure 15**).
- b. Outdoor restaurants should be located on the ground floor incorporating views and physical access into the plazas. Restaurants will be an important feature in establishing pedestrian activity in the core area.
- c. Direct internal pedestrian, bicycle and automobile linkages to adjacent commercial areas should be incorporated in the site design in order to reduce traffic congestion and circulation conflicts on public streets.
- d. New commercial development should be integrated into existing development to provide direct pedestrian access by linking the public right-of-way and the internal walkways of the core area.
- e. Internal walkways should be a minimum of ten feet wide and connect to public sidewalks. The walkway should be landscaped with trees, shrubs and ground cover. A bicycle/pedestrian bridge should be constructed over Balboa Avenue to connect the two shopping areas in order to improve pedestrian circulation, reduce traffic congestion and provide a landmark feature for the core area (**Figure 15**). The recommended bridge should accommodate bicyclists, as well as pedestrians, and should be designed in such a manner as to separate the two functions to reduce potential conflicts, that is using both smooth and cobbled pavement surfaces to distinguish between bike and pedestrian ways. The construction of the bridge should be an integral part of the pedestrian, circulation and shopping environment.
- f. Buildings in the core area should have a unified architectural theme and site design, pedestrian access, bicycle and automobile circulation, and public open spaces. Perspectives of the proposed project that show the relationship of the proposed project to adjacent development should be submitted as part of the permit application.
- g. Mexican fan palm trees should be used as a theme street tree in the Community Core, interspersed with broad-headed flowering trees.

Figure 13 Existing Land Uses in the Community Core

No change

Figure 14 Community Core Recommendations

No change

Figure 15 Design Features in the Core Area

No change

43. Parking Design

- a. Parking in the community core should be underground, behind the building or within the building. If parking is located on the first and second levels of the building, automobiles should be screened from the public right-of-way with landscaping, and the facade of the parking structure should be sensitive to the pedestrian environment. The automobile or parking facilities should not be a dominant element of the community core.
- b. Joint parking should be permitted to reduce space used for parking, provided that a parking study identifies what specific parking reductions are proposed, and how such reductions will not adversely affect required levels of available parking spaces. Examples of subjects to be analyzed in the parking study include: existing and proposed land uses; scheduling of business hours; secure bicycle storage facilities for both customer and employees, and, proximity to public transit.
- c. Large surface parking areas should be broken up with landscaped islands and screened from the public right-of-way by landscaping. This can be accomplished through the use of trees, shrubs or mounding, where appropriate, to enhance the visual character of the core area. Large parking areas should also include colored concrete paving (instead of asphalt) as a means to visually enhance surface areas.

54. Circulation

The estimated redevelopment potential of the community core is an additional 119,321 square feet of retail and 31,000 square feet of commercial. If new development exceeds the estimated redevelopment potential of the community core, a traffic study should be submitted in order to mitigate any potential traffic impacts to Balboa Avenue and Genesee Avenue.

RECOMMENDATIONS FOR CLAIREMONT SQUARE AND CLAIREMONT VILLAGE – CPIOZ

The Community Plan Implementation Overlay Zone, Type B with a Planned Commercial Development permit should apply to Clairemont Square and Clairemont Village in order to ensure that redevelopment will be compatible with the surrounding neighborhoods (**Figure 38**). Development under the existing CA Zone did not provide pedestrian walkways linking the centers to adjacent residential neighborhoods. The centers have many signs, and some of these signs are either too high or too large according to the citywide Sign Ordinance. The internal automobile and bicycle circulation system and transit stops are also not well defined in the centers. As redevelopment occurs with CPIOZ, emphasis should also be placed on creating a pleasant and convenient shopping environment for residents in Clairemont Mesa.

1. Use

Clairemont Square and Clairemont Village should be retained as community commercial centers.

2. Site Design

Any new retail development should be integrated with the existing center to ensure compatibility in height, architecture and site design, signs, landscaping and circulation. New development should be linked to the surrounding residential neighborhood by safe and effective pedestrian access through well-defined entryways.

- a. When adjacent to a residential area, the commercial development should be linked to the neighborhood with landscaping or architectural design so a transition is made.
- b. Commercial development should be connected to surrounding residential areas by pedestrian access between the public right-of-way and the internal pedestrian walkways of the center.
- c. Commercial development in the centers should participate in the landscaping improvements along Clairemont Mesa Boulevard and Clairemont Drive (see **Transportation Element**).

RECOMMENDATIONS FOR THE DIANE SHOPPING CENTER – CPIOZ

The Diane Shopping Center should be rezoned to CN with a Community Plan Implementation Overlay Zone, Type B. New development may occur only under a Planned Commercial Development permit in order to ensure that any commercial redevelopment in this center will be compatible with the surrounding neighborhoods (**Figure 38**). The CPIOZ will also ensure that this center will not be redeveloped with residential uses, thereby eliminating it as a commercial center. The CN Zone alone permits residential uses to occur on the site and does not require a discretionary permit, which gives the community and the city the opportunity to review the design of the center for neighborhood compatibility.

1. Restriction on Residential Uses

The Diane Shopping Center should be preserved as a neighborhood shopping center. Therefore, no residential uses should be permitted to locate in the center.

2. Architectural and Site Design

All new development should be integrated with the existing center in terms of height, architecture, signs, landscaping and circulation. New development should be linked to the

surrounding neighborhoods by safe and effective pedestrian access through well- defined entryways.

- a. Any new development located adjacent to Conrad Avenue or Diane Avenue should provide entrances to establishments from those streets as well as from the shopping center.
- b. Landscaping should be provided along Conrad Avenue and Diane Avenue as part of any redevelopment of the site.
- c. All service and loading areas that are visible from the public right-of-way or from adjacent residences, should be screened by fencing, landscaping, or a combination of both.

RECOMMENDATIONS FOR THE WEST CLAIREMONT PLAZA– CPIOZ

The Community Plan Implementation Overlay Zone, Type B, should apply to the West Clairemont Plaza Shopping Center to ensure that redevelopment of the site is compatible with adjacent residential development, supports use of the Mid-Coast transit line, enhances the community image, and offers commercial services that are walkable to the surrounding community. The site should be developed with a first class retail and professional center. The existing center is characterized by older structures, underutilized parking areas, poor landscaping, and a lack of walkways to and from residential neighborhoods and throughout the site. Transit services are poorly integrated into the site.

1. Use

Retail and commercial services should be encouraged on the site. Professional offices are also permitted. Residential uses may be permitted on the eastern and southern portions of the lot and above the ground floor throughout the site.

2. Architecture and Site Design

Development should occur with a unifying architectural, signage and landscaping theme and comprehensive pedestrian and bicycle pathways.

- a. Development should capitalize on the site’s topography. The rise in elevation should be used to provide below-grade parking, capture views, and reduce apparent building mass. Buildings should terrace down from the slope. Great sensitivity should be exercised to minimize view obstruction. Building height is limited to 30 feet.
- b. Pedestrian amenities such as landscaping and wide sidewalks (eight to ten feet wide) should be provided along the Clairemont Drive edge. This street segment should link the Clairemont Community to Mission Bay park through improved pedestrian access and a landscaping theme that visually relates to Mission Bay park.

- c. Development along the Morena Boulevard frontage should be pedestrian-friendly, with building entrances and windows oriented to the street. A direct pedestrian connection should be made to the future trolley station. Landscaping should link the shopping center with the transit station.
- d. The Ingulf Street side shall be developed with sensitivity to the residential areas to the south, minimizing noise impacts and street parking conflicts. Any vehicular entrance on this side should be located between Morena Boulevard and Chicago Street.

3. Transportation Improvements

- a. Provide clear access points to the shopping center. The primary vehicular access should be from Clairemont Drive. Consolidate curb cuts.
- b. Pedestrian pathways should occur throughout the site. The pathways should be landscaped and protected from vehicular interference.

RECOMMENDATIONS FOR NEIGHBORHOOD COMMERCIAL CENTERS

1. Rezone

Rezone the two centers on the corner of Clairemont Mesa Boulevard and Limerick Avenue and Clairemont Mesa Boulevard and Diane Avenue from CA to CN in order to assure the continuance of commercial services at the neighborhood level (**Figure 38**).

2. Use

Any proposed residential development in neighborhood commercial areas should occur under Planned Commercial Development Permit in order to ensure that commercial services will be provided at the neighborhood level.

- a. Commercial development should be required on the ground floor with any residential uses on the second level of a mixed-use development.
- b. Mixed-use developments should not exceed a density of 29 dwelling units per net residential acre.

3. Design

When adjacent to a residential area, the commercial development should be buffered by a non-transparent fence or wall with landscaping or architectural/site design so a transition is made.

4. Runoff

Any development along a canyon rim should direct runoff away from the canyon. If runoff must be directed into the canyon, erosion and runoff control measures should be employed (see **Residential** and **Open Space Elements**).

RECOMMENDATIONS FOR OTHER COMMERCIAL AREAS

1. Rezone

The area north of Savannah Street and west of Tecolote Road (referred to as the Tecolote Gateway area) should be rezoned from C, R-400 and M-1A to C-1 in order to be consistent with existing land uses and have improved parking and landscaping standards (**Figures 19 and 38**). The C-1 Zone permits a wide range of consumer goods and services and limited wholesaling and warehousing.

2. Rezone

Rezone the two areas along Clairemont Mesa Boulevard from I-805 to Doliva Drive from CA and CR to CV or an equivalent zone (**Figure 38**). These areas provide existing commercial facilities such as motels, restaurants and other visitor uses, visible from I-805. New development should submit a Planned Commercial Development (PCD) permit in order to provide support uses such as restaurants and recreational facilities.

3. Rezone

Rezone the duplexes on Clairemont Drive, south of Balboa Avenue from R-3000 to CO in order to be consistent with surrounding commercial development (**Figure 38**). The site should redevelop with offices, because the area is close to Balboa Avenue with good access from Clairemont Drive. On-street parking is available on Clairemont Drive and Modoc Avenue.

RECOMMENDATIONS FOR SERVICE STATIONS

1. Location

Service stations should be permitted only in areas identified for commercial development (**Figure 38**). A Conditional Use Permit is required to develop or expand gasoline stations. The maximum number of service stations permitted at an intersection should be two, located on diagonal corners in order to provide maximum service to the community, minimize circulation conflicts and to provide diversity, interest and aesthetic entryways at major intersections in the community.

2. Access

When a service station is located adjacent to a commercial center, direct access from that center to the gasoline station should be provided in order to minimize additional circulation conflicts on the street.

3. Landscaping

- a. Landscaped buffers should be provided along each street frontage adjacent to the public right-of-way. Landscaping should be consistent with citywide landscaping guidelines.
- b. Stations adjacent to residential development should provide a landscaped strip and a decorative wall adjacent to the residential development.

RECOMMENDATIONS FOR FAST FOOD RESTAURANTS

1. Location

Fast food drive-in restaurants should be permitted only in retail areas where such restaurants are compatible with surrounding uses and will not impede circulation on public streets.

2. Access and Circulation

- a. Curb cuts should be minimized to eliminate interference with pedestrian movement and on-street parking.
- b. When fast food restaurants are adjacent to commercial centers, direct access from that center should be provided, in order to minimize circulation conflicts on the street.

RECOMMENDATIONS FOR SIGNS

1. Location

- a. Signs for various businesses in any shopping center should be clustered upon a directory sign near the main entryway(s) to the center.
- b. In shopping centers, those businesses that are located near the street and are visible from the public right-of-way should only be permitted wall signs.

2. Discretionary Review

A Comprehensive Sign Program (CSP) should be submitted as part of the development review process to integrate signs into the projects. A CSP will help to consolidate signs in commercial areas.

- a. Signs should be well maintained and designed with respect for the scale and character of the street and surrounding development in order to enhance the overall quality of commercial areas. This can be accomplished with low-profile ground signs, wall signs and projecting signs that should be in scale with pedestrians.
- b. Signs should be integrated into the design of the building and constructed of similar materials.
- c. Lettering and color of signs should have uniformity throughout the project in order to reduce visual clutter.

Appendix C
**Planning Commission
Resolution**

PLANNING COMMISSION RESOLUTION NO. 4979-PC

INITIATING AN GENERAL/COMMUNITY PLAN AMENDMENT TO THE CLAIREMONT MESA COMMUNITY PLAN TO REDESIGNATE A 4.09-ACRE SITE LOCATED AT 5255 MOUNT ETNA DRIVE FROM COMMERCIAL-COMMUNITY CENTER TO RESIDENTIAL-HIGH 45 TO 73 DWELLING UNITS PER ACRE, AMEND THE COMMUNITY PLAN IMPLEMENTATION OVERLAY ZONE (CPIOZ) FROM CPIOZ TYPE B TO CPIOZ TYPE A TO ALLOW RESIDENTIAL USE ON SITE, AND PROVIDE SITE DESIGN STANDARDS FOR THE SITE, AND REZONE FROM CO-1-2 TO RM-3-9.

WHEREAS, on December 6, 2018, the Planning Commission of the City of San Diego held a public hearing to consider the initiation of a General/Community Plan Amendment to the Clairemont Mesa Community Plan; and

WHEREAS, the applicants requested a Community Plan in anticipation of future development that will allow additional affordable residential housing units on the subject property; and

WHEREAS, the Planning Commission of the City of San Diego considered all maps, exhibits, evidence and testimony; NOW THEREFORE;

BE IT RESOLVED, by the Planning Commission of the City of San Diego that it hereby initiates the requested community plan amendment; and

BE IT FURTHER RESOLVED that the Planning Commission directs staff to consider the following issues identified in Planning Report No. PC-18-066:

- Analysis of impact of potential residential development on public services and facilities
- Analysis of traffic impacts associated with increased density
- Analysis of bulk and scale simulations in relationship to the adjacent buildings surrounding the neighborhood
- Analysis of potential setbacks and stepbacks, shadow effects, and development of design guidelines
- Ability to incorporate commercial on site
- Incorporation of a robust public outreach process as part of the Community Plan Amendment process

BE IT FURTHER RESOLVED, that this initiation does not constitute an endorsement of a project proposal. This action will allow staff analysis to proceed.

Marlon I. Pangilinan

Mt. Etna Community Plan Amendment and Rezone Project - Statewide , Summer

**Mt. Etna Community Plan Amendment and Rezone Project
Statewide , Summer**

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	0.00	Space	0.00	0.00	0
Parking Lot	404.00	Space	1.21	161,600.00	0
Apartments Mid Rise	404.00	Dwelling Unit	2.88	404,000.00	1281

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	7			Operational Year	2022
Utility Company	San Diego Gas & Electric				
CO2 Intensity (lb/MW/hr)	720.49	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Adjusted windspeed andprecipitation for SD APCD

Land Use - Acreage adjusted for site area

Construction Phase - Based on client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Trips and VMT - Based on truck size of 12 CY provided by client

Demolition -

Grading - Client given inputs

Architectural Coating - See construction assumptions

Energy Use -

Construction Off-road Equipment Mitigation - Tier 4 Final Mitigation

3.1 Mitigation Measures Construction

- Use Cleaner Engines for Construction Equipment
- Use Soil Stabilizer
- Water Exposed Area
- Reduce Vehicle Speed on Unpaved Roads

3.2 Demolition - 2021

Unmitigated Construction On-Site

Mt. Etna Community Plan Amendment and Rezone Project - Statewide , Winter

Mt. Etna Community Plan Amendment and Rezone Project Statewide , Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	0.00	Space	0.00	0.00	0
Parking Lot	404.00	Space	1.21	161,600.00	0
Apartments Mid Rise	404.00	Dwelling Unit	2.88	404,000.00	1281

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	7			Operational Year	2022

Utility Company San Diego Gas & Electric

CO2 Intensity (lb/MW/hr)	720.49	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006
--------------------------	--------	--------------------------	-------	--------------------------	-------

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Adjusted windspeed and precipitation for SD APCD

Land Use - Acreage adjusted for site area

Construction Phase - Based on client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs

Off-road Equipment - Client given inputs
 Off-road Equipment - Client given inputs
 Trips and VMT - Based on truck size of 12 CY provided by client
 Demolition -
 Grading - Client given inputs
 Architectural Coating - See construction assumptions
 Energy Use -
 Construction Off-road Equipment Mitigation - Tier 4 Final Mitigation

Mt. Etna Community Plan Amendment and Rezone Project - Statewide , Annual

**Mt. Etna Community Plan Amendment and Rezone Project
Statewide , Annual**

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	0.00	Space	0.00	0.00	0
Parking Lot	404.00	Space	1.21	161,600.00	0
Apartments Mid Rise	404.00	Dwelling Unit	2.88	404,000.00	1281

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.6	Precipitation Freq (Days)	40
Climate Zone	7			Operational Year	2022

Utility Company San Diego Gas & Electric

CO2 Intensity (lb/MW/hr)	720.49	CH4 Intensity (lb/MW/hr)	0.029	N2O Intensity (lb/MW/hr)	0.006
---------------------------------	--------	---------------------------------	-------	---------------------------------	-------

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Changed for SD County

Land Use - Client given inputs

Vehicle Trips - Taken from TIA prepared by Chen+Ryan

Vehicle Emission Factors - EMFAC2017 Factors

Woodstoves - No wood fireplaces

Area Coating -

Energy Use -

Area Mitigation -

Water Mitigation -

Waste Mitigation - Based on SD Zero Waste Plan goal of 75% diversion by 2020

Fleet Mix - EMFAC2017 fleet mix

Mt. Etna Community Plan Amendment and Rezone Project Construction Health Risk Summary

Sensitive Receptor	Maximum Cancer Risk (# in one million) ^a	Chronic Risk Hazard Index (HI) ^b
<i>Unmitigated</i>		
Residential Land Use	14.28	0.03
School	0.47	0.01
Significance Threshold	10	1
Exceeds Threshold?	Yes	No
<i>Mitigated</i>		
Residential Land Use	3.1	0.007
School	0.1	0.001
Significance Threshold	10	1
Exceeds Threshold?	No	No

a. Cancer risk values based on actual exposure over the duration of construction activities. The Construction risk was calculated assuming a child was born at the beginning of the project construction, and would be exposed during the duration of construction activities. The third trimester exposure was excluded as construction is anticipated to take less than two years and exposure from birth to two years results in greater cancer risk, therefore excluding the third trimester exposure results in a more conservative risk analysis.

b. Chronic risk HI values based on the annual maximum levels of DPM divided by the corresponding DPM reference exposure levels (RELS).

Source: See HRA Detailed Calculations
